TER 1801-02
Use of FastenMaster® FrameFAST™ Structural Wood Screw Fasteners in Stud to Plate and Plate to Rim Board Applications

OMG, Inc. DBA FastenMaster®

Product:
FastenMaster® FrameFAST™ Structural Wood Screw (FrameFAST™ Fasteners)

Issue Date:
March 12, 2018
Revision Date:
March 3, 2020
Subject to Renewal:
July 1, 2020
COMPANY INFORMATION:
OMG, Inc. DBA FastenMaster®
153 Bowles Rd
Agawam, MA 01001-2908
800-518-3569
mguthrie@olyfast.com

DIVISION: 06 00 00 - WOOD, PLASTICS AND COMPOSITES
SECTION: 06 05 23 - Wood, Plastic, and Composite Fastenings

1 PRODUCT EVALUATED

1.1 FastenMaster® FrameFAST™ Structural Wood Screw
(FrameFAST™ Fasteners)

2 APPLICABLE CODES AND STANDARDS

2.1 Codes
2.1.1 IBC—12, 15, 18: International Building Code®
2.1.2 IRC—12, 15, 18: International Residential Code®
2.1.3 FBC—14, 17: Florida Building Code – Product Approval Number FL21662

2.2 Standards and Referenced Documents
2.2.1 ANSI/AWC NDS: National Design Specification (NDS) for Wood Construction
2.2.2 ASTM A153: Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware
2.2.3 ASTM D1761: Standard Test Methods for Mechanical Fasteners in Wood
2.2.4 ASTM D2395: Standard Test Methods for Density and Specific Gravity (Relative Density) of Wood and Wood-Based Materials
2.2.5 ASTM D4442: Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials
2.2.6 ASTM F1575: Standard Test Method for Determining Bending Yield Moment of Nails

---

1 Building codes require data from valid research reports be obtained from approved sources. Agencies who are accredited through ISO/IEC 17065 have met the code requirements for approval by the building official. DrJ is an ISO/IEC 17065 ANSI-Accredited Product Certification Body – Accreditation #1131.

Through ANSI accreditation and the IAF MLA, DrJ certification can be used to obtain product approval in any jurisdiction or country that has IAF MLA Members & Signatories to meet the Purpose of the MLA – “certified once, accepted everywhere.”

Building official approval of a licensed registered design professional (RDP) is performed by verifying the RDP and/or their business entity complies with all professional engineering laws of the relevant jurisdiction. Therefore, the work of licensed RDPs is accepted by building officials, except when plan (i.e. peer) review finds an error with respect to a specific section of the code. Where this TER is not approved, the building official responds in writing stating the reasons for disapproval.

For more information on any of these topics or our mission, product evaluation policies, product approval process, and engineering law, visit drjcertification.org or call us at 608-310-6748.

2 Unless otherwise noted, all references in this TER are from the 2018 version of the codes and the standards referenced therein (e.g., ASCE 7, NDS, ASTM). This material, design, or method of construction also complies with the 2000-2015 versions of the referenced codes and the standards referenced therein.

3 All terms defined in the applicable building codes are italicized.
2.2.7  ASTM F606: Standard Test Methods for Determining the Mechanical Properties of Externally and Internally Threaded Fasteners, Washers, Direct Tension Indicators, and Rivets

2.2.8  AWC TR 12: General Dowel Equations for Calculating Lateral Connection Values

3 PERFORMANCE EVALUATION

3.1 FrameFAST™ fasteners were evaluated as installed in the end use application to derive allowable design values as an alternate means of attaching wood studs to wall top and bottom plates and attaching wall top and bottom plates to the rim board with and without blocking. The following conditions were evaluated:

3.1.1 Uplift and lateral resistance in stud to plate connections in accordance with ASTM D1761.

3.1.2 Uplift and lateral resistance in plate to rim board connections in accordance with ASTM D1761.

3.2 Any code compliance issues or fastener connections not specifically addressed in this section are outside the scope of this TER.

3.3 Any engineering evaluation was performed on the dates provided in this TER and within DrJ's professional scope of work.

