

Listing and Technical Evaluation Report™

A Duly Authenticated Report from an Approved Agency

Report No: 1402-01

Issue Date: July 21, 2014

Revision Date: August 18, 2025

Subject to Renewal: October 1, 2026

Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 Air Barrier Water-Resistive Barrier and Fire Performance in Exterior and Interior Walls of Buildings of Type I-V Construction

Trade Secret Report Holder:

1 Innovative Products Evaluated¹

1.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286

2 Product Description and Materials

- 2.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are proprietary Foam Plastic Insulating Sheathing (FPIS) products.
 - 2.1.1 Xci CG Class A is a rigid insulation panel composed of a closed cell polyisocyanurate foam core with coated glass facers adhered on both sides.
 - 2.1.1.1 Xci CG Class A conforms to ASTM C1289 Type II, Class 2, Grade 3.
 - 2.1.2 Xci Ply Class A is a composite rigid insulation panel composed of a closed cell polyisocyanurate foam core with a coated glass facer adhered to one side and fire treated plywood (either 5/8" or 3/4") on the other side.
 - 2.1.2.1 Xci Ply Class A conforms to ASTM C1289 Type V. The foam core conforms to ASTM C1289 Type II, Class 2.
 - 2.1.3 Xci Foil Class A and Xci 286 are rigid insulation panels composed of a 20 or 25 psi closed cell polyisocyanurate insulation foam core with a glass-backed aluminum foil facers adhered to both sides.
 - 2.1.3.1 Xci Foil Class A and Xci 286 conforms to ASTM C1289 Type I, Grade 2 (20 psi) or Grade 3 (25 psi).
 - 2.1.4 Xci Foil Class A Plus is a rigid insulation panel composed of a 25 psi closed cell polyisocyanurate insulation foam core with increased fire-retardant and tri-laminate foil facers adhered on both sides.
 - 2.1.4.1 Xci Foil Class A Plus conforms to ASTM C1289 Type I, Class 1 and Class 2.

- 2.2 Material Availability
 - 2.2.1 Thickness:
 - 2.2.1.1 Xci Ply Class A:

2.2.1.1.1 A ⁵/₈" or ³/₄" fire treated plywood with 1" (25.4 mm) through 4" (102 mm) coated glass polyiso

- 2.2.1.2 Xci CG Class A, Xci Foil Class A, and Xci 286:
 - 2.2.1.2.1 1" (25.4 mm) through 4" (102 mm)
- 2.2.1.3 Xci Foil Class A Plus:
 - 2.2.1.3.1 Available in thicknesses from 1" (25.4 mm) through 4" (102 mm)
- 2.2.2 Standard Product Width:
 - 2.2.2.1 48" (1,219 mm)
- 2.2.3 Standard Product Length:
 - 2.2.3.1 Xci Ply Class A:
 - 2.2.3.1.1 96" (2,438 mm)
 - 2.2.3.2 Xci CG Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286:
 - 2.2.3.2.1 96" (2,438 mm)
 - 2.2.3.2.2 120" (3,048 mm)
 - 2.2.3.2.3 144" (3,657 mm)
- 2.2.4 Custom widths, lengths, and thicknesses are available upon request.
- 2.3 As needed, review material properties for design in **Section 6** and the regulatory evaluation in **Section 8**.

3 Definitions²

- 3.1 <u>New Materials³</u> are defined as building materials, equipment, appliances, systems, or methods of construction, not provided for by prescriptive and/or legislatively adopted regulations, known as alternative materials.⁴ The <u>design strength</u> and permissible stresses shall be established by tests⁵ and/or engineering analysis.⁶
- 3.2 <u>Duly authenticated reports</u>⁷ and <u>research reports</u>⁸ are test reports and related engineering evaluations that are written by an <u>approved agency</u>⁹ and/or an <u>approved source</u>.¹⁰
 - 3.2.1 These reports utilize intellectual property and/or trade secrets to create public domain material properties for commercial end-use.
 - 3.2.1.1 This report protects confidential Intellectual Property and trade secretes under the regulation, <u>18.US.Code.90</u>, also known as <u>Defend Trade Secrets Act of 2016</u> (DTSA).¹¹
- 3.3 An approved agency is *"approved"* when it is <u>ANAB ISO/IEC 17065 accredited</u>. DrJ Engineering, LLC (DrJ) is accredited and listed in the <u>ANAB directory</u>.
- 3.4 An <u>approved source</u> is *"approved"* when a professional engineer (i.e., <u>Registered Design Professional</u>, hereinafter <u>RDP</u>) is properly licensed to transact engineering commerce. The regulatory authority governing approved sources is the <u>state legislature</u> via its professional engineering regulations.¹²
- 3.5 Testing and/or inspections conducted for this <u>duly authenticated report</u> were performed by an <u>ISO/IEC 17025</u> <u>accredited testing laboratory</u>, an <u>ISO/IEC 17020 accredited inspection body</u>, and/or a licensed <u>RDP</u>.
 - 3.5.1 The <u>Center for Building Innovation</u> (CBI) is <u>ANAB¹³ ISO/IEC 17025</u> and <u>ISO/IEC 17020</u> accredited.
- 3.6 The regulatory authority shall <u>enforce</u>¹⁴ the specific provisions of each legislatively adopted regulation. If there is a non-conformance, the specific regulatory section and language of the non-conformance shall be provided in <u>writing</u>¹⁵ stating the nonconformance and the path to its cure.

- 3.7 The regulatory authority shall accept <u>duly authenticated reports</u> from an <u>approved agency</u> and/or an <u>approved</u> <u>source</u> with respect to the quality and manner of use of new materials or assemblies as provided for in regulations regarding the use of alternative materials, designs, or methods of construction.¹⁶
- 3.8 ANAB is an <u>International Accreditation Forum</u> (IAF) <u>Multilateral Recognition Arrangement</u> (MLA) signatory. Therefore, recognition of certificates and validation statements issued by conformity assessment bodies accredited by all other signatories of the IAF MLA with the appropriate scope shall be approved.¹⁷ Thus, all ANAB ISO/IEC 17065 <u>duly authenticated reports</u> are approval equivalent,¹⁸ and can be used in any country that is an MLA signatory found at this link: <u>https://iaf.nu/en/recognised-abs/</u>
- 3.9 Approval equity is a fundamental commercial and legal principle.¹⁹

4 Applicable Local, State, and Federal Approvals; Standards; Regulations²⁰

- 4.1 Local, State, and Federal
 - 4.1.1 Approved in all local jurisdictions pursuant to ISO/IEC 17065 <u>duly authenticated report</u> use, which includes, but is not limited to, the following featured local jurisdictions: Austin, Baltimore, Broward County, Chicago, Clark County, Dade County, Dallas, Detroit, Denver, DuPage County, Fort Worth, Houston, Kansas City, King County, Knoxville, Las Vegas, Los Angeles City, Los Angeles County, Miami, Nashville, New York City, Omaha, Philadelphia, Phoenix, Portland, San Antonio, San Diego, San Jose, San Francisco, Seattle, Sioux Falls, South Holland, Texas Department of Insurance, and Wichita.²¹
 - 4.1.2 Approved in all state jurisdictions pursuant to ISO/IEC 17065 <u>duly authenticated report</u> use, which includes, but is not limited to, the following featured states: California, Florida, New Jersey, Oregon, New York, Texas, Washington, and Wisconsin.²²
 - 4.1.3 Approved by the Code of Federal Regulations Manufactured Home Construction: Pursuant to Title 24, Subtitle B, Chapter XX, Part 3282.14²³ and Part 3280²⁴ pursuant to the use of ISO/IEC 17065 <u>duly</u> <u>authenticated reports</u>.
 - 4.1.4 Approved means complying with the requirements of local, state, or federal legislation.
- 4.2 Standards
 - 4.2.1 ASTM C1289: Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
 - 4.2.2 ASTM E84: Standard Test Method for Surface Burning Characteristics of Building Materials
 - 4.2.3 ASTM E96: Standard Test Methods for Water Vapor Transmission of Materials
 - 4.2.4 ASTM E119: Standard Test Methods for Fire Tests of Building Construction and Materials
 - 4.2.5 ASTM E136: Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750°C
 - 4.2.6 ASTM E331: Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference
 - 4.2.7 ASTM E1354: Standard Test Method for Heat and Visible Smoke Release Rates for Materials and Products Using an Oxygen Consumption Calorimeter
 - 4.2.8 ASTM E2178: Standard Test Method for Air Permeance of Building Materials
 - 4.2.9 ASTM E2357: Standard Test Method for Determining Air Leakage Rate of Air Barrier Assemblies
 - 4.2.10 NFPA 259: Standard Test Method for Potential Heat of Building Materials
 - 4.2.11 NFPA 285: Standard Fire Test Method for the Evaluation of Fire Propagation Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components
 - 4.2.12 NFPA 286: Standard Methods of Fire Test for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth

- 4.2.13 UL 263: Standard for Fire Tests of Building Construction and Materials
- 4.2.14 UL 723: Test for Surface Burning Characteristics of Building Materials
- 4.2.15 UL 1715: Fire Test of Interior Finish Material

4.3 Regulations

- 4.3.1 IBC 15, 18, 21, 24: International Building Code®
- 4.3.2 IRC 15, 18, 21, 24: International Residential Code®
- 4.3.3 IECC 15, 18, 21, 24: International Energy Conservation Code®

5 Listed²⁵

5.1 Equipment, materials, products, or services included in a List published by a <u>nationally recognized testing</u> <u>laboratory</u> (i.e., CBI), an <u>approved agency</u> (i.e., CBI and DrJ), and/or and <u>approved source</u> (i.e., DrJ), or other organization(s) concerned with product evaluation (i.e., DrJ), that maintains periodic inspection (i.e., CBI) of production of listed equipment or materials, and whose listing states either that the equipment or material meets nationally recognized standards or has been tested and found suitable for use in a specified manner.

6 Tabulated Properties Generated from Nationally Recognized Standards

6.1 General

- 6.1.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are FPIS products complying with <u>IBC Section 2603</u> and <u>IRC Section R303</u>.²⁶
- 6.1.2 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are used in exterior walls of buildings of any height and of Type I-V construction in accordance with <u>IBC Section 2603.5</u> and <u>IRC Section R303.5.12</u>.²⁷
- 6.1.3 Environmental Product Declarations (EPD) for Xci CG Class A, Xci Ply Class A, Xci Foil Class A,
- 6.2 Vapor-Retarding Insulated Sheathing
 - 6.2.1 Xci Foil Class A, Xci Foil Class A Plus and Xci 286 were evaluated for use as a vapor retarder in accordance with ASTM E96 per <u>IBC Section 202</u>, <u>IBC Section 1404.3</u>,²⁸ <u>IRC Section R202</u>, and <u>IRC Section R702.7</u> and achieved a Vapor Retarder Class I (≤ 0.1 perm).
 - 6.2.1.1 Per <u>IBC Section 1404.3.1</u>,²⁹ only Class III vapor retarders shall be used on the interior side of walls framed with insulated sheathing with < 1 perm installed on the exterior side of the framed wall.
 - 6.2.2 Water vapor permeance of Xci Foil Class A and Xci 286 is shown in **Table 1**.

Product ¹	Water Vapor Permeance (perm)		
	ASTM E96 A (Desiccant Method)	ASTM E96 B (Water Method)	Vapor Retarder Class
Xci Foil Class A			
Xci Foil Class A Plus	< 0.1	< 0.1	Class I
Xci 286			
SI: 1 perm = 57.2 ng/(Pa·s·m ²) 1. Evaluated at a thickness of	1".		

Table 1. Water Vapor Permeance Performance

Report Number: 1402-01 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 Air Barrier Water-Resistive Barrier and Fire Performance in Exterior and Interior Walls of Buildings of Type I-V Construction Information contained in this report was developed using report holder's confidential intellectual property (IP) and trade secrets (TS), which is protected by <u>Defend Trade Secrets Act 2016</u>, © DrJ Engineering, LLC

6.3 Air Barrier

- 6.3.1 Xci 286 was evaluated in accordance with ASTM E2178 and met the requirements of <u>IRC Section</u> <u>N1101.10.5</u>, <u>IECC Section R303.1.5</u>, and <u>IECC Section C402.6.2.3.1</u>.³⁰
 - 6.3.1.1 Xci 286 is permitted for use as an air barrier material or a component of an air barrier assembly when installed in accordance with the manufacturer installation instructions, this report, and with all seams, including the top and bottom edges, taped.
- 6.3.2 Xci Foil Class A, Xci Foil Class A Plus, and Xci CG Class A were evaluated in accordance with ASTM E2357 and met the requirements of <u>IECC Section C402.6.2.3.2</u>.³¹
 - 6.3.2.1 Xci Foil Class A, Xci Foil Class A Plus, and Xci CG Class A are permitted for use as part of an air barrier assembly when installed in accordance with the manufacturer installation instructions, this report, and with all seams, including the top and bottom edges, taped.
- 6.3.3 Air permeability values per test standard are provided **Table 2**.
 - 6.3.3.1 As an alternative to the tape noted in **Section 6.3.2**, Xci Foil Class A, Xci 286, and Xci Foil Class A Plus sheathing joints and penetrations are permitted to be sealed with Hunter Panels BarriBond HP Liquid Flashing and Detail Sealant.

Table 2. Xci Foil Class A, Xci Foil Class A Plus, Xci CG Class A and Xci 286 Air Barrier Properties

Test Method	Air Barrier Performance ³
ASTM E2178	$\leq 0.00012 \text{ L/(s.m^2)} [0.000024 \text{ cfm/ft}^2]$
ASTM E2357	≤ 0.020 L/(s.m²) [0.0004 cfm/ft²] ^{1,2}

Imperial: 1 L/(s.m²) = 0.2 cfm/ft², 1 Pa = 0.209 psf

All seams and joints between boards shall be covered by 4" wide Carlisle[®] Coatings & Waterproofing Foil-Grip[™] 1402 pressure sensitive foil-faced flashing tape.
 All fenestrations and penetrations shall be sealed with 9" wide Carlisle Coatings & Waterproofing Aluma-Grip[™] 701 foil-faced self-adhering flashing tape with the

 All renestrations and penetrations shall be sealed with 9 wide Carlisle Coatings & waterproofing Aluma-Grip⁺⁺⁺ 701 foil-faced self-adhening fashing tape with the top of the flashing sealed with a butyl-based sealant.

