

Listing and Technical Evaluation Report™

A Duly Authenticated Report from an Approved Agency

Report No: 2408-115

Issue Date: June 12, 2025 Revision Date: June 12, 2025 Subject to Renewal: July 1, 2026

Richland Laminated Columns

Trade Secret Report Holder:

Richland Laminated Columns

Phone: 419-895-0036

Website: richlandcolumns.com

Email: quality@richlandcolumns.com

CSI Designations:

DIVISION: 06 00 00 - WOOD, PLASTICS AND COMPOSITES Section: 06 17 00 - Shop-Fabricated Structural Wood

Section: 06 18 00 - Glued-Laminated Construction Section: 06 18 16 - Glued-Laminated Columns

1 Innovative Product Evaluated¹

- 1.1 Richland Laminated Columns
 - 1.1.1 Glue-Laminated Timber (GLT) Columns

2 Product Description and Materials

2.1 The innovative product evaluated in this report is shown in **Figure 1**.

Figure 1. Richland Laminated Columns

Report Number: 2408-115 Richland Laminated Columns Information contained in this report was developed using report holder's confidential intellectual property (IP) and trade secrets (TS), which is protected by Defend Trade Secrets Act 2016, © DrJ Engineering, LLC

- 2.2 Richland Glue-Laminated Timber is manufactured and identified in accordance with ANSI A190.1, as specified in <u>IBC Section 2303.1.3</u>.
 - 2.2.1 Richland GLT is a glue-laminated timber column comprised of nominal 2" thick, visually-graded No. 1 or 2400f-2.0E Machine Stress Rated (MSR) Southern Pine laminations adhered together to form rectangular beam/column sections.
 - 2.2.1.1 Adhesive, Bostik ISOSET[™] HX 1007-1080 in conjunction with ISOSET[™] HX300 primer, used for face and end-joints comply with ANSI 405 as specified in ANSI A190.1 Section 8.
 - 2.2.1.2 End joints (finger-joints) comply with ANSI A190.1.
 - 2.2.1.3 Richland GLT columns are planed on all four sides.
- 2.3 Richland Laminated Columns are available with one end of the product treated with Chromated Copper Arsenate (CCA) in accordance with American Wood Protection Association (AWPA) Standard U1 for ground-contact applications, as required in <u>IBC Section 2304.12.2.2</u>, <u>IBC Section 2304.12.2.6.1</u>, <u>IRC Section R407.1</u>, and <u>IRC Section R304</u>.
 - 2.3.1 Laminations are spliced in a staggered configuration. See **Figure 2**.

Figure 2. Staggered Treated Laminations

- 2.3.2 Fully treated and untreated columns are also available.
- 2.4 Size Availability:
 - 2.4.1 Richland Laminated Columns are available in heights/lengths up to 36', or up to 48' by request.
 - 2.4.2 Richland Glue-Laminated Timber (GLT):
 - 2.4.2.1 Nominal 2 x 6 laminations
 - 2.4.2.1.1 3-ply, 4-ply, or 5-ply
 - 2.4.2.2 Nominal 2 x 8 laminations
 - 2.4.2.2.1 3-ply, 4-ply, or 5-ply

2.5 Product dimensions for Richland Laminated Columns are listed in **Table 1**.

Product Type	Product ID	Dimensions (in) ¹		Section Properties ^{2,3,4}						
		Width	Depth	A (in) ²	S _x (in) ³	L _x (in) ⁴	S _y (in) ³	L _y (in) ⁴		
Richland Glue-Laminated Timber	RG-326	4.19	5.13	21.46	14.98	31.36	18.33	46.97		
	RG-426	5.50	5.13	28.19	25.84	71.06	24.08	61.70		
	RG-328	4.19	7.13	29.84	20.82	43.60	35.43	126.22		
	RG-428	5.50	7.13	39.19	35.92	98.79	46.54	165.78		
	RG-528	6.88	7.13	48.98	56.13	192.94	58.17	207.23		

Table 1. Product Dimensions and Section Properties - Richland Laminated Columns

SI: 1 in = 25.4 mm, 1 in2 = 645.16 mm², 1 in³ = 16,387.06 mm³, 1 in4 = 416,234.43 mm⁴