4 PRODUCT DESCRIPTION AND MATERIALS

4.1 The product evaluated in this TER is shown in Figure 1.

![FrameFAST™ Fastener Specification](image)

**FIGURE 1. FRAMEFAST™ FASTENER SPECIFICATION**

4.2 FrameFAST™ fasteners are manufactured with modified 10B21 carbon steel wire conforming to the manufacturers specifications and are coated with a proprietary finish.

4.3 FrameFAST™ fasteners are manufactured using a standard cold-formed process followed by a heat-treating process.

4.4 Fasteners are approved for use in fire-retardant-treated lumber, provided the conditions set forth by the fire-retardant-treated lumber manufacturer are met, including appropriate strength reductions.

4.5 FrameFAST™ fasteners are approved for use in interior and exterior conditions and in pressure-treated wood.

4.6 In-plant quality control procedures, under which the FrameFAST™ fasteners are manufactured, are audited through an inspection process performed by an approved agency.

4.7 The FrameFAST™ fasteners evaluated in this TER are designated as shown in Table 1.

1. Fastener length is measured from the top of the head to the tip. Thread length includes tapered tip (Figure 1).
2. Bending yield, tension, and shear values determined at minor root diameter.

5 APPLICATIONS

5.1 FrameFAST™ fasteners are used to attach minimum 1½"-wide wood studs to wall top and bottom plates and to attach wall top and bottom plates to rim board in the construction of walls that meet the requirements of IBC Section 2308 and IRC Section R602. The fasteners provide resistance to uplift and/or lateral loads applied parallel and/or perpendicular to the wall or structural framing member.

5.1.1 Walls shall consist of a single or double top plate designed in accordance with IBC Section 2308.5.3.24 and IRC Section R602.3.2.

5.1.2 See Table 2 and Table 3 for the design requirements and the FrameFAST™ fasteners' allowable design values.

5.1.3 See Section 6 for installation requirements.

5.1.4 FrameFAST™ fasteners are used in buildings requiring design in accordance with IBC Section 1609 or wind analysis in accordance with IRC Section R301.2.1.

5.1.5 FrameFAST™ fasteners are used in buildings requiring design in accordance with IRC Section 1613 or seismic analysis in accordance with IRC Section R301.2.2.

5.1.6 Where the application exceeds the limitations set forth herein, design shall be permitted in accordance with accepted engineering procedures, experience, and technical judgment.

5.2 Design Concepts and Allowable Design Loads

5.2.1 Allowable design loads are provided in Table 2 and Table 3 for FrameFAST™ fasteners. Allowable design loads are applicable to fasteners installed in accordance with the procedures described in Section 6. For stud to plate connections, allowable design loads are applicable for both single and double top plate applications as shown in Figure 3. For plate to rim board connections, allowable design loads are applicable for both single bottom plate with OSB subfloor to rim board applications and to single or double top plate to blocking/rim board applications as shown in Figure 3.

1. For applications involving members with different specific gravities, use the allowable load corresponding to the lowest specific gravity.
2. Dimensional lumber members shall be minimum of 2” nominal thickness.
3. Design values are based on a load duration factor, \(C_D\), of 1.6. No further duration of load increases permitted. Reduced design values for other load durations as applicable.
4. Use a reduction factor of 0.80 when connecting each ply of multi-ply stud columns to the top plate.
5. See Figure 2 for clarification of load orientations and Figure 3 for installation details.

SI: 1 lb = 4.45 N

1. For applications involving members with different specific gravities, G, use the allowable load corresponding to the lowest specific gravity. For EWP rim boards (i.e., OSB, LSL, LVL), the top/bottom plates shall be minimum SPF dimensional lumber. Dimensional lumber members shall be minimum of 2" nominal thickness.
2. Design values are based on a load duration factor, CD, of 1.6. No further duration of load increases permitted. Reduced design values for other load durations as applicable.
3. Equivalent specific gravity values are for withdrawal of nails or screws installed in edge.
4. Equivalent specific gravity values are dowel bearing of nails or screws installed in edge.
5. Equivalent specific gravity values are for withdrawal of nails installed in face.
6. Equivalent specific gravity values are dowel bearing of nails or screws installed in face.
7. See Figure 4 for blocking requirements.

5.2.2 Where it is anticipated that loads will be applied to a single fastener simultaneously in more than one direction, additional evaluation is required to account for the combined effect of these loads using accepted engineering practice.