3. Air permeability reported under a pressure of 75 Pa (1.57 psf).

6.4 Water-Resistive Barrier (WRB)

- 6.4.1 Xci Foil Class A, Xci 286 and Xci Foil Class A Plus are approved for use as a WRB as prescribed in <u>IBC</u> Section 1403.2 and <u>IRC Section R703.2³²</u> when installed on exterior walls as described in this section.
- 6.4.2 Xci Foil Class A, Xci 286 and Xci Foil Class A Plus shall be installed horizontally or vertically with board joints placed directly over exterior framing spaced a maximum of 24" (610 mm) o.c. The fasteners used to attach the board shall be installed in accordance with **Section 9**.
- 6.4.3 All seams and joints between boards shall be covered by 4" wide Carlisle Coatings & Waterproofing Foil Grip 1402 pressure sensitive foil-faced flashing tape.
- 6.4.4 A separate WRB may also be provided. If a separate WRB method is used, taping of the sheathing joints is not required.
- 6.4.5 Flashing of penetrations is required and shall comply with the applicable code.

6.5 *Fire Safety Performance*

- 6.5.1 *Surface Burning Characteristics:*
 - 6.5.1.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 were evaluated to assess performance with regard to flame spread and smoke-developed indices in accordance with UL 723 as shown in **Table 3**.

Table 3. Surface Burning Characteristics¹

Product Name	Flame Spread Index	Smoke-Developed Index	Classification
Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286	≤ 25	< 450	Class A
1. Foam core tested in accordance with UL 723 (ASTM E84). Flame spread and smoke-developed indexes are shown for comparison purposes only and are not intended to represent the performance under actual fire conditions.			

6.5.2 Ignition:

- 6.5.2.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, and Xci 286 were evaluated to assess performance with regard to ignition in accordance with IBC Section 2603.5.7. Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 comply with this section when the exterior side of the sheathing is protected with one of the following materials:
 - 6.5.2.1.1 A thermal barrier complying with IBC Section 2603.4.
 - 6.5.2.1.2 A minimum 1" (25.4 mm) thickness of concrete or masonry.
 - 6.5.2.1.3 Glass fiber reinforced concrete panels with a minimum thickness of 3/8" (9.5 mm).
 - 6.5.2.1.4 Metal faced panels having a minimum 0.019" (0.48 mm) thick aluminum or 0.016" (0.41 mm) thick corrosion resistant steel outer facings.
 - 6.5.2.1.5 A minimum ⁷/₈" (22.2 mm) thickness of stucco complying with IBC Section 2510.
 - A minimum ¹/₄" (0.4 mm) thickness of fiber cement siding complying with IBC Section 1404.17,³³ 6.5.2.1.6 and IBC Section 1404.17.1, 34 or IBC Section 1404.17.2.35
- 6.5.3 Potential Heat:
 - 6.5.3.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A and Xci 286 were tested in accordance with NFPA 259 to assess the potential heat generated by the FPIS in accordance with IBC Section 2603.5.3 and IRC Section R303.5.7,³⁶ as shown in **Table 4**.

Product	Potential Heat (Btu/lb) ¹
Xci CG Class A	11,503
Xci Ply Class A	11,503
Xci Foil Class A	11,587
Xci Foil Class A Plus	11,587
Xci 286	11,587
SI: 1 lb. = 4.45 N	

Table 4. Potential Heat

Tested in accordance with NFPA 259.

- 6.5.4 Vertical and Lateral Fire Propagation:
 - 6.5.4.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 were tested to assess their performance with regard to vertical and lateral fire propagation in accordance with NFPA 285 and <u>IBC Section 2603.5.5</u>.³⁷
 - 6.5.4.2 Engineering analysis has also been conducted to assess substitution of other products within the approved wall assemblies.
 - 6.5.4.3 The wall assemblies listed in **Appendix A** are approved for use in buildings of Type I-IV construction.
 - 6.5.4.3.1 For building codes based on 2018 IBC or earlier, **Appendix B** may be used instead of **Appendix A** throughout the rest of this document.
- 6.5.5 Special Approval:
 - 6.5.5.1 Xci Foil Class A and Xci 286, up to 3¹/₂" (88.9 mm) thick, has been tested for use without a thermal barrier on walls only or ceilings only to NFPA 286 in accordance with <u>IBC Section 2603.9</u> and <u>IRC Section R303.6</u>,³⁸ and met the criteria of <u>IBC Section 803.1.1</u>. Therefore, Xci Foil Class A and Xci 286 require no thermal barrier or ignition barrier protection.
 - 6.5.5.2 Xci Foil Class A and Xci 286 up to 3¹/₂" (88.9 mm) thick has been tested for use without an ignition barrier on walls and/or ceilings in attics and crawl spaces to NFPA 286 in accordance with <u>IBC</u> <u>Section 2603.9</u> and <u>IRC Section R303.6</u>³⁹ and has met the criteria of <u>IBC Section 803.1.1</u>. Therefore, Xci Foil Class A and Xci 286 require no ignition barrier protection in attics and crawl spaces.
 - 6.5.5.3 Xci Foil Class A and Xci 286, up to 8" (203 mm) thick, has been tested to UL 1715 in accordance with <u>IBC Section 2603.9</u> and <u>IRC Section R303.6</u>⁴⁰ and met the requirements of the standard. Therefore, Xci Foil Class A and Xci 286, up to 8" thick, is approved for use on ceilings and floors without a thermal barrier.
 - 6.5.5.4 Xci Foil Class A and Xci 286 are not recommended for applications requiring an aesthetic or wear resistant surface.
- 6.6 Where the application falls outside of the performance evaluation, conditions of use, and/or installation requirements set forth herein, alternative techniques shall be permitted in accordance with accepted engineering practice and experience. This includes but is not limited to the following areas of engineering: mechanics or materials, structural, building science, and fire science.

7 Certified Performance⁴¹

- 7.1 All construction methods shall conform to accepted engineering practices to ensure durable, livable, and safe construction and shall demonstrate acceptable workmanship reflecting journeyman quality of work of the various trades.⁴²
- 7.2 The strength and rigidity of the component parts and/or the integrated structure shall be determined by engineering analysis or by suitable load tests to simulate the actual loads and conditions of application that occur.⁴³

8 Regulatory Evaluation and Accepted Engineering Practice

- 8.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 comply with the following legislatively adopted regulations and/or accepted engineering practice for the following reasons:
 - 8.1.1 Performance for use in exterior walls of buildings of any height and of Type I-V construction in accordance with <u>IBC Section 2603.5</u> and <u>IRC Section R303.5.12</u>.44
 - 8.1.2 Performance in accordance with ASTM E84 (UL 723) for flame spread and smoke-development index ratings in accordance with <u>IBC Section 2603.3</u>, <u>IBC Section 2603.5.4</u>, and <u>IRC Section R303.3</u>.⁴⁵

- 8.1.3 Performance for use without a thermal barrier in accordance with <u>IBC Section 2603.9</u> per <u>IBC Section</u> <u>2603.4</u>, <u>IBC Section 2603.5.2</u>, and <u>IRC Section R303.6</u>⁴⁶ per <u>IRC Section R303.4</u>.⁴⁷
- 8.1.4 Performance with regard to the potential heat generated by the FPIS in accordance with <u>IBC Section</u> <u>2603.5.3</u>.
- 8.1.5 Performance with regard to vertical and lateral fire propagation in accordance with <u>IBC Section 2603.5.5</u>.
- 8.1.6 Performance with regard to ignition in accordance with <u>IBC Section 2603.5.7</u>.
- 8.1.7 Performance for use in exterior walls of buildings as a WRB in accordance with <u>IBC Section 1403.2</u> and <u>IRC Section R703.2</u>.
- 8.1.8 Performance for use in exterior walls of buildings as Continuous Insulation (ci) in accordance with <u>IECC</u> <u>Section C402.1.3</u>.
- 8.1.9 Performance in exterior walls of buildings as a vapor retarder in accordance with <u>IBC Section 202</u>, <u>IBC Section 1404.3</u>,⁴⁸ <u>IRC Section R202</u>, and <u>IRC Section R702.7</u>.
- 8.1.10 Performance for use in exterior walls of buildings as an air barrier in accordance with <u>IRC Section</u> <u>N1101.10.5</u>, <u>IECC Section R303.1.5</u>, and <u>IECC Section C402.6.2.3.1</u>.49
- 8.1.11 Other structural requirements in accordance with <u>IBC Chapter 16</u> are outside the scope of this report.
- 8.2 Any building code, regulation and/or accepted engineering evaluations (i.e., <u>research reports</u>, <u>duly</u> <u>authenticated reports</u>, etc.) that are conducted for this Listing were performed by DrJ, which is an <u>ISO/IEC</u> <u>17065 accredited certification body</u> and a professional engineering company operated by <u>RDP</u> or <u>approved</u> <u>sources</u>. DrJ is qualified⁵⁰ to practice product and regulatory compliance services within its <u>scope of</u> <u>accreditation and engineering expertise</u>,⁵¹ respectively.
- 8.3 Engineering evaluations are conducted with DrJ's ANAB <u>accredited ICS code scope</u> of expertise, which is also its areas of professional engineering competence.
- 8.4 Any regulation specific issues not addressed in this section are outside the scope of this report.

9 Installation

- 9.1 Installation shall comply with the approved construction documents, the manufacturer installation instructions, this report, and the applicable building code.
- 9.2 In the event of a conflict between the manufacturer installation instructions and this report, contact the manufacturer for counsel on the proper installation method.

9.3 Installation Procedure

- 9.3.1 Protect surrounding areas and surfaces from damage.
- 9.3.2 If wall assembly design calls for WRB installed over the base wall, ensure that the WRB is one of those identified in **Table 10** in **Appendix A** or **Table 17** in **Appendix B**, where applicable, and the WRB is installed correctly and in good condition before covering with FPIS.
- 9.3.3 For installation of FPIS on interior over air/water resistive barrier on base wall: ensure that the WRB is one of those identified in **Table 10** in **Appendix A** or **Table 17** in **Appendix B**, where applicable, and the WRB is installed correctly and in good condition before covering with FPIS.
- 9.3.4 FPIS shall not be applied over walls while they are vulnerable to water intrusion from above or behind.
- 9.3.5 Do not block flashing, weeps, or other drainage paths with FPIS.
- 9.3.6 Do not span expansion joints with FPIS.
- 9.3.7 During installation, take precautions to minimize moisture intrusion behind insulation.
- 9.3.8 Beginning at the base of the wall, apply horizontally using maximum board lengths to minimize number of joints.

- 9.3.9 Offset FPIS board joints in neighboring rows a minimum of 6". Do not form four-corner intersections.
- 9.3.10 Form a *"corner lock"* pattern by staggering vertical joints at inside and outside corners.
- 9.3.11 FPIS may be applied vertically, as required.
- 9.3.12 Pre-cut FPIS to fit openings and penetrations.
- 9.3.13 Cut with a knife using a square to guide the cut, or use a table saw.
- 9.3.14 Abut all joints tightly and ensure an overall flush, level surface.
- 9.3.15 Mechanically fasten using the fastening pattern as indicated.
 - 9.3.15.1 Space fasteners 12" o.c (305 mm) at the perimeter and 16" o.c. (406 mm) in the field.
 - 9.3.15.2 Set back perimeter fasteners 3/8" (9.5 mm) from board edges.
 - 9.3.15.3 Note for Exterior Application: Where Xci Foil Class A, Xci CG Class A, Xci Foil Class A Plus, and Xci 286 are installed by the same trade as the cladding or in close cooperation with that trade, cladding attachment hardware can supplement or replace the insulation fasteners and insulation adhesive. Cladding fasteners fulfilling the Xci Foil Class A, Xci Foil Class A Plus, Xci CG Class A, and Xci 286 attachment function shall be designed for this function. If the cladding attachment is 16" o.c. (406 mm) or closer and it tightly secures the insulation, no additional fastening or adhesive is required.
 - 9.3.15.4 Note for Interior Application: Where Xci Foil Class A, Xci CG Class A, Xci Foil Class A Plus, and Xci 286 are installed by the same trade as the interior drywall or in close cooperation with that trade, drywall attachment hardware can supplement or replace the insulation fasteners and insulation adhesive. Drywall fasteners fulfilling the Xci Foil Class A, Xci Foil Class A Plus, Xci CG Class A, and Xci 286 attachment function shall be designed for this function. If the drywall attachment is 16" o.c. (406 mm) or closer and it tightly secures the insulation, no additional fastening or adhesive is required.
- 9.3.16 When an approved adhesive is used, periodically verify adhesion. Properly installed adhesive applied to Xci Foil Class A, Xci CG Class A, Xci Foil Class A Plus, and Xci 286 will cohesively break the adhesive while still wet and destroy the substrate when dry.
 - 9.3.16.1 Consult the detailed manufacturer installation instructions for the proper adhesive pattern to maintain the drainage plane.
 - 9.3.16.2 When used in a NFPA 285 approved assembly, adhesives must be one of those listed in the tables found in **Appendix A** or **Appendix B**, where applicable.
- 9.3.17 Fill gaps greater than ¹/₈" (3 mm) between FPIS boards with expanding spray foam or butter edge of board with approved sealant and strike flush. Expanding spray foam may also be applied onto the FPIS board edges during installation.
- 9.3.18 Verify all materials are installed in accordance with current Hunter Panels, LLC published literature and local code requirements.
- 9.3.19 Additional information on the installation and detailing of Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 can be found at https://hunterpanels.com/products/
- 9.4 Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 as an Air and Water-Resistive Barrier
 - 9.4.1 When used in a NFPA 285 approved assembly as an air/water resistive barrier, see also **Section 6.3** and **Table 10** in **Appendix A** or **Table 17** in **Appendix B**, where applicable.
 - 9.4.2 When used in a NFPA 285 approved assembly as a WRB, see also **Section 6.4** and **Table 10** in **Appendix A** or **Table 17** in **Appendix B**, with all notes from **Table 11** or **Table 18**, where applicable.
 - 9.4.3 Use minimum 1" (25.4 mm) thickness Xci Foil Class A and Xci 286.