1. Dimensions are for vertically laminated beams/columns.

2. See Figure 3 for axis orientation.

3. X-X axis is the neutral axis for bending produced by loads applied perpendicular to the wide face of the laminations.

4. Y-Y axis is the neutral axis for bending produced by loads applied parallel to the wide face of the laminations.

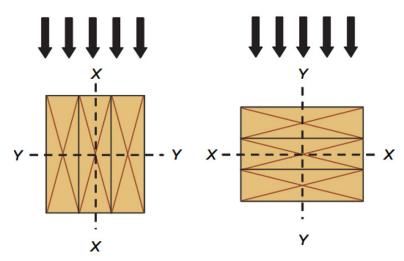

Figure 3. Vertically Laminated (Left) and Horizontally Laminated (Right)

2.6 As needed, review material properties for design in **Section 6** and the regulatory evaluation in **Section 8**.

3 Definitions²

- 3.1 <u>New Materials³</u> are defined as building materials, equipment, appliances, systems, or methods of construction, not provided for by prescriptive and/or legislatively adopted regulations, known as alternative materials.⁴ The <u>design strength</u> and permissible stresses shall be established by tests⁵ and/or engineering analysis.⁶
- 3.2 <u>Duly authenticated reports</u>⁷ and <u>research reports</u>⁸ are test reports and related engineering evaluations that are written by an <u>approved agency</u>⁹ and/or an <u>approved source</u>.¹⁰
 - 3.2.1 These reports utilize intellectual property and/or trade secrets to create public domain material properties for commercial end-use.
 - 3.2.1.1 This report protects confidential Intellectual Property and trade secretes under the regulation, <u>18.US.Code.90</u>, also known as <u>Defend Trade Secrets Act of 2016</u> (DTSA).¹¹
- 3.3 An approved agency is *"approved"* when it is <u>ANAB ISO/IEC 17065 accredited</u>. DrJ Engineering, LLC (DrJ) is accredited and listed in the <u>ANAB directory</u>.
- 3.4 An <u>approved source</u> is *"approved"* when a professional engineer (i.e., <u>Registered Design Professional</u>, hereinafter <u>RDP</u>) is properly licensed to transact engineering commerce. The regulatory authority governing approved sources is the <u>state legislature</u> via its professional engineering regulations.¹²
- 3.5 Testing and/or inspections conducted for this <u>duly authenticated report</u> were performed by an <u>ISO/IEC 17025</u> <u>accredited testing laboratory</u>, an <u>ISO/IEC 17020 accredited inspection body</u>, and/or a licensed <u>RDP</u>.
 - 3.5.1 The <u>Center for Building Innovation</u> (CBI) is <u>ANAB¹³ ISO/IEC 17025</u> and <u>ISO/IEC 17020</u> accredited.
- 3.6 The regulatory authority shall <u>enforce</u>¹⁴ the specific provisions of each legislatively adopted regulation. If there is a non-conformance, the specific regulatory section and language of the non-conformance shall be provided in <u>writing</u>¹⁵ stating the nonconformance and the path to its cure.
- 3.7 The regulatory authority shall accept <u>duly authenticated reports</u> from an <u>approved agency</u> and/or an <u>approved</u> <u>source</u> with respect to the quality and manner of use of new materials or assemblies as provided for in regulations regarding the use of alternative materials, designs, or methods of construction.¹⁶
- 3.8 ANAB is an <u>International Accreditation Forum</u> (IAF) <u>Multilateral Recognition Arrangement</u> (MLA) signatory. Therefore, recognition of certificates and validation statements issued by conformity assessment bodies accredited by all other signatories of the IAF MLA with the appropriate scope shall be approved.¹⁷ Thus, all ANAB ISO/IEC 17065 <u>duly authenticated reports</u> are approval equivalent,¹⁸ and can be used in any country that is an MLA signatory found at this link: <u>https://iaf.nu/en/recognised-abs/</u>
- 3.9 Approval equity is a fundamental commercial and legal principle.¹⁹

