Listing and Technical Evaluation Report™

A Duly Authenticated Report from an Approved Agency

Report No: 1811-03

Issue Date: June 14, 2019

Revision Date: June 27, 2025

Subject to Renewal: July 1, 2026

QuickTie™ U-Hanger Series Face Mount and Top Flange Mount Joist Hangers

Trade Secret Report Holder:

QuickTie™ Products, Inc.

Phone: 904-281-0525 Website: quicktieproducts.com

CSI Designations:

DIVISION: 06 00 00 - WOOD, PLASTICS AND COMPOSITES Section: 06 05 23 - Wood, Plastic, and Composite Fastenings

1 Innovative Products Evaluated[1]

1.1 QuickTie U-Hanger Series:

- 1.1.1 UL Series – 20-gauge
- 1.1.2 ULU Series – 20-gauge
- 1.1.3 ULP and ULP-IF (Inverted Flange) Series – 18-gauge
- 1.1.4 ULPSSH Series (Slopeable and Skewable) – 18-gauge
- 1.1.5 UM Series – 16-gauge
- 1.1.6 UMH Series – 16-gauge
- 1.1.7 UMSR-L – 16-gauge
- 1.1.8 UHSR-L - 14-gauge
- 1.1.9 UH and UH-IF (Inverted Flange) Series – 14-gauge
- 1.1.10 UHH Series – 14-gauge
- 1.1.11 UHD Series – 12-gauge
- 1.1.12 THJH Series – 12-gauge
- 1.1.13 TSH Series – 18-gauge, 16-gauge, and 14-gauge
- 1.1.14 TFLP (Top Flange) Series – 18-gauge
- 1.1.15 TFH (Top Flange) Series – 14-gauge