- 9.4.4 Install directly over wood or steel studs, or over exterior sheathing fastened to wood or steel studs.
- 9.4.5 Fasten Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 boards with corrosion-resistant screws or Heckmann Pos-I-Tie[®], either fitted with Thermal-Grip CI plastic washers by Rodenhouse or equivalent. Space fasteners 16" o.c. (406 mm) in the field and 12" o.c. (305 mm) at the perimeter.
 - 9.4.5.1 Other fastening used shall be installed 16" o.c. (406 mm) in the field and 12" o.c. (305 mm) at the perimeter. Other fastening shall be verified as air and water tight through ASTM E2357 and ASTM E331 testing, or it shall be sealed with caulk or flashing tape.
- 9.4.6 Tape over board joints with 4" (102 mm) width Aluma-GRIP 1402 tape by Carlisle Coatings & Waterproofing (CCW).
- 9.4.7 Cover inside and outside corners with Aluma-GRIP 701 by CCW. Aluma-GRIP 701 shall bear 3" (76 mm) minimum onto each side of angle.
- 9.4.8 Wrap window openings with Aluma-GRIP 701. Aluma-GRIP 701 shall wrap at least 3" (76 mm) onto wall and shall return far enough into the window opening to provide a continuous air/water seal to window frame.
- 9.4.9 Flash pipe and duct penetrations through Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 with Aluma-GRIP 701.
- 9.4.10 Consult Hunter Panels details and instructions for complete information about installation of Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 as an air and water-resistive barrier.
- 9.5 Xci Foil Class A, Xci 286, Xci Foil Class A Plus, and Xci CG Class A
 - 9.5.1 Refer to the manufacturer installation instructions, in addition to this report, for complete details and requirements.
 - 9.5.2 Cut with a knife using a square to guide the cut, or use a table saw.
 - 9.5.3 Abut all joints tightly and ensure an overall flush, level surface.
 - 9.5.4 Mechanically fasten using the fastening pattern as indicated.
 - 9.5.4.1 Space fasteners 12" o.c. (305 mm) at the perimeter and 16" o.c. (406 mm) in the field.
 - 9.5.4.2 Set back perimeter fasteners 3/8" (9.5 mm) from board edges.
 - 9.5.4.3 **Note:** Where Xci Foil Class A, Xci 286, Xci Foil Class A Plus, or Xci CG Class A are installed by the same trade as the cladding or in close cooperation with that trade, cladding attachment hardware can supplement or replace the insulation fasteners and insulation adhesive. Cladding fasteners fulfilling the Xci Foil Class A, Xci 286, Xci Foil Class A Plus, or Xci CG Class A attachment function shall be designed for this function. If the cladding attachment is 16" o.c. (406 mm) or closer and it tightly secures the insulation, no additional fastening or adhesive is required.
 - 9.5.5 When adhesive is used, periodically verify adhesion. Properly installed adhesively applied Xci Foil Class A, Xci 286, Xci Foil Class A Plus, or Xci CG Class A will cohesively break the adhesive while still wet and destroy the substrate when dry.
 - 9.5.6 Consult the detailed manufacturer installation instructions for the proper adhesive pattern to maintain the drainage plane.
- 9.6 Xci Ply Class A
 - 9.6.1 Refer to the manufacturer installation instructions, in addition to this report, for complete details and requirements.
 - 9.6.2 Provide separation of the edge of Xci Ply Class A from concrete at grade with pressure-treated lumber sill plate, sill gasket or non-permeable flashing material.
 - 9.6.3 Begin at base of wall from firm, permanent support.

- 9.6.4 Fasten Xci Ply Class A with proper fasteners and spacing to accommodate design. Fasten Xci Ply Class A to the structure using SIP fasteners or similar hardware driven into steel studs, wood studs, concrete or CMU substrate. Fastening shall be approved by a structural engineer, as the fastening must be sufficient to support both the weight of the Xci Ply Class A and the weight of the cladding for the project conditions.
- 9.6.5 Allow a minimum ¹/₈" (3.2 mm) and a maximum ¹/₄" (6.4 mm) gap between Xci Ply Class A boards to accommodate hydric movement of wood. Fasten boards tightly to provide a flush, level surface.
- 9.6.6 Apply WRB over plywood side of Xci Ply Class A according to WRB manufacturer instructions.

10 Substantiating Data

- 10.1 Testing has been performed under the supervision of a professional engineer and/or under the requirements of ISO/IEC 17025 as follows:
 - 10.1.1 Flame spread and smoke developed rating testing in accordance with ASTM E84 (UL 723)
 - 10.1.2 Fire performance criteria testing in accordance with NFPA 285
 - 10.1.3 Fire performance criteria testing in accordance with NFPA 286
 - 10.1.4 Fire performance criteria testing in accordance with UL 1715
 - 10.1.5 Potential heat testing in accordance with NFPA 259
 - 10.1.6 Air barrier material testing in accordance with ASTM E2178
 - 10.1.7 Air barrier assembly testing in accordance with ASTM E2357
 - 10.1.8 Vapor impermeability testing in accordance with ASTM E96 Method A and Method B
 - 10.1.9 Water-resistive barrier testing in accordance with ASTM E331
- 10.2 Information contained herein may include the result of testing and/or data analysis by sources that are <u>approved agencies</u>, <u>approved sources</u>, and/or an <u>RDP</u>. Accuracy of external test data and resulting analysis is relied upon.
- 10.3 Where applicable, testing and/or engineering analysis are based upon provisions that have been codified into law through state or local adoption of regulations and standards. The developers of these regulations and standards are responsible for the reliability of published content. DrJ's engineering practice may use a regulation-adopted provision as the control. A regulation-endorsed control versus a simulation of the conditions of application to occur establishes a new material as <u>being equivalent</u> to the regulatory provision in terms of quality, <u>strength</u>, effectiveness, <u>fire resistance</u>, durability, and safety.
- 10.4 The accuracy of the provisions provided herein may be reliant upon the published properties of raw materials, which are defined by the grade mark, grade stamp, mill certificate, or <u>duly authenticated reports</u> from <u>approved</u> <u>agencies</u> and/or <u>approved sources</u> provided by the supplier. These are presumed to be minimum properties and relied upon to be accurate. The reliability of DrJ's engineering practice, as contained in this <u>duly</u> <u>authenticated report</u>, may be dependent upon published design properties by others.
- 10.5 Testing and Engineering Analysis
 - 10.5.1 The strength, rigidity, and/or general performance of component parts and/or the integrated structure are determined by suitable tests that simulate the actual conditions of application that occur and/or by accepted engineering practice and experience.⁵²
- 10.6 Where additional condition of use and/or regulatory compliance information is required, please search for Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 on the <u>DrJ Certification</u> <u>website</u>.

11 Findings

- 11.1 As outlined in **Section 6**, Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 have performance characteristics that were tested and/or meet applicable regulations. In addition, they are suitable for use pursuant to its specified purpose.
- 11.2 When used and installed in accordance with this <u>duly authenticated report</u> and the manufacturer installation instructions, Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 shall be approved for the following applications:
 - 11.2.1 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are approved for use in exterior walls of buildings of any height of Type I-V construction in accordance with <u>IBC Section 2603.5</u> and <u>IRC Section R303.5.12</u>.⁵³
 - 11.2.2 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are approved for use in wall assemblies meeting the requirements of NFPA 285 testing when constructed in accordance with the tables in **Appendix A**.
 - 11.2.2.1 **Appendix B** may be used for local building codes based on 2018 IBC or earlier.
 - 11.2.3 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 comply with or are a suitable alternative to, the applicable sections of the codes listed in **Section 4**.
 - 11.2.4 Xci 286 and Xci Foil Class A, up to 3¹/₂" (88.9 mm) thick, are approved as a thermal barrier on walls only or ceilings only to NFPA 286, in accordance with <u>IBC Section 2603.9</u> and <u>IRC Section R303.6</u>,⁵⁴ and meets the criteria of <u>IBC Section 803.1.1</u>. Therefore, Xci 286 and Xci Foil Class A may be left exposed and require no thermal barrier or ignition barrier protection.
 - 11.2.5 Xci Foil Class A and Xci 286 up to 3¹/₂" (88.9 mm) thick are approved for use as an ignition barrier on walls and/or ceilings in attics and crawl spaces to NFPA 286 in accordance with <u>IBC Section 2603.9</u> and <u>IRC Section R303.6</u>, ⁵⁵ and meets the criteria of <u>IBC Section 803.1.1</u>. Therefore, Xci Foil Class A and Xci 286 require no ignition barrier protection in attics and crawl spaces.
 - 11.2.6 Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are approved for use in exterior walls of buildings as a WRB in accordance with <u>IBC Section 1403.2</u> and <u>IRC Section R703.2</u> when constructed in accordance with the manufacturer installation instructions and this report.
 - 11.2.7 Xci CG Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are approved for use in exterior walls of buildings as an air barrier in accordance with <u>IECC Section C402.6.1</u> when constructed in accordance with the manufacturer installation instructions and this report.
- 11.3 Unless exempt by state statute, when Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are to be used as a structural and/or building envelope component in the design of a specific building, the design shall be performed by an <u>RDP</u>.
- 11.4 Any application specific issues not addressed herein can be engineered by an <u>RDP</u>. Assistance with engineering is available from Hunter Panels, LLC.
- 11.5 <u>IBC Section 104.2.3⁵⁶ (IRC Section R104.2.2⁵⁷ and IFC Section 104.2.3⁵⁸ are similar) in pertinent part state:</u>

104.2.3 Alternative Materials, Design and Methods of Construction and Equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative is not specifically prohibited by this code and has been approved.

- 11.6 Approved: 59 Building regulations require that the building official shall accept duly authenticated reports. 60
 - 11.6.1 An <u>approved agency</u> is "approved" when it is <u>ANAB ISO/IEC 17065 accredited</u>.
 - 11.6.2 An <u>approved source</u> is *"approved"* when an <u>RDP</u> is properly licensed to transact engineering commerce.
 - 11.6.3 Federal law, <u>Title 18 US Code Section 242</u>, requires that, where the alternative product, material, service, design, assembly, and/or method of construction is not approved, the building official shall respond in writing, stating the reasons why the alternative was not approved. Denial without written reason deprives a protected right to free and fair competition in the marketplace.
- 11.7 DrJ is a licensed engineering company, employs licensed <u>RDP</u>s and is an <u>ANAB Accredited Product</u> <u>Certification Body</u> – <u>Accreditation #1131</u>.
- 11.8 Through the <u>IAF Multilateral Arrangement</u> (MLA), this <u>duly authenticated report</u> can be used to obtain product approval in any <u>jurisdiction</u> or <u>country</u> because all ANAB ISO/IEC 17065 <u>duly authenticated reports</u> are equivalent.⁶¹

12 Conditions of Use

- 12.1 Material properties shall not fall outside the boundaries defined in Section 6.
- 12.2 As defined in **Section 6**, where material and/or engineering mechanics properties are created for load resisting design purposes, the resistance to the applied load shall not exceed the ability of the defined properties to resist those loads using the principles of accepted engineering practice.
- 12.3 As listed herein, Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 shall not be used:
 - 12.3.1 To resist lateral loads. Walls shall be braced by other materials in accordance with the applicable code. The exterior wall covering shall be capable of resisting the full design wind pressure.
- 12.4 This report and the installation instructions, when required by a code official, shall be submitted at the time of permit application.
- 12.5 When the insulation boards are used in assemblies requiring compliance with NFPA 285 and are installed on the exterior side of exterior walls, construction must be as described in **Appendix A** or **Appendix B**, where applicable.
- 12.6 When the insulation boards are used in assemblies requiring compliance with NFPA 285 and are installed on the interior side of exterior walls, construction must be as described in **Table 9** in **Appendix A**.
- 12.7 Xci Ply Class A may be used as a nail base provided cladding attachments are designed in accordance with <u>IRC Section R703.3.3</u>, or an approved design.
 - 12.7.1 Xci CG Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 shall not be used as a nail base.
- 12.8 When installed in areas where the probability of termite infestation is *"very heavy"*, the installation must meet the requirements of <u>IBC Section 2603.8</u> and <u>IRC Section R303.7</u>.⁶²
- 12.9 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 are available in Montgomery, New York; Tooele, Utah; Terrell, Texas; Smithfield, Pennsylvania; Franklin Park, Illinois; Puyallup, Washington; Lake City, Florida and Sikeston, Missouri, and are manufactured in Montgomery, New York; Tooele, Utah; Terrell, Texas; Franklin Park, Illinois; Puyallup, Washington; Lake City, Florida and Sikeston, Missouri under a quality control program with quality control inspections in accordance with <u>IBC Section</u> <u>110.3.10</u>,⁶³ IBC Section 110.3.11⁶⁴ and IRC Section R109.1.5.
- 12.10 The wall assemblies listed in Appendix A are based on compliance to the fire provisions of the codes listed in Section 4. Consideration of wall assembly performance with regard to other attributes, such as water vapor control, condensation, and energy code requirements are outside the scope of this report.