4 Applicable Local, State, and Federal Approvals; Standards; Regulations²⁰

- 4.1 Local, State, and Federal
 - 4.1.1 Approved in all local jurisdictions pursuant to ISO/IEC 17065 <u>duly authenticated report</u> use, which includes the following featured local jurisdictions and is not limited to: Austin, Baltimore, Broward County, Chicago, Clark County, Dade County, Dallas, Detroit, Denver, DuPage County, Fort Worth, Houston, Kansas City, King County, Knoxville, Las Vegas, Los Angeles City, Los Angeles County, Miami, Nashville, New York City, Omaha, Philadelphia, Phoenix, Portland, San Antonio, San Diego, San Jose, San Francisco, Seattle, Sioux Falls, South Holland, Texas Department of Insurance, and Wichita.²¹
 - 4.1.2 Approved in all state jurisdictions pursuant to ISO/IEC 17065 <u>duly authenticated report</u> use, which includes the following featured states, and is not limited to: California, Florida, New Jersey, Oregon, New York, Texas, Washington, and Wisconsin.²²

- 4.1.3 Approved by the Code of Federal Regulations Manufactured Home Construction: Pursuant to Title 24, Subtitle B, Chapter XX, Part 3282.14²³ and Part 3280²⁴ pursuant to the use of ISO/IEC 17065 <u>duly</u> <u>authenticated reports</u>.
- 4.1.4 Approved means complying with the requirements of local, state, or federal legislation.

4.2 Standards

- 4.2.1 AITC Test T107: Shear Test
- 4.2.2 AITC Test T110: Cyclic Delamination Test
- 4.2.3 AITC Test T119: Full Size End Joint Tension Test
- 4.2.4 ANSI 117: Standard Specification for Structural Glued Laminated Timber of Softwood Species
- 4.2.5 ANSI 405: Standard for Adhesives for Use in Structural Glued Laminated Timber
- 4.2.6 ANSI A190.1: Product Standard for Structural Glued Laminated Timber
- 4.2.7 ASABE EP 484.3: Diaphragm Design of Metal-Clad, Wood-Frame Rectangular Buildings
- 4.2.8 ASABE EP 486.3: Shallow Post and Pier Foundation Design
- 4.2.9 ASTM D198: Standard Methods of Static Testing of Lumber in Structural Sizes
- 4.2.10 ASTM D2559: Standard Specification for Adhesives for Bonded Structural Wood Products for Use Under Exterior Exposure Conditions
- 4.2.11 ASTM D3737: Standard Practice for Establishing Allowable Properties for Structural Glued Laminated Timber (Glulam)
- 4.2.12 ASTM D5457: Standard Specification for Computing Reference Resistance of Wood-Based Materials and Structural Connections for Load and Resistance Factor Design
- 4.2.13 ASTM D7469: Standard Test Methods for End Joints in Structural Wood Products
- 4.2.14 AWC National Design Specification (NDS®) for Wood Construction
- 4.2.15 AWC National Design Specification (NDS®) Supplement Design Values for Wood Construction
- 4.2.16 AWC Special Design Provisions for Wind and Seismic
- 4.3 Regulations
 - 4.3.1 IBC 18, 21, 24: International Building Code®
 - 4.3.2 IRC 18, 21, 24: International Residential Code®

5 Listed²⁵

5.1 Equipment, materials, products, or services included in a List published by a <u>nationally recognized testing</u> <u>laboratory</u> (i.e., CBI), an <u>approved agency</u> (i.e., CBI and DrJ), and/or and <u>approved source</u> (i.e., DrJ), or other organization(s) concerned with product evaluation (i.e., DrJ), that maintains periodic inspection (i.e., CBI) of production of listed equipment or materials, and whose listing states either that the equipment or material meets nationally recognized standards or has been tested and found suitable for use in a specified manner.