2 Product Description and Materials

2.1 The innovative products evaluated in this report are shown in **Figure 1**.

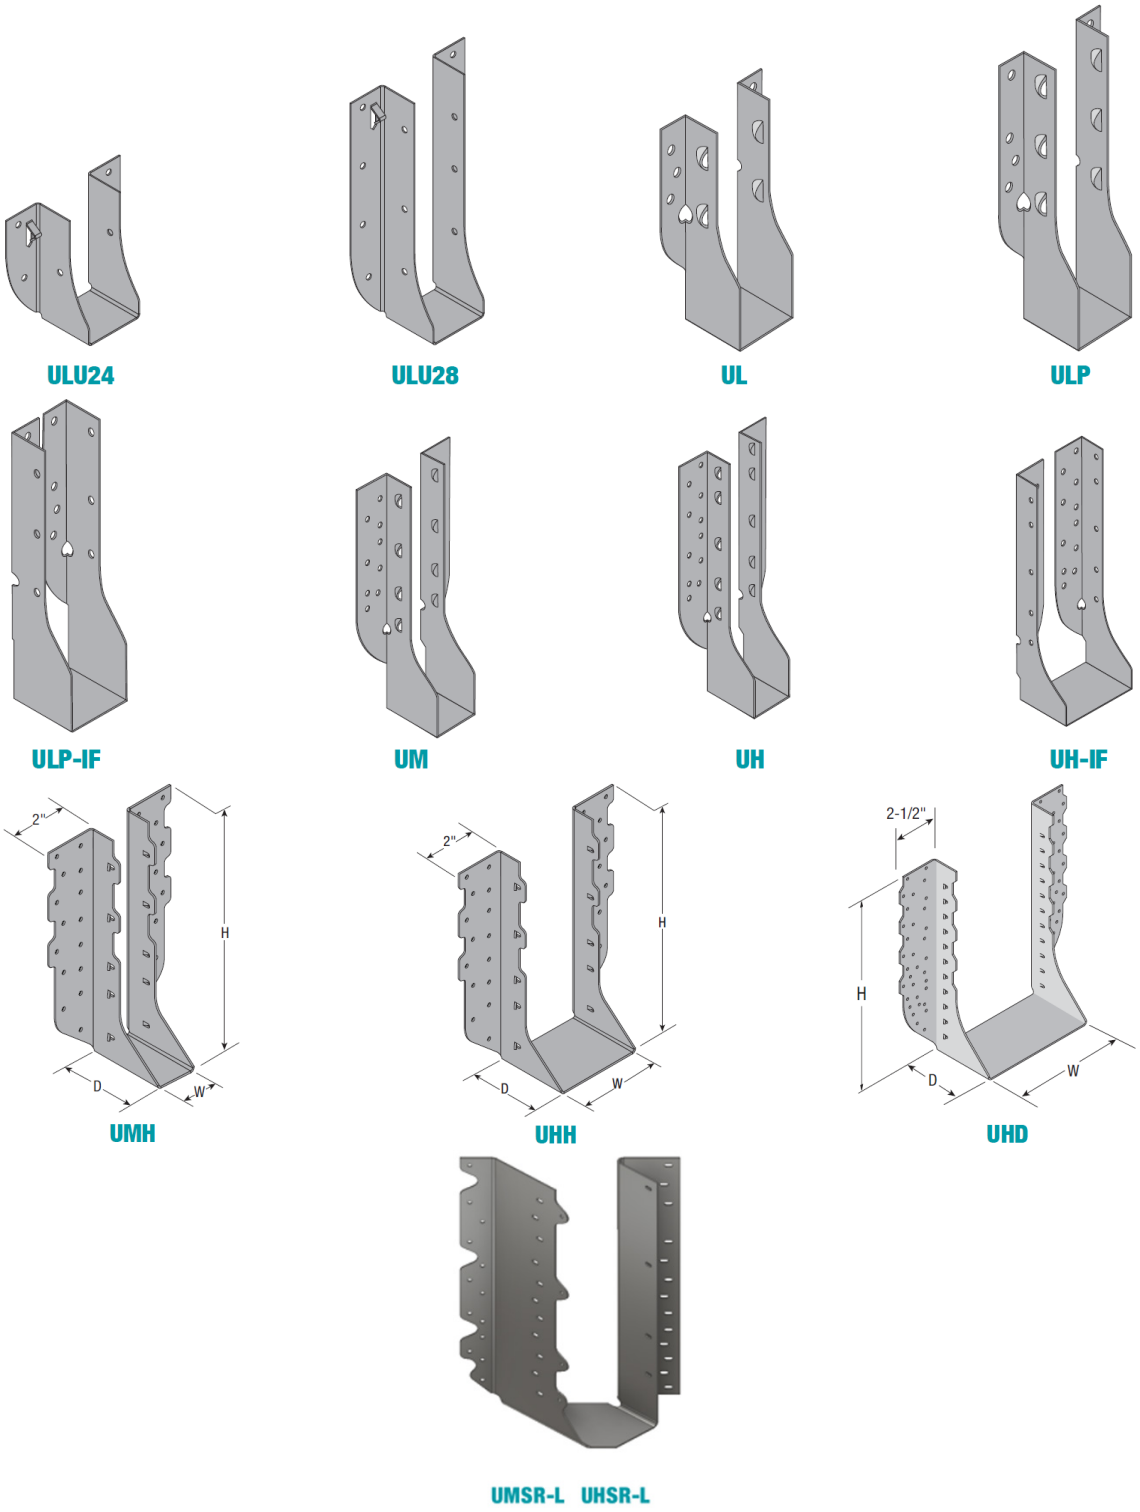

Figure 1. QuickTie U-Hanger Series

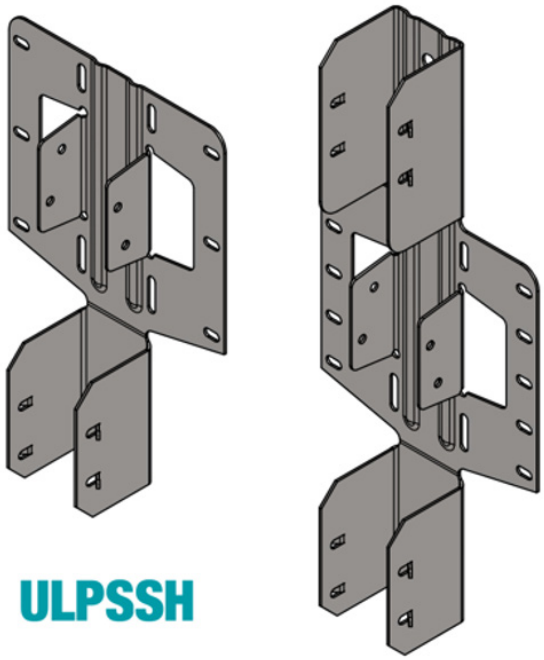

Figure 2. QuickTie U-Hanger Series – Continued

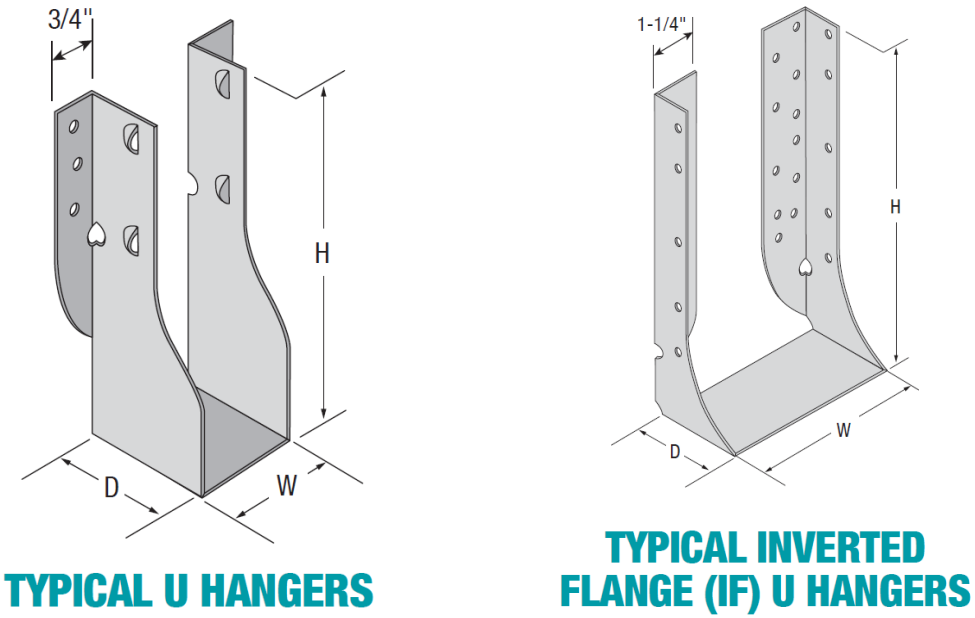

Figure 3. Typical Hanger Configuration

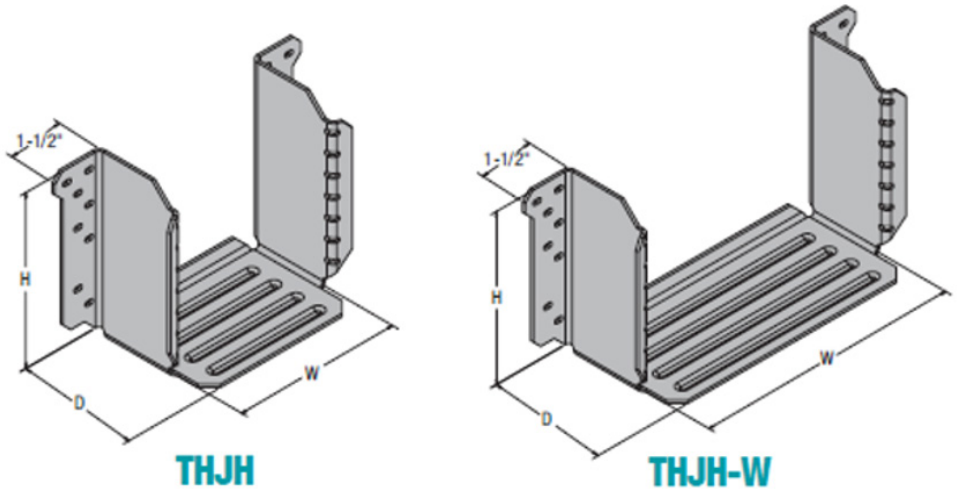

Figure 4. THJH26 and THJH26-W Hangers

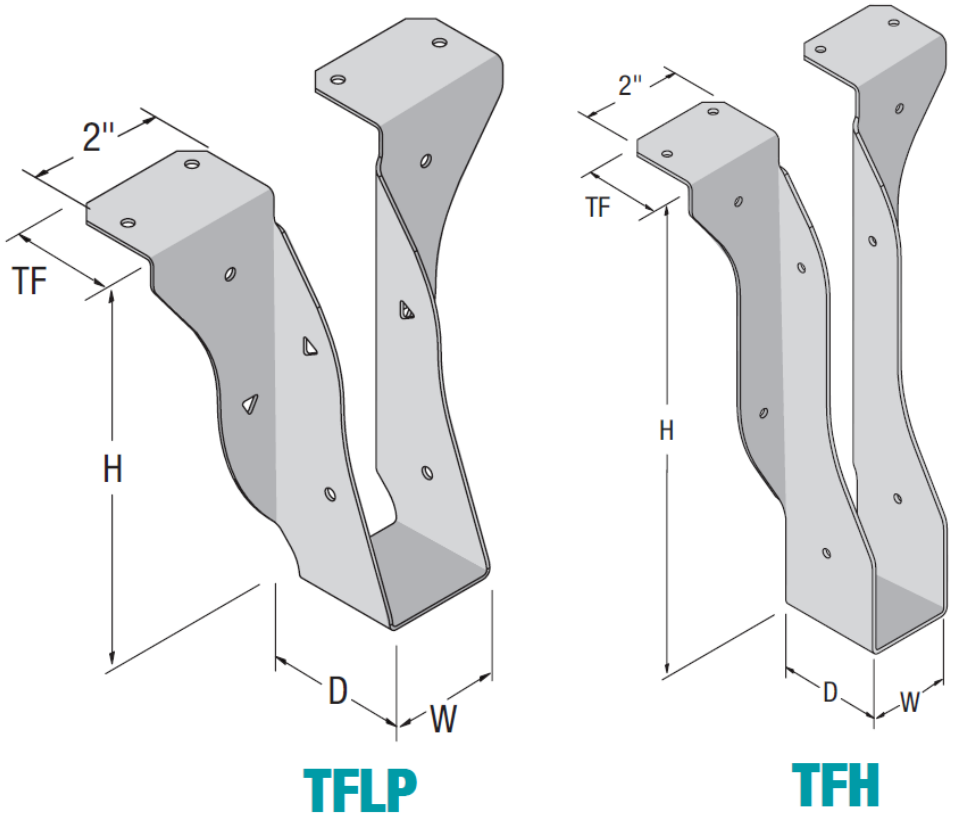

Figure 5. Top Flange TFLP and TFH Hangers

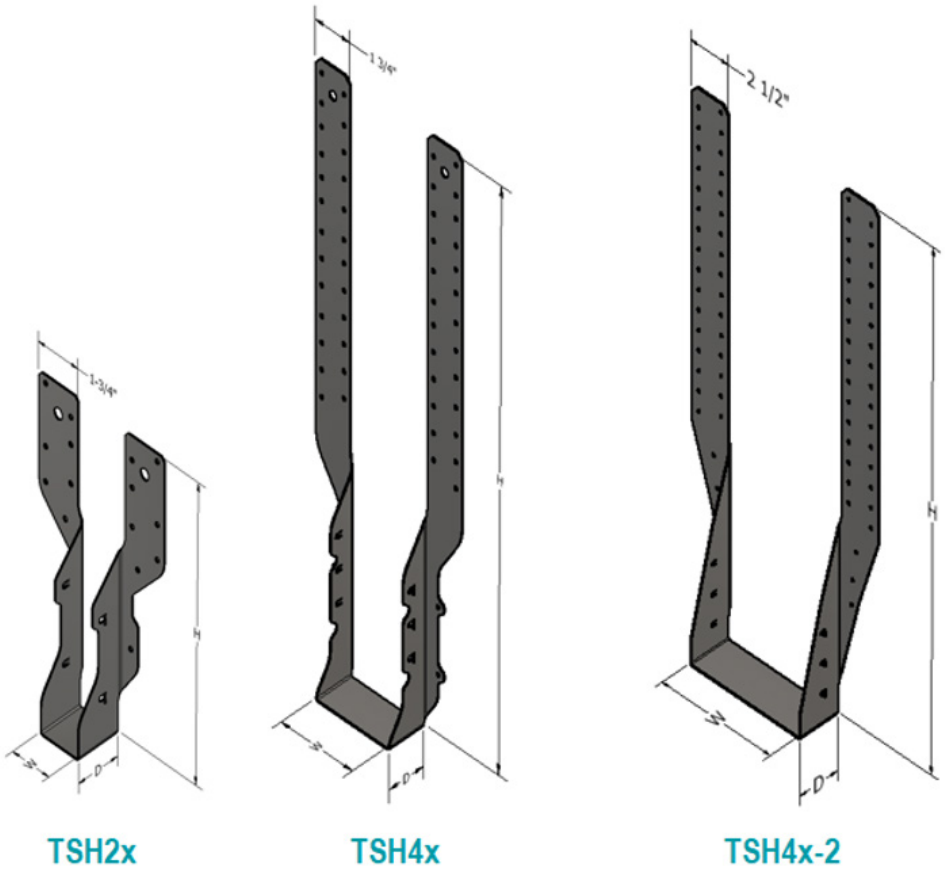

Figure 6. TSH Hangers

2.1.1 QuickTie U-Hanger Series Face Mount and Top Flange Mount Joist Hangers are manufactured from minimum ASTM A653, Structural Steel (SS), Grade 40 (F_u = 55 ksi, F_y = 40 ksi) steel galvanized with a G90 or better zinc coating, with the exception of the following:

2.1.1.1 ULP24, ULP24-2, ULPSSH Series, ULU Series, UMH Series, UMSR-L, UHSR-L, UHH Series, UHD Series, THJH Series, TSH Series, and TFH Series hangers are manufactured from minimum ASTM A653, SS Grade 50 (F_u = 70 ksi, F_y = 50 ksi) steel galvanized with a G90 or better zinc coating.

2.1.2 The QuickTie U-Hanger Series are designated as follows:

2.1.2.1 UL Series – 20-gauge (minimum coated thickness = 0.0356")

2.1.2.2 ULU Series – 20-gauge (minimum coated thickness = 0.0356")

2.1.2.3 ULP and ULP-IF Series – 18-gauge (minimum coated thickness = 0.0466")

2.1.2.4 ULPSSH Series – 18-gauge (minimum coated thickness = 0.0466")