- 12.11 When required by adopted legislation and enforced by the <u>building official</u>, also known as the Authority Having Jurisdiction (AHJ) in which the project is to be constructed:
 - 12.11.1 Any calculations incorporated into the construction documents shall conform to accepted engineering practice and, when prepared by an <u>approved source</u>, shall be approved when signed and sealed.
 - 12.11.2 This report and the installation instructions shall be submitted at the time of <u>permit</u> application.
 - 12.11.3 These innovative products have an internal quality control program and a third-party quality assurance program.
 - 12.11.4 At a minimum, these innovative products shall be installed per Section 9.
 - 12.11.5 The review of this report by the AHJ shall comply with IBC Section 104.2.3.2 and IBC Section 105.3.1.
 - 12.11.6 These innovative products have an internal quality control program and a third party quality assurance program in accordance with IBC Section 104.7.2, IBC Section 110.4, IBC Section 1703, IRC Section R104.7.2, and IRC Section R109.2.
 - 12.11.7 The application of these innovative products in the context of this report is dependent upon the accuracy of the construction documents, implementation of installation instructions, inspection as required by <u>IBC</u> <u>Section 110.3</u>, <u>IRC Section R109.2</u>, and any other regulatory requirements that may apply.
- 12.12 The approval of this report by the AHJ shall comply with <u>IBC Section 1707.1</u>, where legislation states in part, *"the <u>building official</u> shall make, or cause to be made, the necessary tests and investigations; or the <u>building</u> <u>official</u> shall accept duly authenticated reports from <u>approved agencies</u> in respect to the quality and manner of use of new materials or assemblies as provided for in <u>Section 104.2.3</u>", all of <u>IBC Section 104</u>, and <u>IBC Section 105.3</u>.*
- 12.13 <u>Design loads</u> shall be determined in accordance with the regulations adopted by the jurisdiction in which the project is to be constructed and/or by the building designer (i.e., <u>owner</u> or <u>RDP</u>).
- 12.14 The actual design, suitability, and use of this report for any particular building, is the responsibility of the owner or the authorized agent of the <u>owner</u>.

13 Identification

- 13.1 The innovative products listed in **Section 1.1** are identified by a label on the board or packaging material bearing the manufacturer name, product name, this report number, and other information to confirm code compliance.
- 13.2 Additional technical information can be found at <u>www.hunterpanels.com</u>.

14 Review Schedule

- 14.1 This report is subject to periodic review and revision. For the latest version, visit <u>www.drjcertification.org</u>.
- 14.2 For information on the status of this report, please contact DrJ Certification.

Appendix A For Compliance with NFPA 285-19

Table 5. NFPA 285 Approved Wall Assemblies with Xci Foil Class A or Xci 286 Exterior Insulation^{1,3}

Wall Component	Materials
Base Wall System Use either 1,2, 3, or 4	 Cast Concrete walls CMU concrete walls 25-gauge minimum 3⁵/₈" (minimum) steel studs spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Lateral bracing every 4' Fire-Retardant Treated Wood (FRTW) studs: minimum nominal 2" x 4" dimension, spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Bracing as required by code
Fire-Stopping at Floor Lines	 Any approved mineral-fiber-based safing insulation in each stud cavity at floor line. Safing thickness must match stud cavity depth. Solid FRTW fire blocking at floor line in accordance with building code requirements for Type III construction.
Cavity Insulation Use any item 1 – 6	 None 11/2" (maximum) of Carlisle SPI SealTite PRO, SealTite PRO Closed Cell, or SealTite PRO One Zero Any noncombustible insulation per ASTM E136 Any mineral fiber (Board type faced or unfaced) Any fiberglass (Batt type faced or unfaced) 31/4" (maximum) Carlisle SPI SealTite Pro, SealTite PRO Closed Cell or SealTite PRO One Zero – only with Exterior Sheathing 2
<i>Exterior Sheathing</i> Use either 1, 2, or 3	 None (only with cavity insulation 1, 2, 3, 4, or 5 and Cladding 1-6 and 3¹/₂" (maximum) Xci-Foil Class A 1/₂" or thicker exterior gypsum sheathing 1/₂" (minimum) FRTW structural panels in Type III construction
Multi-Function Sheathing and WRB Products Use 1 or 2	 USG Securock Exoair 430 System – See note and Table 10 ⁵/₈" Georgia Pacific DensElement, flashed with Prosoco R-Guard FastFlash on sheathing joints Note: Item 1 or 2 replaces the exterior sheathings above. When either of these items are used, do not use exterior sheathings or WRBs on base wall surface in Table 10
WRB Over Base Wall Surface	1. See Table 10
Exterior Insulation Use either 1 or 2 depending on cladding Note: A construction which utilizes no exterior sheathing may not use spray foam cavity insulation	 3¹/₂" thick (maximum) Xci Foil Class A or Xci-286 for all claddings 4" thick Xci Foil Class A or Xci-286 for claddings 1 - 6

Table 5. NFPA 285 Approved Wall Assemblies with Xci Foil Class A or Xci 286 Exterior Insulation^{1,3}

Wall Component	Materials
WRB Over Exterior Insulation	 See Table 10 Note: The exterior insulation may be used with or without CavClear Masonry Mat over the insulation with a maximum 1" air gap between the CavClear and the cladding. When CavClear is used, this may only be used with Cladding 1, 2, 3, 4, 5, or 6 or with thin brick/thin stone adhered to stucco as long as the total thickness is 3/4" minimum.
Exterior Cladding Use any items 1 – 16 Maximum Air Gap 2" for Claddings 1 - 6. maximum Air Gap 11/2" for Claddings 7-16. If Claddings 2, 3, 4, 5, 11, 12, or 14 are on stucco base with lath, a secondary WRB (WRB items above allowed over foam) can be installed between the insulation and lath and must not be full coverage asphalt or self-adhering membranes, but may be slip sheet (stapled) with no adhesive. Armatherm Z Girts may be used horizontally in Hunter assemblies	 Brick – Nominal 4" thick, clay or concrete brick or veneer with maximum 2" air gap behind the brick. Brick ties/Anchors 24" o.c. (maximum). Stucco – Minimum ³/₄" thick, exterior cement plaster and lath (with approved WRB over exterior insulation as listed above) Limestone – Minimum 2" thick using any standard non-open joint installation technique such as shiplap. Natural stone veneer – Minimum 2" thick using any standard non-open joint installation technique such as grouted/mortared stone. Cast Artificial Stone – Minimum 11/₂" thick complying with ICC-ES AC 51 using any standard non-oper joint installation technique such as shiplap. Terra Cotta Cladding – Minimum 11/₄" thick (solid or equivalent by weight) using any standard open or non-open joint installation technique such as shiplap. Any ACM or MCM that has passed NFPA 285 with foam of comparable thickness. Uninsulated sheet metal building panels including steel, copper, aluminum. 1/₄" (minimum) uninsulated fiber-cement siding, or porcelain or ceramic tile mechanically attached. Autoclaved-aerated-concrete (AAC) panels that have successfully passed NFPA 285 criteria. Thin brick/cultured stone set in thin set adhesive and metal lath. Glen Gery Thin Tech Elite Series Masonry Veneer or TABS II Panel System with 1/₂" thick bricks using TABS Wall Adhesive. Terra Cotta Cladding – Any Rain-screen Terra Cotta (minimum 1/₂" thick) with ventilated shiplap. 1/₂" Stucco – Any one-coat stucco (1/₂" minimum) that meets AC11 acceptance criteria. Natural Stone Veneer – minimum 11/₄" thick using any standard installation technique.

- here for substitution of products is based on testing and professional thermal engineering analysis.
- 3. T_{ign} is the time to ignition from the start of the test until the sheathing ignites. Pk. HRR is the peak heat release rate during the test.

Table 6. NFPA 285 Approved Wall Assemblies with Xci CG Class A Exterior Insulation^{1,3}

Wall Component	Materials
Base Wall System Use either 1, 2, 3, or 4	 Cast concrete walls CMU concrete walls 25-gauge minimum 3⁵/₈" steel studs spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Lateral bracing every 4' FRTW studs: Minimum nominal 2" x 4" dimension, spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Bracing as required by building code
<i>Fire-Stopping at</i> <i>Floor Lines</i> Use item 1 or 2	 Any approved mineral-fiber-based safing insulation in each stud cavity at floor line. Safing thickness must match stud cavity depth. Solid FRTW fire blocking at floor line in accordance with building code requirements for Type III construction.
Cavity Insulation Use any item 1 - 6	 None. 11/2" (maximum) of Carlisle SPI SealTite PRO, SealTite PRO Closed Cell, or SealTite PRO One Zero Any noncombustible insulation per ASTM E136 Any mineral fiber (Board type Class A ASTM E84 faced or unfaced) Any fiberglass (Batt type Class A ASTM E84 faced or unfaced) 31/4" (maximum) of Carlisle SPI SealTite PRO, SealTite PRO Closed Cell, or SealTite PRO One Zero only with Sheathing 2 None.
<i>Exterior Sheathing</i> Use either 1, 2, or 3	 None (only with claddings 1 - 6, and cavity insulation 1, 3, 4, or 5). 1/2" or thicker exterior gypsum sheathing 1/2" (minimum) FRTW structural panels in Type III construction
Multi-Function Sheathing and WRB Products Use 1 or 2	 USG Securock Exoair 430 System – See note and Table 10 5/8" Georgia Pacific DensElement, flashed with Prosoco R-Guard FastFlash on sheathing joints. Note: Item 1 or 2 replaces the exterior sheathings above. When either of these items are used, do not use exterior sheathings or WRBs on base wall surface in Table 10.
WRB Over Base Wall Surface	1. See Table 10.
Exterior Insulation Use either 1 or 2, depending on cladding	 4" thick (maximum) Xci CG Class A for claddings 1 - 6. 3¹/₂" thick (maximum) Xci CG Class A for claddings 7 - 16 (with special Opening Perimeter).
WRB Over Exterior Insulation	 See Table 10. Note: The exterior insulation may be used with or without CavClear Masonry Mat over the insulation with a maximum 1" air gap between the CavClear and the cladding. When CavClear is used, this may only be used with Cladding 1, 2, 3, 4, 5, or 6 or with thin brick/thin stone adhered to stucco as long as the total thickness is ³/₄" minimum.

Table 6. NFPA 285 Approved Wall Assemblies with Xci CG Class A Exterior Insulation^{1,3}

Wall Component	Materials
Exterior Cladding Use any item 1 – 16	1. Brick – Nominal 4" thick, clay or concrete brick or veneer with maximum 2" air gap behind the brick. Brick ties/Anchors 24" o.c. (maximum).
Cladding 1 - 6 for 4" (maximum) insulation thickness	 Stucco – Minimum ³/₄" thick, exterior cement plaster and lath (with approved WRB over exterior insulation as listed above).
Cladding 7 - 16 for 3 ¹ / ₂ " (maximum) insulation thickness	3. Limestone – Minimum 2" thick using any standard non-open joint installation technique such as shiplap.
with special opening perimeter Maximum Air Gap 2" for Claddings 1 - 6.	4. Natural stone veneer – Minimum 2" thick using any standard non-open joint installation technique such as grouted/mortared stone.
Maximum Air Gap 1 ¹ / ₂ " for Claddings 7 - 16.	 Cast Artificial Stone – Minimum 1¹/₂" thick complying with ICC-ES AC 51 using any standard non-open joint installation technique such as shiplap.
If Claddings 2, 3, 4, 5, 11, 12, or 14 are on stucco base with lath, a	6. Terra Cotta Cladding – Minimum 1 ¹ / ₄ " thick (solid or equivalent by weight) using any standard open or non-open joint installation technique such as shiplap.
secondary WRB (WRB items above allowed over foam) can be	7. Any ACM or MCM that has passed NFPA 285 with foam of comparable thickness.
installed between the insulation	8. Uninsulated sheet metal building panels including steel, copper, aluminum.
and lath and must not be full coverage asphalt or self-adhering	9. 1/4" (minimum) uninsulated fiber-cement siding, or porcelain or ceramic tile mechanically attached.
membranes, but may be slip sheet	10. Autoclaved-Aerated-Concrete (AAC) panels that have successfully passed NFPA 285 criteria.
(stapled) with no adhesive.	11. Thin brick/cultured stone set in thin set adhesive and metal lath.
Armatherm Z Girts may be used horizontally in Hunter assemblies	12. Glen Gery Thin Tech Elite Series Masonry Veneer or TABS II Panel System with 1/2" thick bricks using TABS Wall Adhesive.
	13. Terra Cotta Cladding – Any Rain-screen Terra Cotta (minimum 1/2" thick) with ventilated shiplap.
	14. 1/2" Stucco – Any one-coat stucco (1/2" minimum) that meets AC11 acceptance criteria.
	15. Natural Stone Veneer – minimum 1 ¹ / ₄ " thick using any standard installation technique.
	16. AFC Terraslat by Tonality – Tonality Classic26 or Tonality Classic22
Special Opening Perimeter	 Tested Opening – 2 layers ⁵/₈" gypsum, with 18-gauge steel flashing at header and 1 layer ⁵/₈" and 18-gauge Galvanized Steel Flashing at jambs and still.
Use with Claddings 7 - 16	 2. 2" mineral wool 4 lb density
	3. 1 ¹ / ₂ " thick FRT wood buck
	4. Two layers of ³ / ₄ " FRT Plywood

SI: 1 in = 25.4 mm

1. The assemblies' combinations created herein and the various substitutions of products are based on testing and professional thermal engineering analysis.

2. Acceptance criteria for ASTM E1354 testing have not been well established in the referenced building codes and foam sheathing related sections. The criteria stated here for substitution of products is based on testing and professional thermal engineering analysis.

3. T_{ign} is the time to ignition from the start of the test until the sheathing ignites. Pk. HRR is the peak heat release rate during the test.