6 Tabulated Properties Generated from Nationally Recognized Standards

6.1 General

- 6.1.1 Richland Laminated Columns are intended for use as columns in the construction of buildings, pole barns, and various other structures.
 - 6.1.1.1 Richland Laminated Columns shall be designed in accordance with the applicable sections in the AWC NDS and its supplement as specified in <u>IBC Section 2306.1</u>.
 - 6.1.1.1.1 Where applicable, Richland Laminated Columns shall be laterally restrained at the top of the column by a roof diaphragm designed and detailed in accordance with AWC SDPWS or ASABE EP 484.3.
 - 6.1.1.2 Soil and backfill underneath and around Richland Laminated Columns for post-frame buildings shall be designed in accordance with ASABE EP 486.3 as specified in <u>IBC Section 2306.1</u>.
- 6.1.2 End-joints were evaluated for tensile strength and cyclic delamination in accordance with AITC T119 and AITC T110, respectively, as required per ANSI A190.1 Section 13.1.3, and met the requirements set forth therein.
- 6.1.3 Face joints of Richland GLT were evaluated for shear strength and cyclic delamination in accordance with AITC T107 and AITC T110, respectively, as required per ANSI A190.1 Section 13.1.2, and met the requirements set forth therein.
- 6.2 Reference Design Values
 - 6.2.1 Allowable Stress Design (ASD) values for Richland Laminated Columns are listed in **Table 2**.

Product Type	Product ID	Edgewise ¹ (psi)		Flatwise ² (psi)		Axial (psi)		F₀⊥	Eaxial ⁴	E _{app}	E min ⁵
		F _{by}	F νy ³	F _{bx}	F _{vx} ³	Ft	F₀	(psi)	(10 ⁶ psi)	(10 ⁶ psi)	(10 ⁶ psi)
Visually Graded (No. 1) RG-32	RG-326	1,750	250	1,800	300	1,150	1,450	650	1.8	1.7	0.90
	RG-426	1,850	260				1,700				
	RG-328	1,750	250				1,450				
Richland GLT		1,850	260				1,700				
	RG-528	1,850	260				1,700				
MSR Richland GLT	RG-326M	2,100	250	2,100	300	1,550	1,700	740	2.0	1.9	1.00
	RG-426M	2,300	260				2,300				
	RG-328M	2,100	250				1,700				
	RG-428M	2,300	260				2,300				
	RG-528M	2,300	260				2,300				

Table 2. Reference Design Values (ASD) for Richland Laminated Columns

SI: 1 psi = 0.0689 MPa

1. Bending about the Y-Y axis. Load applied parallel to wide faces of laminations.

2. Bending about the X-X axis. Load applied perpendicular to wide faces of laminations.

3. Design values for shear shall be decreased by a factor of 0.72 for non-prismatic members, notched members, and for all members subject to impact or cyclic loading. This reduced design value shall be used for design of members at connections that transfer shear by mechanical fasteners, and for determination of design values for radial tension and torsion.

4. The true (shear-free) Modulus Of Elasticity (MOE) shall be equal to the tabulated Eaxial.

5. The tabulated E_{min} values can be used in beam stability and column stability calculations.

Report Number: 2408-115 Richland Laminated Columns

6.2.1.1 Tabulated ASD values in **Table 2** can be converted to Load Resistance Factor Design (LRFD) values using the provisions set forth in <u>NDS Chapter 2</u> or ASTM D5457.

6.2.2 Allowable Axial Compression Loads:

6.2.2.1 The allowable axial compression loads for Richland Laminated Columns are provided in **Table 3**.

D					Maximum Allowable Load (lb)										
	Unbraced Column Length (ft)														
		14	16	18	20	21	22	23	24

Table 3. Maximum Allowable Compression Loads

1. Calculations based on <u>NDS Section 3.7</u> and the following assumptions: K_e = 1.0 and non-eccentric loading.

6.3 Fire Resistance

- 6.3.1 Per <u>IBC Section 722.1</u>, the methodology detailed in <u>NDS Chapter 16</u> is permitted to be used in designing Richland Laminated Columns exposed to fire up to 2 hours.
- 6.4 Where the application falls outside of the performance evaluation, conditions of use, and/or installation requirements set forth herein, alternative techniques shall be permitted in accordance with accepted engineering practice and experience. This includes but is not limited to the following areas of engineering: mechanics or materials, structural, building science, and fire science.