2.1.2.5 UM Series – 16-gauge (minimum coated thickness = 0.0575")

2.1.2.6 UMH Series – 16-gauge (minimum coated thickness = 0.0575")

2.1.2.7 UMSR-L Series – 16-gauge (minimum coated thickness = 0.0575")

2.1.2.8 UHSR-L Series – 14-gauge (minimum coated thickness = 0.0705")

2.1.2.9 UH and UH-IF Series – 14-gauge (minimum coated thickness = 0.0705")

2.1.2.10 UHH Series – 14-gauge (minimum coated thickness = 0.0705")

2.1.2.11 UHD Series – 12-gauge (minimum coated thickness = 0.0994")

2.1.2.12 THJH26 and THJH26-W – 12-gauge (minimum coated thickness = 0.0994")

2.1.2.13 TSH29, TSH213, TSH218, and TSH413 – 18-gauge (minimum coated thickness = 0.0466")

2.1.2.14 TSH218-2, TSH222-2, TSH418, and TSH422– 16-gauge (minimum coated thickness = 0.0575")

2.1.2.15 TSH426, TSH422-2, and TSH426-2– 14-gauge (minimum coated thickness = 0.0705")

2.1.2.16 TFLP26 and TFLP28 – 18-gauge (minimum coated thickness = 0.0466")

2.1.2.17 TFH210 and TFH214 – 14-gauge (minimum coated thickness = 0.0705")

2.2 As needed, review material properties for design in **Section 6** and the regulatory evaluation in **Section 8**.

3 Definitions[2]

3.1 New Materials[3] are defined as building materials, equipment, appliances, systems, or methods of construction, not provided for by prescriptive and/or legislatively adopted regulations, known as alternative materials.[4] The design strength and permissible stresses shall be established by tests[5] and/or engineering analysis.[6]