Table 7. NFPA 285 Approved Wall Assemblies with Xci Ply Class A Exterior Insulation^{1,3}

Wall Component	Materials
Base Wall System Use either 1, 2, 3, or 4	 Cast concrete walls CMU concrete walls 25-gauge minimum 3⁵/₈" (minimum) steel studs spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Lateral bracing every 4' FRTW studs: minimum nominal 2" x 4" dimension, spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Bracing as required by code
<i>Fire-Stopping at</i> <i>Floor Lines</i> Use item 1 or 2	 Any approved mineral-fiber-based safing insulation in each stud cavity at floor line. Safing thickness must match stud cavity depth. Solid FRTW fire blocking at floor line in accordance with building code requirements for Type III construction.
<i>Cavity Insulation</i> Use any item 1 - 6	 None 11/2" (maximum) of Carlisle SPI SealTite PRO, SealTite PRO Closed Cell, or SealTite PRO One Zero Any noncombustible insulation per ASTM E136 Any mineral fiber (Board type Class A ASTM E84 faced or unfaced) Any fiberglass (Batt type Class A ASTM E84 faced or unfaced) 31/4" (maximum) of Carlisle SPI SealTite PRO, SealTite PRO Closed Cell, or SealTite PRO One Zero – only with Sheathing 2
<i>Exterior Sheathing</i> Use either 1, 2, or 3	 None (only with Claddings 1 - 6 and cavity insulation 1, 3, 4, or 5). Also see note for Cavity Insulation 1/2" or thicker exterior gypsum sheathing 1/2" (minimum) FRTW structural panels in Type III construction
Multi-Function Sheathing and WRB Products Use 1 or 2	 USG Securock Exoair 430 System – See note and Table 10 ⁵/8" Georgia Pacific DensElement, flashed with Prosoco R-Guard FastFlash on sheathing joints Note: Item 1 or 2 replaces the exterior sheathings above. When either of these items are used, do not use exterior sheathings or WRBs on base wall surface in Table 10.
WRB Over Base Wall Surface	1. See Table 10
Exterior Insulation Use either 1 or 2, depending on cladding	 4¹/₄" thick (maximum) Xci Ply Class A (3¹/₂" foam maximum, ³/₄" FR Plywood maximum) with Claddings 7 - 16 (with special Opening Perimeter) 4³/₄" thick (maximum) Xci Ply Class A (4" foam maximum, ³/₄" FR Plywood maximum) may be used with claddings 1 - 6.
WRB Over Exterior Insulation Only with Claddings 1 - 6	 See Table 10 Note: The exterior insulation may be used with or without CavClear Masonry Mat over the insulation, with a maximum 1" air gap between the CavClear and the cladding. When CavClear is used, this may only be used with Cladding 1 - 6 or with thin brick/thin stone adhered to stucco as long as the total thickness is 3/4" minimum.

Table 7. NFPA 285 Approved Wall Assemblies with Xci Ply Class A Exterior Insulation^{1,3}

Wall Component	Materials
Exterior Cladding Use any item 1 – 16	 Brick – Nominal 4" thick, clay or concrete brick or veneer with maximum 2" air gap behind the brick. Brick ties/Anchors 24" o.c. (maximum)
Cladding 7 - 16 for 31/2" (maximum) insulation thickness	 Stucco – Minimum ³/₄" thick, exterior cement plaster and lath (with approved WRB over exterior insulation as listed above)
with special opening perimeter. Maximum Air Gap 2" for Cladding 1 – 6.	 Limestone – Minimum 2" thick using any standard non-open joint installation technique such as shiplap
Cladding 7 - 16 for 31/2" (maximum) insulation thickness	 Natural stone veneer – Minimum 2" thick using any standard non-open joint installation technique such as grouted/mortared stone
with special opening perimeter Maximum Air Gap 2" for Claddings	 Cast Artificial Stone – Minimum 1¹/₂" thick complying with ICC-ES AC 51 using any standard non-open joint installation technique such as shiplap
1 - 6. Maximum Air Gap 1 ¹ /2" for Claddings 7 - 16.	 Terra Cotta Cladding – Minimum 1¹/₄" thick (solid or equivalent by weight) using any standard open or non-open joint installation technique such as shiplap
If Claddings 2, 3, 4, 5, 11, 12, or	Any ACM or MCM that has passed NFPA 285 with foam of comparable thickness
14 are on stucco base with lath, a	Uninsulated sheet metal building panels including steel, copper, aluminum
secondary WRB (WRB items above allowed over foam) can be	9. 1/4" (minimum) uninsulated fiber-cement siding, or porcelain or ceramic tile mechanically attached
installed between the insulation	10. Autoclaved-Aerated-Concrete (AAC) panels that have successfully passed NFPA 285 criteria
and lath and must not be full coverage asphalt or self-adhering	11. Thin brick/cultured stone set in thin set adhesive and metal lath
membranes, but may be slip sheet (stapled) with no adhesive.	 Glen Gery Thin Tech Elite Series Masonry Veneer or TABS II Panel System with 1/2" thick bricks using TABS Wall Adhesive
Armatherm Z Girts may be used horizontally in Hunter assemblies	13. Terra Cotta Cladding – Any Rain-screen Terra Cotta (minimum 1/2" thick) with ventilated shiplap
nonzontany in namer assemblies	14. 1/2" Stucco – Any one-coat stucco (1/2" minimum) that meets AC11 acceptance criteria
	15. Natural Stone Veneer – minimum 11/4" thick using any standard installation technique
	16. AFC Terraslat by Tonality – Tonality Classic26 or Tonality Classic22
Special Opening Perimeter	 Tested Opening – 2 layers ⁵/₈" gypsum, with 18-gauge > steel flashing at header and 1 layer ⁵/₈" and 18-gauge Galvanized Steel Flashing at jambs and still
Use with Claddings 7 - 16	2. 2" mineral wool 4 lb density
	3. 11/2" thick FRT wood buck
	4. Two layers of ³ / ₄ " FRT Plywood

SI: 1 in = 25.4 mm

1. The assembly combinations created herein and the various substitutions of products are based on testing and professional thermal engineering analysis.

2. Acceptance criteria for ASTM E1354 testing have not been well established in the referenced building codes and foam sheathing related sections. The criteria stated here for substitution of products is based on testing and professional thermal engineering analysis.

3. T_{ign} is the time to ignition from the start of the test until the sheathing ignites. Pk. HRR is the peak heat release rate during the test.

Table 8. NFPA 285 Approved Wall Assemblies with Xci Foil Class A Plus Exterior Insulation^{1,3}

Wall Component	Materials
Base Wall System Use either 1, 2, 3, or 4	 Cast concrete walls CMU concrete walls 25-gauge minimum 3⁵/₈" (minimum) steel studs spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Lateral bracing every 4' FRTW studs: minimum nominal 2" x 4" dimension, spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Bracing as required by code
<i>Fire-Stopping at</i> <i>Floor Lines</i> Use item 1 or 2	 Any approved mineral-fiber-based safing insulation in each stud cavity at floor line. Safing thickness must match stud cavity depth. Solid FRTW fire blocking at floor line in accordance with building code requirements for Type III construction.
<i>Cavity Insulation</i> Use any item 1 - 6	 None 11/2" (maximum) of Carlisle SPI SealTite PRO, SealTite PRO Closed Cell, or SealTite PRO One Zero Any noncombustible insulation per ASTM E136 Any mineral fiber (Board type Class A ASTM E84 faced or unfaced) Any fiberglass (Batt type Class A ASTM E84 faced or unfaced) 31/4" (maximum) of Carlisle SPI SealTite PRO, SealTite PRO Closed Cell, or SealTite PRO One Zero only with Sheathing 2 Any mineral fiber (Board type Class A ASTM E84 faced or unfaced)
<i>Exterior Sheathing</i> Use either 1, 2, or 3	 None (only with cavity insulation 1, 2, 3, 4, 5, or 6) 1/2" or thicker exterior gypsum sheathing 1/2" (minimum) FRTW structural panels in Type III construction
Multi-Function Sheathing and WRB Products Use 1 or 2	 USG Securock Exoair 430 System – See note and Table 10 5/8" Georgia Pacific DensElement, flashed with Prosoco R-Guard FastFlash on sheathing joints Note: Item 1 or 2 replaces the exterior sheathings above. When either of these items are used, do not use exterior sheathings or WRBs on base wall surface in Table 10.
WRB Over Base Wall Surface	1. See Table 10
Exterior Insulation Use either 1 or 2, depending on cladding	1. 4" thick (maximum) Xci Foil Class A Plus for all claddings listed
WRB Over Exterior Insulation Only with Claddings 1 - 6	 See Table 10 Note: The exterior insulation may be used with or without CavClear Masonry Mat over the insulation, with a maximum 1" air gap between the CavClear and the cladding. When CavClear is used, this may only be used with Cladding 1 - 6 or with thin brick/thin stone adhered to stucco as long as the total thickness is 3/4" minimum.

Table 8. NFPA 285 Approved Wall Assemblies with Xci Foil Class A Plus Exterior Insulation^{1,3}

Wall Component		Materials
<i>Exterior Cladding</i> Use any item 1 – 16	1.	Brick – Nominal 4" thick, clay or concrete brick or veneer with maximum 2" air gap behind the brick. Brick ties/Anchors 24" o.c. (maximum)
Cladding 7 - 16 for 31/2" (maximum) insulation thickness with special opening perimeter.	2.	Stucco – Minimum ³ / ₄ " thick, exterior cement plaster and lath (with approved WRB over exterior insulation as listed above)
Maximum Air Gap 2" for Cladding $1 - 6$.	3.	Limestone – Minimum 2" thick using any standard non-open joint installation technique such as shiplap
Cladding 7 - 16 for 3 ^{1/} 2" (maximum) insulation thickness	4.	Natural stone veneer – Minimum 2" thick using any standard non-open joint installation technique such as grouted/mortared stone
with special opening perimeter Maximum Air Gap 2" for Claddings	5.	Cast Artificial Stone – Minimum 1 ¹ / ₂ " thick complying with ICC-ES AC 51 using any standard open or non-open joint installation technique such as shiplap
1 - 6. Maximum Air Gap 1 ¹ /2" for Claddings 7 - 16.	6.	Terra Cotta Cladding – Minimum 1 ¹ /4" thick (solid or equivalent by weight) using any standard open or non-open joint installation technique such as shiplap
If Claddings 2, 3, 4, 5, 11, 12, or 14 are on stucco base with lath, a	7.	Any ACM or MCM that has passed NFPA 285 with foam of comparable thickness
	8.	Uninsulated sheet metal building panels including steel, copper, aluminum
secondary WRB (WRB items above allowed over foam) can be	9.	1/4" (minimum) uninsulated fiber-cement siding, or porcelain or ceramic tile mechanically attached
installed between the insulation	10.	Autoclaved-Aerated-Concrete (AAC) panels that have successfully passed NFPA 285 criteria
and lath and must not be full coverage asphalt or self-adhering	11.	Thin brick/cultured stone set in thin set adhesive and metal lath
membranes, but may be slip sheet (stapled) with no adhesive.	12.	Glen Gery Thin Tech Elite Series Masonry Veneer or TABS II Panel System with $^{1}\!/_{2}$ " thick bricks using TABS Wall Adhesive
Armatherm Z Girts may be used horizontally in Hunter assemblies	13.	Terra Cotta Cladding – Any Rain-screen Terra Cotta (minimum 1/2" thick) with ventilated shiplap
nonzontally in numer assemblies	14.	1/2" Stucco – Any one-coat stucco (1/2" minimum) that meets AC11 acceptance criteria
	15.	Natural Stone Veneer – minimum 11/4" thick using any standard installation technique
	16.	AFC Terraslat by Tonality – Tonality Classic26 or Tonality Classic22
Special Opening Perimeter	1.	Tested Opening – 2 layers ⁵ /s" gypsum, with 18-gauge > steel flashing at header and 1 layer ⁵ /s" and 18-gauge Galvanized Steel Flashing at jambs and still
Use with Claddings 7 - 16	2.	2" mineral wool 4 lb density
	3.	1 ¹ / ₂ " thick FRT wood buck
	4.	Two layers of 3/4" FRT Plywood

SI: 1 in = 25.4 mm

1. The assembly combinations created herein and the various substitutions of products are based on testing and professional thermal engineering analysis.

2. Acceptance criteria for ASTM E1354 testing have not been well established in the referenced building codes and foam sheathing related sections. The criteria stated here for substitution of products is based on testing and professional thermal engineering analysis.

3. T_{ign} is the time to ignition from the start of the test until the sheathing ignites. Pk. HRR is the peak heat release rate during the test.

Table 9. NFPA 285 Approved Mass Wall Assemblies with Xci as Interior Insulation^{1,4}

Wall Component	Materials
Base Wall System Use either 1, 2, 3, or 4	 Cast concrete walls (minimum 2" thick) CMU concrete walls (minimum 4" thick)
Exterior Coating Use item 1, 2, 3, or 4	 Portland cement or lime stucco Any ASTM E84 Class A Paint or Elastomeric Coating Any ASTM E84 Class A Clear Sealer None
Air/Vapor Barrier Membrane Position 1 ² Over Base Wall Interior Note: Some WRBs are only allowed with specific systems	1. See Table 10 – WRB over Base Wall Surface
Continuous Insulation Use either 1, 2, or 3	 Xci Foil Class A or Xci 286, 3¹/₂" thick (maximum)⁵ Xci CG Class A or Xci CG, 3¹/₂" thick (maximum) Xci Foil, 3¹/₂" thick (maximum)
Air/Vapor Barrier Membrane Position 2 ³ Over Insulation Note: Some WRBs are only allowed with specific systems	 See Table 10 – WRB over Base Wall Surface Note: Insulation joints may be taped with Foil-Grip 1402, 4" width (maximum).
Interior Cladding	 5/8" type X interior gypsum sheathing installed directly over the insulation or installed to 35/8" (maximum depth) studs, or Metal Hat or Z Furring directly (no gap between stud/hat/Z and insulation). If an air gap between the stud/hat/Z and insulation is created, fire blocking with mineral wool per <u>IBC</u> <u>Section 718</u> shall be installed.
	2. Mass wall designs are assumed to use platform construction (concrete floor line intersects exterior concrete creating a firestop at floor lines). If the floor line is separated from the exterior concrete, fireblocking with mineral wool must be installed to prevent uncontrolled vertical flame spread.
SI: 1 in = 25.4 mm	

The assembly combinations created herein and the various substitutions of products are based on testing and professional thermal engineering analysis. 1.