7 Certified Performance²⁶

- 7.1 All construction methods shall conform to accepted engineering practices to ensure durable, livable, and safe construction and shall demonstrate acceptable workmanship reflecting journeyman quality of work of the various trades.²⁷
- 7.2 The strength and rigidity of the component parts and/or the integrated structure shall be determined by engineering analysis or by suitable load tests to simulate the actual loads and conditions of application that occur.²⁸

8 Regulatory Evaluation and Accepted Engineering Practice

- 8.1 Richland Laminated Columns comply with the following legislatively adopted regulations and/or accepted engineering practice for the following reasons:
 - 8.1.1 Richland Glue-Laminated Timber was evaluated in accordance with ANSI A190.1 as specified in <u>IBC</u> Section 2303.1.3.
 - 8.1.2 Dimensions of Richland Laminated Columns comply with the minimum nominal size as specified in <u>IRC</u> <u>Section R407.3</u>.
- 8.2 Any building code, regulation and/or accepted engineering evaluations (i.e., <u>research reports</u>, <u>duly</u> <u>authenticated reports</u>, etc.) that are conducted for this Listing were performed by DrJ, which is an <u>ISO/IEC</u> <u>17065 accredited certification body</u> and a professional engineering company operated by <u>RDP</u> or <u>approved</u> <u>sources</u>. DrJ is qualified²⁹ to practice product and regulatory compliance services within its <u>scope of</u> <u>accreditation and engineering expertise</u>,³⁰ respectively.
- 8.3 Engineering evaluations are conducted with DrJ's ANAB <u>accredited ICS code scope</u> of expertise, which is also its areas of professional engineering competence.
- 8.4 Any regulation specific issues not addressed in this section are outside the scope of this report.

9 Installation

- 9.1 Installation shall comply with the approved construction documents, the manufacturer installation instructions, this report, and the applicable building code.
- 9.2 In the event of a conflict between the manufacturer installation instructions and this report, contact the manufacturer for counsel on the proper installation method.

10 Substantiating Data

- 10.1 Testing has been performed under the supervision of a professional engineer and/or under the requirements of ISO/IEC 17025 as follows:
 - 10.1.1 Adhesive compliance to ANSI 405 from an approved source
 - 10.1.2 Adhesive compliance to ASTM D2559 from an approved source
 - 10.1.3 End-joint delamination and tension testing in accordance with AITC T110, AITC T119, and ASTM D7469
 - 10.1.4 Face bond shear and delamination testing in accordance with AITC T107 and AITC T110
 - 10.1.5 Flexural strength and stiffness testing in accordance with ASTM D198
 - 10.1.6 Compression parallel-to-grain testing in accordance with ASTM D198
- 10.2 Information contained herein may include the result of testing and/or data analysis by sources that are <u>approved agencies</u>, <u>approved sources</u>, and/or an <u>RDP</u>. Accuracy of external test data and resulting analysis is relied upon.
- 10.3 Where applicable, testing and/or engineering analysis are based upon provisions that have been codified into law through state or local adoption of regulations and standards. The developers of these regulations and standards are responsible for the reliability of published content. DrJ's engineering practice may use a regulation-adopted provision as the control. A regulation-endorsed control versus a simulation of the conditions of application to occur establishes a new material as <u>being equivalent</u> to the regulatory provision in terms of quality, <u>strength</u>, effectiveness, <u>fire resistance</u>, durability, and safety.
- 10.4 The accuracy of the provisions provided herein may be reliant upon the published properties of raw materials, which are defined by the grade mark, grade stamp, mill certificate, or <u>duly authenticated reports</u> from <u>approved</u> <u>agencies</u> and/or <u>approved sources</u> provided by the supplier. These are presumed to be minimum properties and relied upon to be accurate. The reliability of DrJ's engineering practice, as contained in this <u>duly</u> <u>authenticated report</u>, may be dependent upon published design properties by others.

- 10.5 Testing and Engineering Analysis:
 - 10.5.1 The strength, rigidity, and/or general performance of component parts and/or the integrated structure are determined by suitable tests that simulate the actual conditions of application that occur and/or by accepted engineering practice and experience.³¹
- 10.6 Where additional condition of use and/or regulatory compliance information is required, please search for Richland Laminated Columns on the <u>DrJ Certification website</u>.