3.2 Duly authenticated reports[7] and research reports[8] are test reports and related engineering evaluations that are written by an approved agency[9] and/or an approved source.[10]

3.2.1 These reports utilize intellectual property and/or trade secrets to create public domain material properties for commercial end-use.

3.2.1.1 This report protects confidential Intellectual Property and trade secretes under the regulation, 18.US.Code.90, also known as Defend Trade Secrets Act of 2016 (DTSA).[11]

3.3 An approved agency is *"approved"* when it is ANAB ISO/IEC 17065 accredited. DrJ Engineering, LLC (DrJ) is accredited and listed in the ANAB directory.

3.4 An approved source is *"approved"* when a professional engineer (i.e., Registered Design Professional, hereinafter RDP) is properly licensed to transact engineering commerce. The regulatory authority governing approved sources is the state legislature via its professional engineering regulations.[12]

3.5 Testing and/or inspections conducted for this duly authenticated report were performed by an ISO/IEC 17025 accredited testing laboratory, an ISO/IEC 17020 accredited inspection body, and/or a licensed RDP.

3.5.1 The Center for Building Innovation (CBI) is ANAB[13] ISO/IEC 17025 and ISO/IEC 17020 accredited.

3.6 The regulatory authority shall enforce[14] the specific provisions of each legislatively adopted regulation. If there is a non-conformance, the specific regulatory section and language of the non-conformance shall be provided in writing[15] stating the nonconformance and the path to its cure.