2. Position 1 - Air vapor barrier installed directly on interior side of the base wall system.

3. Position 2 – Air vapor barrier installed over continuous insulation on interior side of the wall assembly.

4. CCW Membrane used in Position 1 or 2, not both.

5. Xci Foil Class A or Xci 286 insulation can be tacked in place with CAV-Grip or Travel-Tack during installation. Follow instructions on product data sheet.

used:	ed for use in wall asser	for fenestration, including Through-Wall Flashing (TWF), are not considered part of the WRB (ref: <u>2015 IBC Section 1405.4</u>). TWF is nblies clad with masonry or stone at the base of wall, head of wall, relieving angle, window head, windowsill, and at other interruptions II be applied a maximum of 8" onto the back-up wall and terminate at daylight or onto a drip edge. The following TWF products may be
a. Co		rface preparation as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV _ow VOC EPDM Primer per instructions on Product Data Sheet)
	• •	F loose-laid or adhered with SURE-SEAL 90-8-30A bonding Adhesive or SURE-SEAL Low VOC Bonding Adhesive
	letal TWF by others	
		ver Fire-Resist 705 RS at membrane splices, terminations, and penetrations. Fire-Resist 705 RS and the substrate may be treated with V-702 WB or Low VOC Travel-Tack to promote adhesion of BRT-801
		ed in the following applications:
		ion, while another approved WRB is used over the base wall assembly.
		e wall assembly while no exterior insulation is used. Use only WRBs listed below:
i.		
ii.	. Other WRBs that	produce no ignition when tested per ASTM E1354 at a heat flux of 50 kW/m².
		noncombustible substrate can be used for mitigating thermal bridging at wall assembly terminations and penetrations. Coating applied all percentage of the total wall surface area. The following products are allowed:
a. Ae	erolon 945 tape with p	rimer by Tnemec
b. Ae		

Table 11. Table Notes

- *Note 1:* The following adhesives may be used to attach the polyisocyanurate (polyiso) insulation.
 - 1. Adhesive applied discontinuously at a rate of 3/8" x 3" dabs, 16" OC: LM 800 XL or BarriBond or BarriBond XL
 - 2. Aerosol adhesive at the application rate as per mfg. instructions: CAV-GRIP or Low VOC Travel-Tack

Note 2: The following may be used as a gap-filler between insulation panels: FOMO HandiFoam Fireblock or TVM Fireblock

Note 3: These CCW detailing materials may be used over the base wall assembly and alone or with any approved WRB for the construction.

- 1. Board Joint Treatments:
 - a. 2" x 40 mil ribbon of BarriBond or BarriBond XL
 - b. 4" DCH Reinforcing Fabric embedded in Fire-Resist Barritech VP/NP/NP LT or embedded in Fire Resist Barrithane VP
 - c. 4" Foil-GRIP 1402*
 - d. 4" AlumaGRIP 701*
- Termination Mastic for Flashing/Membrane: 1" X 40 mil ribbon or tooled ³/₈" bead of SURE-SEAL Lap Sealant, CCW-704, LM 800 XL, BarriBond, or BarriBond XL
- 3. Detail Flashing, 3" on each side at Openings, Terminations, Penetrations, Transitions, and Angle Changes
 - a. CCW-705/XLT*, CCW-705 TWF/XLT*, or Fire Resist 705 FR-A/XLT*
 - b. SURE-SEAL P/S Elastoform* or SURE-SEAL P/S Cover Strip*
 - c. LiquiFiber or DCH Reinforcing Fabric embedded in Barritech VP/NP/NP LT
 - d. 40 mil application of BarriBond, BarriBond XL, or Barrithane VP
- Prepare the surface as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV-GRIP, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet.

Note 4: These CCW detailing materials may be used over the polyiso insulation and alone or with any approved WRB for the assembly.

- 1. Board Joint Treatments:
 - a. 2" x 40 mil ribbon of BarriBond or BarriBond XL
 - b. 4" DCH Reinforcing Fabric embedded in Fire-Resist Barritech VP/NP/NP LT or embedded in Fire Resist Barrithane VP
 - c. 4" Foil-GRIP 1402*
 - d. 4" AlumaGRIP 701*
- Termination Mastic for Flashing/Membrane: 1" X 40 mil ribbon or tooled ³/₈" bead of SURE-SEAL Lap Sealant, LM 800 XL, BarriBond, or BarriBond XL
- 3. Detail Flashing, 3" on each side at Openings, Terminations, Penetrations, Transitions, and Angle Changes
 - a. Fire Resist 705 FR-A/XLT*
 - b. SURE-SEAL P/S Elastoform* or SURE-SEAL P/S Cover Strip*
 - c. LiquiFiber or DCH Reinforcing Fabric embedded in Barritech VP/NP/NP LT
 - d. 40 mil application of BarriBond, BarriBond XL, or Barrithane VP
- Prepare the surface as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV-GRIP, HP 250 Primer or Low VOC EPDM Primer per instructions on Product Data Sheet.

Note 5: In the NFPA 285 test, flashings for fenestration, including Through-Wall Flashing (TWF), are not considered part of the WRB (Ref: 2015 IBC Section 1403.5 and 2021 IBC Section 1402.5). Therefore, suitable combustible or noncombustible flashings are permitted in wall assemblies as required in Building Code (Ref: 2015 IBC Section 1405.4 and 2021 IBC Section 1404.4). TWF is allowed for use in wall assemblies clad with masonry or stone at the base of wall, head of wall, relieving angle, window head, windowsill, and at other interruptions in the exterior cavity. TWF shall be applied a maximum of 8" onto the back-up wall and terminate at daylight or onto a drip edge. The following TWF products may be used:

- 1. CCW-705 TWF/XLT*
- 2. Pre-Kleened EPDM TWF loose-laid or adhered with SURE-SEAL 90-8-30A bonding Adhesive, or SURE-SEAL Low VOC Bonding Adhesive
- 3. Metal TWF by others
- Prepare the surface as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV-GRIP, HP 250 Primer or Low VOC EPDM Primer per instructions on Product Data Sheet.

Note 6: BRT-801 tape may be used over Fire-Resist 705 RS at membrane splices, terminations, and penetrations. Fire-Resist 705 RS and the substrate may be treated with CCW-702, CCW-702 LV, CCW-702 WB or Low VOC Travel-Tack to promote adhesion of BRT-801.

Note 7: Fire-Resist 705 RS may be used in the following applications:

- 1. Over the exterior insulation, while another approved WRB is used over the base wall assembly.
- 2. Over a WRB on the base wall assembly while no exterior insulation is used. Use only WRBs listed below:
 - a. CC Fire Resist 705 FR-A
 - b. Other WRBs that produce no ignition when tested per ASTM E1354 at a heat flux of 50 kW/m².

Note 8: Insulating coating over a noncombustible substrate can mitigate thermal bridging at wall assembly terminations and penetrations. Coating in these conditions covers a small percentage of the total wall surface area. The following products are allowed:

- 1. Aerolon 945 tape with primer by Tnemec
- 2. Aerolon 971 coating with primer by Tnemec

Appendix B For Compliance with NFPA 285-12

Table 12. NFPA 285 Approved Wall Assemblies with Xci Foil Class A or Xci 286 Exterior Insulation^{1,3}

Wall Component	Materials
Base Wall System Use either 1, 2, 3, or 4	 Cast concrete walls CMU concrete walls 25-gauge minimum 3⁵/₈" (minimum) steel studs spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Lateral bracing every 4' FRTW studs: minimum nominal 2" x 4" dimension, spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Bracing as required by code
Fire-Stopping at Floor Lines Use item 1 or 2	 Any approved mineral-fiber-based safing insulation in each stud cavity at floor line. Safing thickness must match stud cavity depth. Solid FRTW fire blocking at floor line in accordance with building code requirements for Type III construction.
Cavity Insulation Use any item 1 - 6	 None None 11/2" (minimum) of Carlisle SPI SealTite PRO (up to full cavity thickness), SealTite PRO Closed Cell, or SealTite PRO One Zero (up to full cavity thickness for each)Any noncombustible insulation per ASTM E136 11/2" (minimum) of BASF Walltite SPF (up to full cavity thickness) Any noncombustible insulation per ASTM E136 Any mineral fiber (Board type Class A ASTM E84 faced or unfaced) Any foam plastic insulation (SPF or board type) that has been tested per ASTM E1354 (at a minimum of 20 kW/m² heat flux) and shown by analysis to be less flammable (improved Tign, PK. HRR) than Covestro EcoBay CC or BASF Walltite NCFI InsulBloc SPF (up to full cavity thickness) Icynene MD-C-200v3 (Proseal) up to 5¹/2" (only with ¹/2" [minimum] exterior gypsum sheathing) SWD Urethane Quik-Shield 112 up to 6" (maximum) stud cavities with an air gap not exceeding 2¹/2" 11¹/2" (minimum) Thermoseal 2000 (up to full cavity thickness) Carlisle SealTite PRO High Yield, SealTite PRO Open Cell, SealTite PRO No Mix, SealTite PRO No Trim 21, or SealTite PRO OCX – up to full cavity thickness with ¹/₂" (minimum) exterior gypsum sheathing Gaco (Firestone) F6500R, 052N, F4500, 183M, F1850, F1880 – 3¹/₂" (maximum) for use with ⁵/₈" Exterior Gypsum Sheathing JM Corbond III or Corbond IV – Full stud cavity depth or less for use with ⁵/₈" exterior gypsum sheathing Huntsman ProSeal HFO (8" maximum thickness with no air gap, 6" maximum thickness with air gap) for use with ¹/₂" or thicker exterior gypsum sheathing

Table 12. NFPA 285 Approved Wall Assemblies with Xci Foil Class A or Xci 286 Exterior Insulation^{1,3}

Wall Component	Materials
<i>Exterior Sheathing</i> Use either 1, 2, or 3	 None (only with cavity insulation 1, 2, 3, 4, 5, or 6) 1/2" or thicker exterior gypsum sheathing 1/2" (minimum) FRTW structural panels in Type III construction
Multi-Function Sheathing and WRB Products Use 1 or 2	 USG Securock Exoair 430 System – See note and Table 17 ⁵/₈" Georgia Pacific DensElement, flashed with Prosoco R-Guard FastFlash on sheathing joints Note: Item 1 or 2 replaces the exterior sheathings above. When either of these items are used, do not use exterior sheathings or WRBs on base wall surface in Table 17.
WRB Over Base Wall Surface	1. See Table 17
<i>Exterior Insulation</i> Use either 1 or 2, depending on cladding <i>Note:</i> A construction which utilizes no exterior sheathing may not use spray foam cavity insulation	 3¹/₂" thick (maximum) Xci Foil Class A or Xci 286 for all claddings 4" thick Xci Foil Class A or Xci 286 for claddings 1 - 6
WRB Over Exterior Insulation Only with Claddings 1 - 6	 See Table 17 Note: The exterior insulation may be used with or without CavClear Masonry Mat over the insulation, with a maximum 1" air gap between the CavClear and the cladding. When CavClear is used, this may only be used with Cladding 1 - 6 or with thin brick/thin stone adhered to stucco as long as the total thickness is ³/₄" minimum.

Table 12. NFPA 285 Approved Wall Assemblies with Xci Foil Class A or Xci 286 Exterior Insulation^{1,3}

Wall Component		Materials
Exterior Cladding Use any item 1 – 16	1.	Brick – Nominal 4" thick, clay or concrete brick or veneer with maximum 2" air gap behind the brick. Brick ties/Anchors 24" o.c. (maximum)
Cladding 7 - 16 for 3 ¹ / ₂ " (maximum) insulation thickness with special opening perimeter. Maximum Air Gap 2" for Cladding	2.	Stucco – Minimum ³ / ₄ " thick, exterior cement plaster and lath. For systems that require a more durable WRB system, any building wrap or 15# felt that meets requirement #12 in WRB Over Exterior Insulation (Table 17) can be used as a slip sheet between the WRB/exterior insulation and the lath.
1 – 6.	3.	Limestone – Minimum 2" thick using any standard non-open joint installation technique such as shiplap
Cladding 7 - 16 for 3 ¹ / ₂ " (maximum) insulation thickness with special opening perimeter	4.	Natural stone veneer – Minimum 2" thick using any standard non-open joint installation technique such as grouted/mortared stone
Maximum Air Gap 2" for Claddings 1 - 6.	5.	Cast Artificial Stone – Minimum 11/2" thick complying with ICC-ES AC 51 using any standard non-open joint installation technique such as shiplap
Maximum Air Gap 11/2" for Claddings 7 - 16. If Claddings 2, 3, 4, 5, 11, 12, or	6.	Terra Cotta Cladding – Minimum 1 ¹ / ₄ " thick (solid or equivalent by weight) using any standard open or non-open joint installation technique such as shiplap
14 are on stucco base with lath, a	7.	Any ACM or MCM that has passed NFPA 285 with foam of comparable thickness
secondary WRB (WRB items above allowed over foam) can be	8.	Uninsulated sheet metal building panels including steel, copper, aluminum, or zinc
installed between the insulation	9.	1/4" (minimum) uninsulated fiber-cement siding, or porcelain, or ceramic tile mechanically attached
and lath and must not be full coverage asphalt or self-adhering membranes, but may be slip sheet	10.	Stone, porcelain, ceramic/aluminum honeycomb composite building panels that have successfully passed NFPA 285 criteria
(stapled) with no adhesive.	11.	Autoclaved-Aerated-Concrete (AAC) panels that have successfully passed NFPA 285 criteria
Armatherm Z Girts may be used	12.	Terra Cotta Cladding – Any Rain-screen Terra Cotta (minimum 1/2" thick) with ventilated shiplap
horizontally in Hunter assemblies	13.	¹ / ₂ " Stucco – Any one-coat stucco (¹ / ₂ " minimum) that meets AC11 acceptance criteria or is approved for use in Type I-IV construction or has been tested per NFPA 285 or stays in place when tested per ASTM E119 (stucco exposed to fire) for at least 30 minutes
	14.	Thin brick/cultured stone set in thin set adhesive and metal lath that has been tested to ASTM E119 (brick exposed to furnace) and remains in place for a minimum of 30 minutes, or has passed a NFPA 285 test. Minimum ³ / ₄ ". For these systems that require a more durable WRB system, any building wrap or 15# felt that meets requirement #12 in WRB Over Exterior Insulation (Table 17) can be used as a slip sheet between the WRB/AVP and the lath
	15.	Glen Gery Thin Tech Elite Series Masonry Veneer or TABS II Panel System with 1/2" thick bricks using TABS Wall Adhesive
	16.	Natural Stone Veneer – minimum 11/4" thick using any standard installation technique
	17	FunderMax m.look – minimum 1/4" thick using any standard installation technique

The assemblies' combinations created herein and the various substitutions of products are based on testing and professional thermal engineering analysis. 1.