11 Findings

- 11.1 As outlined in **Section 6**, Richland Laminated Columns have performance characteristics that were tested and/or meet applicable regulations. In addition, they are suitable for use pursuant to its specified purpose.
- 11.2 When used and installed in accordance with this <u>duly authenticated report</u> and the manufacturer installation instructions, Richland Laminated Columns shall be approved for the following applications:
 - 11.2.1 Richland Laminated Columns are recognized as being in compliance with the design parameters herein and are permitted to be used as structural members in Type IV and other types of construction permitted by the IBC.
 - 11.2.2 Richland Laminated Columns are permitted for ground-contact per <u>IBC Section 2304.12.2.2</u>, <u>IBC</u>
- 11.3 Unless exempt by state statute, when Richland Laminated Columns are to be used as a structural and/or building envelope component in the design of a specific building, the design shall be performed by an <u>RDP</u>.
- 11.4 Any application specific issues not addressed herein can be engineered by an <u>RDP</u>. Assistance with engineering is available from Richland Laminated Columns.
- 11.5 IBC Section 104.2.3 (IRC Section R104.2.2 and IFC Section 104.2.3³² are similar) in pertinent part state:

104.2.3 Alternative Materials, Design and Methods of Construction and Equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative is not specifically prohibited by this code and has been approved.

- 11.6 Approved: ³³ Building regulations require that the building official shall accept duly authenticated reports. ³⁴
 - 11.6.1 An approved agency is "approved" when it is ANAB ISO/IEC 17065 accredited.
 - 11.6.2 An <u>approved source</u> is *"approved"* when an <u>RDP</u> is properly licensed to transact engineering commerce.
 - 11.6.3 Federal law, <u>Title 18 US Code Section 242</u>, requires that, where the alternative product, material, service, design, assembly, and/or method of construction is not approved, the building official shall respond in writing, stating the reasons why the alternative was not approved. Denial without written reason deprives a protected right to free and fair competition in the marketplace.
- 11.7 DrJ is a licensed engineering company, employs licensed <u>RDP</u>s and is an <u>ANAB Accredited Product</u> <u>Certification Body – Accreditation #1131</u>.
- 11.8 Through the <u>IAF Multilateral Arrangement</u> (MLA), this <u>duly authenticated report</u> can be used to obtain product approval in any <u>jurisdiction</u> or <u>country</u> because all ANAB ISO/IEC 17065 <u>duly authenticated reports</u> are equivalent.³⁵

12 Conditions of Use

- 12.1 Material properties shall not fall outside the boundaries defined in **Section 6**.
- 12.2 As defined in **Section 6**, where material and/or engineering mechanics properties are created for load resisting design purposes, the resistance to the applied load shall not exceed the ability of the defined properties to resist those loads using the principles of accepted engineering practice.

- 12.3 As listed herein, Richland Laminated Columns shall be subjected to the following conditions:
 - 12.3.1 The design of Richland Laminated Columns shall comply with the requirements of <u>IBC Section 2306</u> for Allowable Stress Design (ASD), <u>IBC Section 2307</u> for Load and Resistance Factor Design (LRFD), <u>IRC Section R502.2</u>, <u>IRC Section R802.2</u>, and NDS as applicable. All applicable adjustments to the ASD values shall be in accordance with <u>NDS Section 5.3</u>.
 - 12.3.1.1 The tabulated design values in **Table 2** are for dry service conditions where the moisture content in service is less than sixteen percent (16%).
 - 12.3.1.1.1 For wet service conditions, where the moisture content in service is greater than sixteen percent (16%), the design values in **Table 2** shall be multiplied by the applicable wet service factor, C_M, specified in Tables 5A, 5B, 5C, and 5D of the <u>AWC NDS Supplement</u>, Chapter 4 Reference Design Values.
 - 12.3.2 Per <u>IBC Section 2304.12.2.2</u>, Richland Laminated Columns that are not treated with a pressure-preservative shall be:
 - 12.3.2.1 Protected by a roof, eave, overhang, or other covering if exposed to the weather. In general, untreated posts or columns are not exposed to the weather.
 - 12.3.2.2 Supported by concrete piers or metal pedestals projected not less than 1" above the slab or deck, and are separated from the concrete pier by an impervious moisture barrier.
 - 12.3.2.3 Located not less than 8" above exposed earth.
 - 12.3.3 Richland Laminated Columns shall be restrained to prevent lateral displacement at the bottom end, per <u>IRC Section R407.3</u>.
 - 12.3.3.1 In Seismic Design Categories (SDC) A through C, columns not more than 48" in height on a pier or footing, are exempt from the bottom end lateral displacement requirement within under-floor areas enclosed by a continuous foundation.
 - 12.3.4 Richland Laminated Columns shall be protected from termites when installed in geographical areas where hazard of termite damage is known to be *"very heavy"* per <u>IBC Section 2304.12.2.7</u> and <u>IRC Section R305</u>.
 - 12.3.4.1 See <u>IBC Figure 2603.8</u> or <u>IRC Figure R305.4</u>.
 - 12.3.5 Fasteners used in contact with preservative-treated lumber shall comply with <u>IBC Section 2304.10.6</u> and <u>IRC Section R304.3</u>.
 - 12.3.6 Richland Laminated Columns shall be installed into bored holes in the ground and backfilled with suitable compacted soils, wet-poured concrete, or a self-leveling and self-compacting material.
 - 12.3.6.1 Backfill material and foundation is outside the scope of this report and shall be designed by an engineer.
- 12.4 When required by adopted legislation and enforced by the <u>building official</u>, also known as the Authority Having Jurisdiction (AHJ) in which the project is to be constructed:
 - 12.4.1 Any calculations incorporated into the construction documents shall conform to accepted engineering practice and, when prepared by an <u>approved source</u>, shall be approved when signed and sealed.
 - 12.4.2 This report and the installation instructions shall be submitted at the time of permit application.
 - 12.4.3 This innovative product has an internal quality control program and a third-party quality assurance program.
 - 12.4.4 At a minimum, this innovative product shall be installed per **Section 9**.
 - 12.4.5 The review of this report by the AHJ shall comply with <u>IBC Section 104.2.3.2</u> and <u>IBC Section 105.3.1</u>.