3.7 The regulatory authority shall accept duly authenticated reports from an approved agency and/or an approved source with respect to the quality and manner of use of new materials or assemblies as provided for in regulations regarding the use of alternative materials, designs, or methods of construction.[16]

3.8 ANAB is an International Accreditation Forum (IAF) Multilateral Recognition Arrangement (MLA) signatory. Therefore, recognition of certificates and validation statements issued by conformity assessment bodies accredited by all other signatories of the IAF MLA with the appropriate scope shall be approved.[17] Thus, all ANAB ISO/IEC 17065 duly authenticated reports are approval equivalent,[18] and can be used in any country that is an MLA signatory found at this link: https://iaf.nu/en/recognised-abs/

3.9 Approval equity is a fundamental commercial and legal principle.[19]

4 Applicable Local, State, and Federal Approvals; Standards; Regulations[20]

4.1 *Local, State, and Federal*

4.1.1 Approved in all local jurisdictions pursuant to ISO/IEC 17065 duly authenticated report use, which includes the following featured local jurisdictions and is not limited to: Austin, Baltimore, Broward County, Chicago, Clark County, Dade County, Dallas, Detroit, Denver, DuPage County, Fort Worth, Houston, Kansas City, King County, Knoxville, Las Vegas, Los Angeles City, Los Angeles County, Miami, Nashville, New York City, Omaha, Philadelphia, Phoenix, Portland, San Antonio, San Diego, San Jose, San Francisco, Seattle, Sioux Falls, South Holland, Texas Department of Insurance, and Wichita.[21]

4.1.2 Approved in all state jurisdictions pursuant to ISO/IEC 17065 duly authenticated report use, which includes the following featured states, and is not limited to: California, Florida, New Jersey, Oregon, New York, Texas, Washington, and Wisconsin.[22]

4.1.3 Approved by the Code of Federal Regulations Manufactured Home Construction: Pursuant to Title 24, Subtitle B, Chapter XX, Part 3282.14[23] and Part 3280[24] pursuant to the use of ISO/IEC 17065 duly authenticated reports.

4.1.4 Approved means complying with the requirements of local, state, or federal legislation.

4.2 *Standards*

4.2.1 *AISI S100: North American Specification for the Design of Cold-formed Steel Structural Members*

4.2.2 *ANSI/AISC 360: Specification for Structural Steel Buildings*

4.2.3 *ANSI/AWC NDS: National Design Specification (NDS) for Wood Construction*

4.2.4 *ASTM A370: Standard Test Methods and Definitions for Mechanical Testing of Steel Products*

4.2.5 *ASTM A653: Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process*

4.2.6 *ASTM D7147: Standard Specification for Testing and Establishing Allowable Loads of Joist Hangers*

4.2.7 *ASTM F1575: Standard Test Method for Determining Bending Yield Moment of Nails*

4.3 *Regulations*

4.3.1 *IBC – 15, 18, 21, 24: International Building Code®*

4.3.2 *IRC – 15, 18, 21, 24: International Residential Code®*

4.3.3 *FBC-B – 20, 23: Florida Building Code – Building (FL 3557)*

4.3.4 *FBC-R – 20, 23: Florida Building Code – Residential (FL 3557)*

4.3.5 *NCBC – 12, 18: North Caroline Building Code*

5 Listed[25]

5.1 Equipment, materials, products, or services included in a List published by a nationally recognized testing laboratory (i.e., CBI), an approved agency (i.e., CBI and DrJ), and/or and approved source (i.e., DrJ), or other organization(s) concerned with product evaluation (i.e., DrJ), that maintains periodic inspection (i.e., CBI) of production of listed equipment or materials, and whose listing states either that the equipment or material meets nationally recognized standards or has been tested and found suitable for use in a specified manner.

6 Tabulated Properties Generated from Nationally Recognized Standards

6.1 *General*

6.1.1 QuickTie U-Hanger Series Face Mount and Top Flange Mount Joist Hangers are used to resist gravity loads and uplift loads due to wind in one-ply, two-ply, and three-ply joist assemblies in light-frame wood construction.

6.1.2 QuickTie U-Hanger Series Face Mount and Top Flange Mount Joist Hangers are used as wood framing connectors in accordance with IBC Section 2304.10.4[26] and IRC Section R301.1.3.

6.2 *Hanger Design Values*

6.2.1 **Table 2** through **Table 15** give the allowable gravity and uplift loads for U-Hanger connectors with single ply and multi-ply nominal lumber joists.

6.2.2 **Table 16** through **Table 18** give the allowable gravity and uplift loads for top and face mounted joist hangers with single-ply and multi-ply lumber trusses/rafters/joists.

6.2.3 The design values in **Table 2** through **Table 18** were derived using the applicable adjustment factors in ASTM D7147 per IBC Section 2303.5.

6.2.4 The responsible design professional for the project shall determine which type of U-Hanger is appropriate using **Table 2** through **Table 18**.

6.2.5 *Allowable Load Adjustment Factors for Nail Substitution:*

6.2.5.1 For situations where a different nail size is used for the installation of the face-mount hangers than what is stated in their respective tables in this section, adjustment factors are provided in **Table 1**.

6.2.5.1.1 These reduction factors shall be applied to the allowable loads listed for the product.

Table 1. Allowable Load Adjustment Factors for Optional Nails[1,2,3,4,5,6,7]

Connector Table Fastener	Replacement Fastener	Load Adjustment Factor		
		Single Shear Connection	Double Shear Connection	
		Gravity/Uplift	Gravity	Uplift
0.131" x 1½"	0.131" x 2½"	1.00	N/A	N/A
	0.148" x 1¼"	1.00	N/A	N/A

	0.148" x 1½"	0.86	N/A	N/A
	0.148" x 2½"	0.86	0.67	0.67
	0.148" x 3¼"	0.86	0.83	0.83
	0.162" x 2½"	1.00	0.77	0.77

SI: 1 in = 25.4 mm

1. Allowable load adjustment factors shown in the table are applicable to all products specified in this table, except as noted in the footnotes below.
2. Some products have been tested specifically with alternative fasteners and have allowable load adjustment factors or reduced capacities published in Report Number 1811-03 or quicktieproducts.com. Values published therein may be used in lieu of using this table.
3. This table does not apply to skewed hangers or to hangers modified per allowed options, or to connectors made from steel thicker than 10-gauge.
4. Screws shall not be substituted for nails.
5. Nails and screws may not be combined in the same connection.
6. For straps installed over ⅝" maximum wood structural panel sheathing, use a 2½" long fastener minimum.
7. Nails that are 1½" long fasteners may be substituted for the specified fastener into the header only; double-shear fasteners shall be minimum 2½" long.