2. Acceptance criteria for ASTM E1354 testing have not been well established in the referenced building codes and foam sheathing related sections. The criteria stated here for substitution of products is based on testing and professional thermal engineering analysis.

3. Tign is the time to ignition from the start of the test until the sheathing ignites. Pk. HRR is the peak heat release rate during the test.

Table 13. NFPA 285 Approved Wall Assemblies with Xci CG Class A Exterior Insulation^{1,3}

Wall Component	Materials
Base Wall System Use either 1, 2, 3 or 4	 Cast concrete walls CMU concrete walls 25-gauge minimum 3⁵/₈" (minimum) steel studs spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Lateral bracing every 4' FRTW studs: minimum nominal 2" x 4" dimension, spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Bracing as required by building code
<i>Fire-Stopping at Floor</i> <i>Lines</i> Use Item 1 or 2	 Any approved mineral-fiber-based safing insulation in each stud cavity at floor line. Safing thickness must match stud cavity depth. Solid FRTW fire blocking at floor line in accordance with building code requirements for Type III construction.
Cavity Insulation Use any items 1 – 15 Items 8 - 15 may only be used with exterior sheathing 2 or the specified thickness	 None 11/2" (minimum) of Carlisle SPI SealTite PRO (up to full cavity thickness), SealTite PRO Closed Cell, or SealTite PRO One Zero (up to full cavity thickness for each) 11/2" (minimum) of BASF Walltite SPF (up to full cavity thickness) Any noncombustible insulation per ASTM E136 Any mineral fiber (Board type Class A ASTM E84 faced or unfaced) Any foam plastic insulation (SPF or board type) that has been tested per ASTM E1354 (at a minimum of 20 kW/m² heat flux) and shown by analysis to be less flammable (improved T_{ign}, PK. HRR) than Covestro EcoBay CC or BASF Walltite NCFI InsulBloc SPF (up to full cavity thickness) Icynene MD-C-200v3 (Proseal) up to 51/2" (only with 1/2" [minimum] exterior gypsum sheathing) SWD Urethane Quik-Shield 112 up to 6" in 6" (maximum) stud cavities with an air gap not exceeding 21/2" 11/2" (minimum) Thermoseal 2000 (up to full cavity thickness) Carlisle SealTite PRO High Yield, SealTite PRO Open Cell, SealTite PRO No Mix, SealTite PRO No Trim 21, or SealTite PRO OCX – up to full cavity thickness with 1/2" (minimum) exterior gypsum sheathing Gaco (Firestone) F6500R, 052N, F4500, 183M, F1850, F1880 – 31/2" (maximum) for use with 5/8" Exterior Gypsum Sheathing JM Corbond III or Corbond IV – Full stud cavity depth or less for use with 5/8" exterior gypsum sheathing Huntsman ProSeal HFO (8" maximum thickness with no air gap, 6" maximum thickness with air gap) for use with 1/2" or thicker exterior gypsum sheathing
Exterior Sheathing Use either 1, 2, or 3	 None (only with claddings 1 - 6, and cavity insulation 1, 2, 3, 4, 5, 6, or 11). 1/2" or thicker exterior gypsum sheathing 1/2" (minimum) FRTW structural panels in Type III construction

Table 13. NFPA 285 Approved Wall	Assemblies with Xci CG Class	A Exterior Insulation ^{1,3}
	Assemblies with Act CO Class	

Wall Component	Materials
Multi-Function Sheathing and WRB Products Use 1 or 2	 USG Securock Exoair 430 System – See note and Table 17 5/8" Georgia Pacific DensElement, flashed with Prosoco R-Guard FastFlash on sheathing joints. Note: Item 1 or 2 replaces the exterior sheathings above. When either of these items are used, do not use exterior sheathings or WRB's on base wall surface in Table 17
WRB Over Base Wall Surface	1. See Table 17
<i>Exterior Insulation</i> Use either 1 or 2 depending on cladding	 3¹/₂" thick (maximum) Xci CG or Xci CG Class A for all claddings. 4" thick (maximum) Xci CG or Xci CG Class A for claddings 1 - 6.
WRB Over Exterior Insulation	 See Table 17 Note: The exterior insulation may be used with or without CavClear Masonry Mat over the insulation with a maximum 1" air gap between the CavClear and the cladding. When CavClear is used, this may only be used with Cladding 1, 2, 3, 4, 5, or 6 or with thin brick/thin stone adhered to stucco as long as the total thickness is ³/₄" minimum.

Table 13. NFPA 285 Approved Wall Assemblies with Xci CG Class A Exterior Insulation^{1,3}

Wall Component		Materials
Exterior Cladding Use any Item 1 - 17	1.	Brick – Nominal 4" thick, clay or concrete brick or veneer with maximum 2" air gap behind the brick. Brick ties/Anchors 24" o.c. (maximum)
ltem 7 may use any tested/approved installation technique.	2.	Stucco – Minimum ³ / ₄ " thick, exterior cement plaster and lath. For systems that require a more durable WRB system, any building wrap or 15# felt that meets requirement #12 in WRB Over Exterior Insulation (Table 17) can be used as a slip sheet between the WRB/exterior insulation and the lath.
Items 8, 9, or 12 may use any standard installation technique.	3.	Limestone – Minimum 2" thick using any standard non-open joint installation technique such as shiplap.
If Claddings 2, 3, 4, 5, 13, 14, 15, or 16 are on stucco base with lath, a secondary WRB (WRB items above allowed over foam) can be installed between the insulation and lath and must not be full coverage asphalt or self-adhering membranes, but may be slip sheet (stapled) with no adhesive.	4.	Natural stone veneer – Minimum 2" thick using any standard non-open joint installation technique such as grouted/mortared stone.
	5.	Cast Artificial Stone – Minimum 1 ¹ / ₂ " thick complying with ICC-ES AC 51 using any standard non-open joint installation technique such as shiplap.
	6.	Terra Cotta Cladding – Minimum 1 ¹ /4" thick (solid or equivalent by weight) using any standard open or non-open joint installation technique such as shiplap.
	7.	Any MCM that has passed NFPA 285.
	8.	Uninsulated sheet metal building panels including steel, copper, aluminum (or zinc only with Xci CG Class A)
	9.	1/4" (minimum) uninsulated fiber-cement siding, or porcelain or ceramic tile mechanically attached.
	10.	Stone, porcelain, ceramic/aluminum honeycomb composite building panels that have successfully passed NFPA 285 criteria.
	11.	AAC panels that have successfully passed NFPA 285 criteria.
	12.	Terra Cotta Cladding – Any Rain-screen Terra Cotta (minimum 1/2" thick) with ventilated shiplap.
	13.	¹ / ₂ " Stucco – Any one coat stucco (¹ / ₂ " minimum) that meets AC11 acceptance criteria or is approved for use in Type I-IV construction or has been tested per NFPA 285 or stays in place when tested per ASTM E119 (stucco exposed to fire) for at least 30 minutes.
	14.	Thin brick/cultured stone set in thin set adhesive and metal lath that has been tested to ASTM E119 (brick exposed to furnace) and remains in place for a minimum of 30 minutes, or has passed a NFPA 285 test. Minimum ³ / ₄ ". For these systems that require a more durable WRB system, any building wrap or 15# felt that meets requirement #12 in WRB Over Exterior Insulation (Table 17) can be used as a slip sheet between the WRB/AVP and the lath.
	15.	Glen Gery Thin Tech Elite Series Masonry Veneer or TABS II Panel System with 1/2" thick bricks using TABS Wall Adhesive.
	16.	Natural Stone Veneer – minimum 11/4" thick using any standard installation technique.
	17.	FunderMax m.look – minimum 1/4" thick using any standard installation technique

1. The assemblies' combinations created herein and the various substitutions of products are based on testing and professional thermal engineering analysis.

2. Acceptance criteria for ASTM E1354 testing have not been well established in the referenced building codes and foam sheathing related sections. The criteria stated here for substitution of products is based on testing and professional thermal engineering analysis.

3. T_{ign} is the time to ignition from the start of the test until the sheathing ignites. Pk. HRR is the peak heat release rate during the test.

Table 14. NFPA 285 Approved Wall Assemblies with Xci Ply Class A Exterior Insulation^{1,3}

Wall Component	Materials
Base Wall System Use either 1, 2, 3, or 4	 Cast concrete walls CMU concrete walls 25-gauge minimum 3⁵/₈" (minimum) steel studs spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Lateral bracing every 4' FRTW studs: minimum nominal 2" x 4" dimension, spaced 24" o.c. (maximum) a. ⁵/₈" Type X gypsum wallboard interior b. Bracing as required by code
Fire-Stopping at Floor Lines	 Any approved mineral-fiber-based safing insulation in each stud cavity at floor line. Safing thickness must match stud cavity depth. Solid FRTW fire blocking at floor line in accordance with building code requirements for Type III construction.
Cavity Insulation Use any Item 1-15 Items 3, 8, 9, 10, 11, 12, 13, 14, or 15 may only be used with exterior sheathing 2 or the specified thickness	 None 11/2" (minimum) of Carlisle SPI SealTite PRO (up to full cavity thickness), SealTite PRO Closed Cell, or SealTite PRO One Zero (up to full cavity thickness for each) 11/2" (minimum) of BASF Walltite SPF (up to full cavity thickness) Any noncombustible insulation per ASTM E136 Any mineral fiber (Board type Class A ASTM E84 faced or unfaced) Any foam plastic insulation (SPF or board type) that has been tested per ASTM E1354 (at a minimum of 20 kW/m² heat flux) and shown by analysis to be less flammable (improved T_{ign}, PK. HRR) than Covestro EcoBay CC or BASF Walltite NCFI InsulBloc SPF (up to full cavity thickness) Icynene MD-C-200v3 (Proseal) up to 51/2" (only with 1/2" [minimum] exterior gypsum sheathing) SWD Urethane Quik-Shield 112 up to 6" in 6" (maximum) stud cavities with an air gap not exceeding 21/2" 11 11/2" (minimum) Thermoseal 2000 (up to full cavity thickness) Carlisle SealTite PRO High Yield, SealTite PRO Open Cell, SealTite PRO No Mix, SealTite PRO No Trim 21, or SealTite PRO OCX – up to full cavity thickness with 1/2" (minimum) exterior gypsum sheathing Gaco (Firestone) F6500R, 052N, F4500, 183M, F1850, F1880 – 31/2" (maximum) for use with 5/8" Exterior Gypsum Sheathing JM Corbond III or Corbond IV – Full stud cavity depth or less for use with 5/8" exterior gypsum sheathing Huntsman ProSeal HFO (8" maximum thickness with no air gap, 6" maximum thickness with air gap) for use with 1/2" or thicker exterior gypsum sheathing
Exterior Sheathing Use either 1, 2, or 3	 None (only with cavity insulation 1, 2, 4, 5, or 6). Also see note for Cavity Insulation 1/2" or thicker exterior gypsum sheathing 1/2" (minimum) FRTW structural panels in Type III construction

Table 14. NFPA 285 Approved Wall Assemblies with Xci Ply Class A Exterior Insulation^{1,3}

Wall Component	Materials
Multi-Function Sheathing and WRB Products Use 1 or 2	 USG Securock Exoair 430 System – See note and Table 17 5/8" Georgia Pacific DensElement, flashed with Prosoco R-Guard FastFlash on sheathing joints. Note: Item 1 or 2 replaces the exterior sheathings above. When either of these items are used, do not use exterior sheathings or WRBs on base wall surface Table 17.
WRB Over Base Wall Surface	1. See Table 17
<i>Exterior Insulation</i> Use either 1 or 2 depending on cladding	 4¹/₄" thick (maximum) Xci Ply Class A (3¹/₂" foam maximum, ³/₄" FR Plywood maximum) with all claddings. 4³/₄" thick (maximum) Xci Ply Class A (4" foam maximum, ³/₄" FR Plywood maximum may be used with claddings 1 - 6.
WRB Over Exterior Insulation	 See Table 17 Note: The exterior insulation may be used with or without CavClear Masonry Mat over the insulation with a maximum 1" air gap between the CavClear and the cladding. When CavClear is used, this may only be used with Cladding 1 - 6 or with thin brick/thin stone adhered to stucco as long as the total thickness is ³/₄" minimum.
Exterior Cladding Use any Item 1-17	 Brick – Nominal 4" thick, clay or concrete brick or veneer with maximum 2" air gap behind the brick. Brick ties/Anchors 24" o.c. (maximum)
Item 9 may use any tested/approved installation technique.	 Stucco – Minimum ³/₄" thick, exterior cement plaster and lath. For systems that require a more durable WRB system, any building wrap or 15# felt that meets requirement #12 in WRB Over Exterior Insulation (Table 17) can be used as a slip sheet between the WRB/exterior insulation and the lath.
Items 10, 11 and 14 may use any standard installation	 Limestone – Minimum 2" thick using any standard non-open joint installation technique such as shiplap.
technique. If Claddings 2, 3, 4, 5, 13, 14,	 Natural stone veneer – Minimum 2" thick using any standard non-open joint installation technique such as grouted/mortared stone.
15 or 16 are on stucco base with lath, a secondary WRB (WRB items above allowed over foam) can be installed between the insulation and lath and must not be full coverage asphalt or self-adhering membranes, but may be slip sheet (stapled) with no adhesive.	 Cast Artificial Stone – Minimum 11/2" thick complying with ICC-ES AC 51 using any standard non-open joint installation technique such as shiplap.
	 Terra Cotta Cladding – Minimum 11/4" thick (solid or equivalent by weight) using any standard open or non-open joint installation technique such as shiplap.
	7. Thin brick/cultured stone set in thin set adhesive and metal lath that has been tested to ASTM E119 (brick exposed to furnace) and remains in place for a minimum of 30 minutes, or has passed a NFPA 285 test. Minimum ³ / ₄ ". For these systems that require a more durable WRB system, any building wrap or 15# felt that meets requirement #12 in WRB Over Exterior Insulation (Table 17) can be used as a slip sheet between the WRB/AVP and the lath.
	 Glen Gery Thin Tech Elite Series Masonry Veneer or TABS II Panel System with 1/2" thick bricks using TABS Wall Adhesive.
	9. Any MCM that has passed NFPA 285.
	 Uninsulated sheet metal building panels including steel, copper, aluminum (or zinc only with Xci Ply Class A)
	11. 1/4" (minimum) uninsulated fiber-cement siding, or porcelain or ceramic tile mechanically attached.
	 Stone, porcelain, ceramic/aluminum honeycomb composite building panels that have successfully passed NFPA 285 criteria.
	13. AAC panels that have successfully passed NFPA 285 criteria.
	14. Terra Cotta Cladding – Any Rain-screen Terra Cotta (minimum 1/2" thick) with ventilated shiplap.