- 12.4.6 This innovative product has an internal quality control program and a third party quality assurance program in accordance with IBC Section 104.7.2, IBC Section 110.4, IBC Section 1703, IRC Section R104.7.2, and IRC Section R109.2.
- 12.4.7 The application of this innovative product in the context of this report is dependent upon the accuracy of the construction documents, implementation of installation instructions, inspection as required by <u>IBC</u> <u>Section 110.3</u>, <u>IRC Section R109.2</u>, and any other regulatory requirements that may apply.
- 12.5 The approval of this report by the AHJ shall comply with <u>IBC Section 1707.1</u>, where legislation states in part, *"the <u>building official</u> shall make, or cause to be made, the necessary tests and investigations; or the <u>building</u> <u>official</u> shall accept duly authenticated reports from <u>approved agencies</u> in respect to the quality and manner of use of new materials or assemblies as provided for in <u>Section 104.2.3</u>", all of <u>IBC Section 104</u>, and <u>IBC Section 105.3</u>.*
- 12.6 <u>Design loads</u> shall be determined in accordance with the regulations adopted by the jurisdiction in which the project is to be constructed and/or by the building designer (i.e., <u>owner</u> or <u>RDP</u>).
- 12.7 The actual design, suitability, and use of this report for any particular building, is the responsibility of the owner or the authorized agent of the <u>owner</u>.

13 Identification

- 13.1 The innovative product listed in **Section 1.1** is identified by a label on the board or packaging material bearing the manufacturer name, product name, this report number, and other information to confirm code compliance.
- 13.2 Additional technical information can be found at <u>richlandcolumns.com</u>.

14 Review Schedule

- 14.1 This report is subject to periodic review and revision. For the latest version, visit <u>www.drjcertification.org</u>.
- 14.2 For information on the status of this report, please contact <u>DrJ Certification</u>.

Notes

- ¹ For more information, visit <u>dricertification.org</u> or call us at 608-310-6748.
- ² Capitalized terms and responsibilities are defined pursuant to the applicable building code, applicable reference standards, the latest edition of <u>TPI1</u>, the <u>NDS</u>, <u>AISI S202</u>, <u>US</u> professional engineering law, <u>Canadian building code</u>, <u>Canada professional engineering law</u>, <u>Qualtim External Appendix A: Definitions/Commentary</u>, <u>Qualtim External Appendix B:</u> <u>Project/Deliverables</u>, <u>Qualtim External Appendix C: Intellectual Property and Trade Secrets</u>, definitions created within Design Drawings and/or definitions within Reference Sheets. Beyond this, terms not defined shall have ordinarily accepted meanings as the context implies. Words used in the present tense include the future; words stated in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural, the singular.