6.3 *Table Notes*

6.3.1 The following notes apply to **Table 2** through **Table 18**:

6.3.1.1 All U-Hangers have slant nailing. All nails must be driven at an angle (approximately 41°) in the joist and into the header to achieve published load values.

6.3.1.2 Nails designated as 16d shall be 16d common nails (0.162" x 3.5", F_{yb} = 90,000 psi) and 10d shall be 10d common nails (0.148" x 3", F_{yb} = 90,000 psi), unless otherwise noted in these tables.

6.3.1.3 Allowable loads are provided for load duration factors (C_D) of 1.0, 1.15, 1.25, and 1.6.

6.3.1.3.1 Uplift loads have been increased for wind/earthquake load duration (C_D = 1.6). No further increases permitted. Allowable uplift loads shall be reduced where other load conditions govern.

6.3.1.4 Allowable loads labeled *"Floor"* and *"Roof"* represent gravity loads.

6.3.1.5 **Figure 7** and **Figure 8** show the example of installation of typical U Hangers and Inverted Flange (IF) U Hangers.

6.3.1.6 **Figure 9** and **Figure 10** show the example of installation of sloped or sloped and skewed ULPSSH Hangers.

6.3.1.7 **Figure 11** shows the example of installation of THJH26 and THJH26-W Hangers.

6.3.1.8 **Figure 12** shows the example of installation of Top Flange Hangers.

6.3.1.9 **Figure 13** shows the examples of installation of TSH Hangers.

Table 2. UL Series Hangers – Allowable Gravity and Uplift Loads (lbf)[1]

Part No. UL Series (1,2, and 3-Ply Joists)	Joint Size (in)	Hanger Dimensions (in)			Steel Thick.	Fasteners				SP/DF-L (G = 0.50)				HF/SPF (G = 0.42)

1. See notes in **Section 6.3**.

6.4 Where the application falls outside of the performance evaluation, conditions of use, and/or installation requirements set forth herein, alternative techniques shall be permitted in accordance with accepted engineering practice and experience. This includes but is not limited to the following areas of engineering: mechanics or materials, structural, building science, and fire science.

7 Certified Performance[27]

7.1 All construction methods shall conform to accepted engineering practices to ensure durable, livable, and safe construction and shall demonstrate acceptable workmanship reflecting journeyman quality of work of the various trades.[28]

7.2 The strength and rigidity of the component parts and/or the integrated structure shall be determined by engineering analysis or by suitable load tests to simulate the actual loads and conditions of application that occur.[29]

8 Regulatory Evaluation and Accepted Engineering Practice

8.1 QuickTie U-Hanger Series complies with the following legislatively adopted regulations and/or accepted engineering practice for the following reasons:

8.1.1 QuickTie U-Hanger Series Face Mount and Top Flange Mount Joist Hangers were evaluated for the following:

8.1.1.1 Structural performance of connectors under uplift and gravity load conditions.

8.1.1.2 Performance for use in buildings of light-frame construction in accordance with the codes listed in **Section 4**.

8.2 Any building code, regulation and/or accepted engineering evaluations (i.e., research reports, duly authenticated reports, etc.) that are conducted for this Listing were performed by DrJ, which is an ISO/IEC 17065 accredited certification body and a professional engineering company operated by RDP or approved sources. DrJ is qualified[30] to practice product and regulatory compliance services within its scope of accreditation and engineering expertise,[31] respectively.

8.3 Engineering evaluations are conducted with DrJ's ANAB accredited ICS code scope of expertise, which is also its areas of professional engineering competence.

8.4 Any regulation specific issues not addressed in this section are outside the scope of this report.

9 Installation

9.1 Installation shall comply with the approved construction documents, the manufacturer installation instructions, this report, and the applicable building code.

9.2 In the event of a conflict between the manufacturer installation instructions and this report, contact the manufacturer for counsel on the proper installation method.

9.3 *Installation Procedure*

9.3.1 Hangers shall be attached to wood members with the appropriate quantity and size of fasteners, as shown in **Table 2** through **Table 18**.

9.3.2 A copy of the manufacturer published installation instructions shall be available at all times on the jobsite during installation.

9.3.3 Installation examples are shown in **Figure 7** through **Figure 13**.

10 Substantiating Data

10.1 Testing has been performed under the supervision of a professional engineer and/or under the requirements of ISO/IEC 17025 as follows:

10.1.1 Bending yield testing in accordance with ASTM F1575

10.1.2 Tensile strength testing in accordance with ASTM A370

10.1.3 Gravity and uplift load testing in accordance with ASTM D7147

10.2 Information contained herein may include the result of testing and/or data analysis by sources that are approved agencies, approved sources, and/or an RDP. Accuracy of external test data and resulting analysis is relied upon.

10.3 Where applicable, testing and/or engineering analysis are based upon provisions that have been codified into law through state or local adoption of regulations and standards. The developers of these regulations and standards are responsible for the reliability of published content. DrJ's engineering practice may use a regulation-adopted provision as the control. A regulation-endorsed control versus a simulation of the conditions of application to occur establishes a new material as being equivalent to the regulatory provision in terms of quality, strength, effectiveness, fire resistance, durability, and safety.