Table 14. NFPA 285 Approved Wall Assemblies with Xci Ply Class A Exterior Insulation^{1,3}

Wall Component	Materials
	15. ¹ / ₂ " Stucco – Any one-coat stucco (¹ / ₂ " minimum) that meets AC11 acceptance criteria or is approved for use in Type I-IV construction or has been tested per NFPA 285 or stays in place when tested per ASTM E119 (stucco exposed to fire) for at least 30 minutes
	16. Natural Stone Veneer – minimum 1 ¹ / ₄ " thick using any standard installation technique
	17. FunderMax m.look – minimum ¹ /4" thick using any standard installation technique

SI: 1 in = 25.4 mm

1. The assemblies' combinations created herein and the various substitutions of products are based on testing and professional thermal engineering analysis.

2. Acceptance criteria for ASTM E1354 testing have not been well established in the referenced building codes and foam sheathing related sections. The criteria stated here for substitution of products is based on testing and professional thermal engineering analysis.

3. Tign is the time to ignition from the start of the test until the sheathing ignites. Pk. HRR is the peak heat release rate during the test.

Table 16. NFPA 285 Approved Mass Wall Assemblies with Xci as Interior Insulation^{1,4}

Wall Component	Materials
Base Wall System Use either 1 or 2	 Cast concrete walls (minimum 2" thick) CMU concrete walls (minimum 4" thick)
<i>Exterior Coating</i> Use either 1, 2, 3, or 4	 Portland cement or lime stucco Any ASTM E84 Class A Paint or Elastomeric Coating Any ASTM E84 Class A Clear Sealer None
Air/Vapor Barrier Membrane Position 1 ² Over Base Wall Interior Note: Some WRBs are only allowed with specific systems.	1. See Table 17 - WRB over Base Wall Surface.
Continuous Insulation Use 1, 2, or 3	 Xci Foil Class A (or Xci-286), 3¹/₂" thick (maximum)⁵ Xci CG Class A or Xci CG, 3¹/₂" thick (maximum) Xci Foil, 3¹/₂" thick (maximum)
Air/Vapor Barrier Membrane Position 2 ³ Over Insulation Note: Some WRBs are only allowed with specific systems	 See Table 17 - WRB over Base Wall Surface. Note: Insulation Joints may be taped with Foil-Grip 1402, 4" width (maximum)
Interior Cladding	 ⁵/₈" type X interior gypsum sheathing installed directly over the insulation or installed to 3⁵/₈" (maximum depth) studs, or Metal Hat or Z Furring directly (no gap between stud/hat/Z and insulation). If an air gap between the stud/hat/Z and insulation is created, fire blocking with mineral wool per <u>IBC</u> <u>Section 718</u> shall be installed. Mass wall designs are assumed to use platform construction (concrete floor line intersects exterior concrete creating a firestop at floor lines). If the floor line is separated from the exterior concrete, fireblocking with mineral wool must be installed to prevent uncontrolled vertical flame spread.
2. Position 1 – Air vapor barri	ons created herein and the various substitutions of products are based on testing and professional thermal engineering analysis. For installed directly on interior side of the base wall system.

3. Position 2 – Air vapor barrier installed over continuous insulation on interior side of the wall assembly.

4. CCW Membrane used in Position 1 or 2, not both.

5. Xci Foil Class A (or Xci-286) insulation can be tacked in place with CAV-Grip or Travel-Tack during installation. Follow instructions on product data sheet.

	iii. LiquiFiber o	r DCH Reinforcing Fabric embedded in Barritech VP/NP/NP LT
	iv. 40 mil applie	ation of BarriBond, BarriBond XL, or Barrithane VP
	These CCW detailing mat	erials may be used over the polyiso insulation and can be use alone or with any approved WRB for the assembly.
	a. Board Joint Treatme	ents:
	i. 2" x 40 mil r	bbon of BarriBond or BarriBond XL
	ii. 4" DCH Rei	nforcing Rabric embedded in Fire-Resist Barritech VP/NP/NP LT or embedded in Fire Resist Barrithane VP
		P 1402 (with surface preparation as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel- Grip, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet)
		RP 701 (with surface preparation as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel Grip, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet)
	b. Termination Mastic	for Flashing/Membrane: 1" x 40 mil ribbon or tooled 3/8" bead of SURE-SEAL Lap Sealant, LM 800 XL, BarriBond, or BarriBond XL
	c. Detail Flashing, 3" o	n each side, at Openings, Terminations, Penetrations, Transitions, and Angle Changes.
	Travel-Tack	705 FR-A/XLT (with surface preparation as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC , CAV-Grip, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet)
	LV, CCW-70	. P/S Elastoform or SURE-SEAL P/S Cover Strip (both with surface preparation as recommended by CCW using CCW-702, CCW-702 22 WB, CCW-715, Low VOC Travel-Tack, CAV-Grip, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet
	iii. LiquiFiber o	r DCH Reinforcing Fabric embedded in Barritech VP/NP/NP LT
		ation of BarriBond, BarriBond XL, or Barrithane VP
	permitted for use in wall a	hing for fenestration, including through-wall flashing (TWF), are not considered part of the WRB (ref: 2015 IBC Section 1405.4). TWF is ssemblies clad with masonry or stone at the base of wall, head of wall, relieving angle, window head, windowsill, and at other or cavity. TWF shall be applied a maximum of 8" onto the back-up wall and terminate at daylight or onto a drip edge. The following TWF
	a. CCW TWF/XLT (wit	h surface preparation as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV r, or Low VOC EPDM Primer per instructions on Product Data Sheet)
	b. Pre-Kleened EPDM	TWF loose-laid or adhered with SURE-SEAL 90-8-30A bonding Adhesive or SURE-SEAL Low VOC Bonding Adhesive
	c. Metal TWF by other	S
		ed over Fire-Resist 705 RS at membrane splices, terminations, and penetrations. Fire-Resist 705 RS and the substrate may be trated w CCW-702 WB, or Low VOC Travel-Tack to promote adhesion of BRT-801.
	Fire-Resist 705 RS may b	e used in the following applications:
		sulation, while another approved WRB is used over the base wall assembly.
		base wall assembly while no exterior insulation is used. Use only WRBs listed below: ist 705 FR-A
	ii. Other WRB	s that produce no ignition when tested per ASTM E1354 at a heat flux of 50 kW/m ² .
		over noncombustible substrate can be used for mitigating thermal bridging at wall assembly terminations and penetrations. Coating s cover a small percentage of the total wall surface area. The following products are allowed:
	a. Aerolon 945 tape w	th primer by Tnemec
	b. Aerolon 971 coating	

Report Number: 1402-01 Xci CG Class A, Xci Ply Class A, Xci Foil Class A, Xci Foil Class A Plus, and Xci 286 Air Barrier Water-Resistive Barrier and Fire Performance in Exterior and Interior Walls of Buildings of Type I-V Construction Information contained in this report was developed using report holder's confidential intellectual property (IP) and trade secrets (TS), which is protected by <u>Defend Trade Secrets Act 2016</u>, © DrJ Engineering, LLC

Table 18. Table Notes

Note 1: The following adhesives may be used to attach the polyisocyanurate (polyiso) insulation.

- 1. Adhesive applied discontinuously at a rate of 3/8" x 3" dabs, 16" OC: LM 800 XL or BarriBond or BarriBond XL
- 2. Aerosol adhesive at the application rate as per mfg. instructions: CAV-GRIP or Low VOC Travel-Tack

Note 2: The following may be used as a gap-filler between insulation panels: FOMO HandiFoam Fireblock or TVM Fireblock

Note 3: These CCW detailing materials may be used over the base wall assembly and alone or with any approved WRB for the construction.

- 1. Board Joint Treatments:
 - a. 2" x 40 mil ribbon of BarriBond or BarriBond XL
 - b. 4" DCH Reinforcing Fabric embedded in Fire-Resist Barritech VP/NP/NP LT or embedded in Fire Resist Barrithane VP
 - c. 4" Foil-GRIP 1402*
 - d. 4" AlumaGRIP 701*
- Termination Mastic for Flashing/Membrane: 1" X 40 mil ribbon or tooled ³/₈" bead of SURE-SEAL Lap Sealant, CCW-704, LM 800 XL, BarriBond, or BarriBond XL
- 3. Detail Flashing, 3" on each side, at Openings, Terminations, Penetrations, Transitions, and Angle Changes.
 - a. CCW-705/XLT*, CCW-705 TWF/XLT* or Fire Resist 705 FR-A/XLT*
 - b. SURE-SEAL P/S Elastoform* or SURE-SEAL P/S Cover Strip*
 - c. LiquiFiber or DCH Reinforcing Fabric embedded in Barritech VP/NP/NP LT
 - d. 40 mil application of BarriBond, BarriBond XL, or Barrithane VP
- Prepare the surface as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV-GRIP, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet.

Note 4: These CCW detailing materials may be used over the polyiso insulation and alone or with any approved WRB for the assembly. 1. Board Joint Treatments:

- a. 2" x 40 mil ribbon of BarriBond or BarriBond XL
- b. 4" DCH Reinforcing Fabric embedded in Fire-Resist Barritech VP/NP/NP LT or embedded in Fire Resist Barrithane VP
- c. 4" Foil-GRIP 1402*
- d. 4" AlumaGRIP 701*
- Termination Mastic for Flashing/Membrane: 1" X 40 mil ribbon or tooled ³/₈" bead of SURE-SEAL Lap Sealant, LM 800 XL, BarriBond, or BarriBond XL
- 3. Detail Flashing, 3" on each side at Openings, Terminations, Penetrations, Transitions and Angle Changes
 - a. Fire Resist 705 FR-A/XLT*
 - b. SURE-SEAL P/S Elastoform* or SURE-SEAL P/S Cover Strip*
 - c. LiquiFiber or DCH Reinforcing Fabric embedded in Barritech VP/NP/NP LT
 - d. 40 mil application of BarriBond, BarriBond XL, or Barrithane VP
- Prepare the surface as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV-GRIP, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet.

Note 5: In the NFPA 285 test, flashings for fenestration, including Through-Wall Flashing *"TWF"*, are not considered part of the WRB (Ref: <u>2015 IBC Section 1403.5</u>). Therefore, suitable combustible or noncombustible flashings are permitted in wall assemblies as required in Building Code (Ref: <u>2015 IBC Section 1405.4</u>). TWF is allowed for use in wall assemblies clad with masonry or stone at the base of wall, head of wall, relieving angle, window head, windowsill, and at other interruptions in the exterior cavity. TWF shall be applied a maximum of 8" onto the back-up wall and terminate at daylight or onto a drip edge. The following TWF products may be used:

- 1. CCW-705 TWF/XLT*
- 2. Pre-Kleened EPDM TWF loose-laid or adhered with SURE-SEAL 90-8-30A bonding Adhesive or SURE-SEAL Low VOC Bonding Adhesive
- 3. Metal TWF by others
- Prepare the surface as recommended by CCW using CCW-702, CCW-702 LV, CCW-702 WB, CCW-715, Low VOC Travel-Tack, CAV-GRIP, HP 250 Primer, or Low VOC EPDM Primer per instructions on Product Data Sheet.

Note 6: BRT-801 tape may be used over Fire-Resist 705 RS at membrane splices, terminations, and penetrations. Fire-Resist 705 RS and the substrate may be treated with CCW-702, CCW-702 LV, CCW-702 WB, or Low VOC Travel-Tack to promote adhesion of BRT-801.

Note 7: Fire-Resist 705 RS may be used in the following applications:

- 1. Over the exterior insulation, while another approved WRB is used over the base wall assembly.
- 2. Over a WRB on the base wall assembly while no exterior insulation is used. Use only WRBs listed below:
 - a. CC Fire Resist 705 FR-A
 - b. Other WRBs that produce no ignition when tested per ASTM E1354 at a heat flux of 50 kW/m².

Note 8: Insulating coating over a noncombustible substrate can mitigate thermal bridging at wall assembly terminations and penetrations. Coating in these conditions covers a small percentage of the total wall surface area. The following products are allowed:

- 1. Aerolon 945 tape with primer by Tnemec
- 2. Aerolon 971 coating with primer by Tnemec