10.4 The accuracy of the provisions provided herein may be reliant upon the published properties of raw materials, which are defined by the grade mark, grade stamp, mill certificate, or duly authenticated reports from approved agencies and/or approved sources provided by the supplier. These are presumed to be minimum properties and relied upon to be accurate. The reliability of DrJ's engineering practice, as contained in this duly authenticated report, may be dependent upon published design properties by others.

10.5 *Testing and Engineering Analysis:*

10.5.1 The strength, rigidity, and/or general performance of component parts and/or the integrated structure are determined by suitable tests that simulate the actual conditions of application that occur and/or by accepted engineering practice and experience.[32]

10.6 Where additional condition of use and/or regulatory compliance information is required, please search for QuickTie U-Hanger Series on the DrJ Certification website.

11 Findings

11.1 As outlined in **Section 6**, the QuickTie U-Hanger Series have performance characteristics that were tested and/or meet applicable regulations. In addition, they are suitable for use pursuant to its specified purpose.

11.2 When used and installed in accordance with this duly authenticated report and the manufacturer installation instructions, QuickTie U-Hanger Series shall be approved for the following applications:

11.2.1 Use as described in this report in conformance to the codes listed in **Section 4**.

11.2.2 Where the design values listed in **Table 2** through **Table 18** meet the requirements of the building design.

11.3 Unless exempt by state statute, when the QuickTie U-Hanger Series is to be used as a structural and/or building envelope component in the design of a specific building, the design shall be performed by an RDP.

11.4 Any application specific issues not addressed herein can be engineered by an RDP. Assistance with engineering is available from QuickTie Products, Inc.

11.5 IBC Section 104.2.3[33] (IRC Section R104.2.2[34] and IFC Section 104.2.3[35] are similar) in pertinent part state:

> **104.2.3 Alternative Materials, Design and Methods of Construction and Equipment.** The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative is not specifically prohibited by this code and has been approved.

11.6 **Approved:**[36] Building regulations require that the building official shall accept duly authenticated reports.[37]

11.6.1 An approved agency is *"approved"* when it is ANAB ISO/IEC 17065 accredited.

11.6.2 An approved source is *"approved"* when an RDP is properly licensed to transact engineering commerce.

11.6.3 Federal law, Title 18 US Code Section 242, requires that, where the alternative product, material, service, design, assembly, and/or method of construction is not approved, the building official shall respond in writing, stating the reasons why the alternative was not approved. Denial without written reason deprives a protected right to free and fair competition in the marketplace.

11.7 DrJ is a licensed engineering company, employs licensed RDPs and is an ANAB Accredited Product Certification Body – Accreditation #1131.

11.8 Through the IAF Multilateral Arrangement (MLA), this duly authenticated report can be used to obtain product approval in any jurisdiction or country because all ANAB ISO/IEC 17065 duly authenticated reports are equivalent.[38]

12 Conditions of Use

12.1 Material properties shall not fall outside the boundaries defined in **Section 6**.

12.2 As defined in **Section 6**, where material and/or engineering mechanics properties are created for load resisting design purposes, the resistance to the applied load shall not exceed the ability of the defined properties to resist those loads using the principles of accepted engineering practice.

12.3 Calculations showing compliance with this report must be submitted to the code official. The calculations must be prepared by an RDP.

12.4 When required by adopted legislation and enforced by the building official, also known as the Authority Having Jurisdiction (AHJ) in which the project is to be constructed:

12.4.1 Any calculations incorporated into the construction documents shall conform to accepted engineering practice and, when prepared by an approved source, shall be approved when signed and sealed.

12.4.2 This report and the installation instructions shall be submitted at the time of permit application.

12.4.3 These innovative products have an internal quality control program and a third-party quality assurance program.

12.4.4 At a minimum, these innovative products shall be installed per **Section 9**.

12.4.5 The review of this report by the AHJ shall comply with IBC Section 104.2.3.2 and IBC Section 105.3.1.

12.4.6 These innovative products have an internal quality control program and a third party quality assurance program in accordance with IBC Section 104.7.2, IBC Section 110.4, IBC Section 1703, IRC Section R104.7.2, and IRC Section R109.2.

12.4.7 The application of these innovative products in the context of this report is dependent upon the accuracy of the construction documents, implementation of installation instructions, inspection as required by IBC Section 110.3, IRC Section R109.2, and any other regulatory requirements that may apply.

12.5 The approval of this report by the AHJ shall comply with IBC Section 1707.1, where legislation states in part, *"the building official shall make, or cause to be made, the necessary tests and investigations; or the building official shall accept duly authenticated reports from approved agencies in respect to the quality and manner of use of new materials or assemblies as provided for in Section 104.2.3"*, all of IBC Section 104, and IBC Section 105.3.

12.6 Design loads shall be determined in accordance with the regulations adopted by the jurisdiction in which the project is to be constructed and/or by the building designer (i.e., owner or RDP).

12.7 The actual design, suitability, and use of this report for any particular building, is the responsibility of the owner or the authorized agent of the owner.

13 Identification

13.1 The innovative products listed in **Section 1.1** are identified by a label on the board or packaging material bearing the manufacturer name, product name, this report number, and other information to confirm code compliance.

13.2 Additional technical information can be found at quicktieproducts.com.

14 Review Schedule

14.1 This report is subject to periodic review and revision. For the latest version, visit www.drjcertification.org.

Issue Date: July 1, 2021
Subject to Renewal: July 1, 2026

FBC Supplement to Report Number 1811-03

REPORT HOLDER: QuickTie™ Products, Inc.

1 Evaluation Subject

1.1 QuickTie U-Hanger Series:

1.1.1 UL Series – 20-gauge

1.1.2 ULU Series – 20-gauge

1.1.3 ULP and ULP-IF (Inverted Flange) Series – 18-gauge

1.1.4 ULPSSH Series (Slopeable and Skewable) – 18-gauge

1.1.5 UM Series – 16-gauge

1.1.6 UMH Series – 16-gauge

1.1.7 UMSR-L – 16-gauge

1.1.8 UHSR-L - 14-gauge

1.1.9 UH and UH-IF (Inverted Flange) Series – 14-gauge

1.1.10 UHH Series – 14-gauge

1.1.11 UHD Series – 12-gauge

1.1.12 THJH Series – 12-gauge

1.1.13 TSH Series – 18-gauge, 16-gauge, and 14-gauge

1.1.14 TFLP (Top Flange) Series – 18-gauge

1.1.15 TFH (Top Flange) Series – 14-gauge

2 Purpose and Scope

2.1 Purpose

2.1.1 The purpose of this Report Supplement is to show QuickTie U-Hanger Series, recognized in Report Number 1811-03, has also been evaluated for compliance with the codes listed below as adopted by the Florida Building Commission.

2.2 *Applicable Code Editions*

2.2.1 *FBC-B—20, 23: Florida Building Code – Building (FL 3557)*

2.2.2 *FBC-R—20, 23: Florida Building Code – Residential (FL 3557)*

3 Conclusions

3.1 The QuickTie U-Hanger Series, described in Report Number 1811-03, complies with the FBC-B and FBC-R and is subject to the conditions of use described in this supplement.

3.2 Where there are variations between the IBC and IRC and the FBC-B and FBC-R applicable to this report, they are listed here:

3.2.1 FBC-B Section 104 is reserved.

3.2.2 FBC-B Section 110.4 is reserved and replaces IBC Section 110.4.

3.2.3 FBC-B Section 104.6 is reserved and replaces IBC Section 104.4.

3.2.4 FBC-B Section 104.11 replaces IBC Section 104.2.3 and Section 104.2.3.2.

3.2.5 FBC-B Section 105.3 replaces IBC Section 105.3.

3.2.6 FBC-B Section 105.3.1 replaces IBC Section 105.3.1.

3.2.7 FBC-B Section 110.3 replaces IBC Section 110.3.

3.2.8 FBC-B Section 1707.1 replaces IBC Section 1707.1.

3.2.9 FBC-B Section 2304.10.3 replaces IBC Section 2304.10.4.

3.2.10 FBC-B Section 2303.5 replaces IBC Section 2303.5.

3.2.11 FBC-B Section 2306.1 replaces IBC Section 2306.1.

3.2.12 FBC-B Section 2306.3 replaces IBC Section 2306.3.

3.2.13 FBC-R Section R104 and Section R109 are reserved.

3.2.14 FBC-R Section R301.1.3 replaces IBC Section R301.1.3.

4 Conditions of Use

4.1 QuickTie U-Hanger Series, described in Report Number 1811-03, must comply with all of the following conditions:

4.1.1 All applicable sections in Report Number 1811-03.

4.1.2 The design, installation, and inspections are in accordance with additional requirements of FBC-B Chapter 16 and Chapter 17, as applicable.

Notes

1 For more information, visit drjcertification.org or call us at 608-310-6748.

2 Capitalized terms and responsibilities are defined pursuant to the applicable building code, applicable reference standards, the latest edition of TPI 1, the NDS, AISI S202, US professional engineering law, Canadian building code, Canada professional engineering law, Qualtim External Appendix A: Definitions/Commentary, Qualtim External Appendix B: Project/Deliverables, Qualtim External Appendix C: Intellectual Property and Trade Secrets, definitions created within Design Drawings and/or definitions within Reference Sheets. Beyond this, terms not defined shall have ordinarily accepted meanings as the context implies. Words used in the present tense include the future; words stated in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural, the singular.

[30] Qualification is performed by a legislatively defined Accreditation Body. ANSI National Accreditation Board (ANAB) is the largest independent accreditation body in North America and provides services in more than 75 countries. DrJ is an ANAB accredited product certification body.

[31] https://anabpd.ansi.org/Accreditation/product-certification/AllDirectoryDetails?prgID=1&orgID=2125&statusID=4#:~:text=Bill%20Payment%20Date-,Accredited%20Scopes,-13%20ENVIRONMENT.%20HEALTH

[32] See Code of Federal Regulations (CFR) Title 24 Subtitle B Chapter XX Part 3280 for definition: https://www.ecfr.gov/current/title-24/subtitle-B/chapter-XX/part-3280

[33] 2021 IBC Section 104.11

[34] 2021 IRC Section R104.11

[35] 2018: https://up.codes/viewer/wyoming/ifc-2018/chapter/1/scope-and-administration#104.9 AND 2021: https://up.codes/viewer/wyoming/ibc-2021/chapter/1/scope-and-administration#104.11

[36] Approved is an adjective that modifies the noun after it. For example, Approved Agency means that the Agency is accepted officially as being suitable in a particular situation. This example conforms to IBC/IRC/IFC Section 201.4 (https://up.codes/viewer/mississippi/ibc-2024/chapter/2/definitions#201.4) where the building code authorizes sentences to have an ordinarily accepted meaning such as the context implies.

[37] https://up.codes/viewer/mississippi/ibc-2024/chapter/17/special-inspections-and-tests#1707.1

[38] Multilateral approval is true for all ANAB accredited product evaluation agencies and all International Trade Agreements.