5.2.2.1 Consult a professional engineer, as needed, for complex design conditions.

### 6 Installation

6.1 Installation shall comply with the manufacturer’s installation instructions and this TER. In the event of a conflict between the manufacturer’s installation instructions and this TER, the more restrictive shall govern.
6.2 Installation Procedure

![Diagram of installation procedure](image)

**Figure 3. Installation of FrameFAST™ Fasteners for Specific Applications**

6.2.1 Select a 6" FrameFAST™ fastener to fully embed the fastener into the top plate, blocking, and rim board as shown in Figure 3 and Figure 4.

6.2.1.1 Stud to Plate Connection – Install one (1) FrameFAST™ fastener upward (or downward) through the center of the stud and into the plate. Install at a 25°-35° angle (optimal angle = 33°) and penetrate the wood stud 3½" down from top of stud and within ¼" of the centerline (Figure 3).
6.2.1.2 Plate to Rim Connection – Install one (1) FrameFAST™ fastener upward (or downward) at a 0°-12° angle (optimal angle = 12°), 1½” from outside face of wall, through the plates, and into the rim (Figure 3 and Figure 4).

6.2.1.3 Plate to Blocking Connection – Install one (1) FrameFAST™ fastener upward (or downward) at a 0°-12° angle (optimal angle = 12°), 1½” from outside face of wall, through the plates and into the blocking (Figure 3 and Figure 4).

6.2.1.4 Plate to Rim/Blocking connection – Minimum required spacing and end distance of the FrameFAST™ fastener is 4” o.c (See Figure 5). Minimum edge and end distances are per Figure 3.

![Figure 5. Minimum Spacing and End Distance of FrameFAST™ Fasteners Plate to Rim/Blocking Connection](image)

6.2.2 Use a ½” low RPM/high torque drill to drive the fastener head flush with the surface of the wall framing or wood structural framing member.

7 TEST ENGINEERING SUBSTANTIATING DATA

7.1 FrameFAST™ fastener testing conduct by SBCRI, under contract with Qualtim, Inc., 2017 for the following conditions:

7.1.1 FrameFAST™ fastener uplift performance when used in stud to plate and plate to rim board connections.

7.1.2 FrameFAST™ fastener performance when loaded laterally in plate to rim board connections.

7.2 FrameFAST™ fastener testing conduct by SBCRI, under contract with Qualtim, Inc., 2018 for performance when laterally loaded with blocking.

7.3 Material property testing, conducted by the University of Montana – Wood Science Division, 2016.

7.4 Some information contained herein is the result of testing and/or data analysis by other sources which conform to *IBC Section 1703* and relevant professional engineering law. DrJ relies on accurate data from these sources to perform engineering analysis. DrJ has reviewed and found the data provided by other professional sources to be credible.

7.5 Where appropriate, DrJ’s analysis is based on design values that have been codified into law through codes and standards (e.g., *IBC*, *IRC*, *NDS®*, and *SDPWS*). This includes review of code provisions and any related test data that aids in comparative analysis or provides support for equivalency to an intended end-use application. Where the accuracy of design values provided herein is reliant upon the published properties of commodity materials (e.g., lumber, steel, and concrete), DrJ relies upon the grade mark, stamp, and/or design values provided by raw material suppliers to be accurate and conforming to the mechanical properties defined in the relevant material standard.
8 FINDINGS

8.1 When used and installed in accordance with this TER and the manufacturer’s installation instructions, the product(s) listed in Section 1.1 are approved for the following:

8.1.1 Provide resistance to lateral loads due to wind or seismic loads applied parallel or perpendicular to the wall in plate to rim board and plate to blocking applications, per Table 3.
8.1.2 Provide uplift resistance for all configurations considered per Table 3.
8.1.3 Fasten wall studs to single or double plate per Table 2.
8.1.4 Fasten double or single plate to blocking/rim board per Table 3.

8.2 IBC Section 104.11 (IRC Section R104.11 and IFC Section 104.9 are similar) states:

104.11 Alternative materials, design and methods of construction and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code. Where the alternative material, design or method of construction is not approved, the building official shall respond in writing, stating the reasons the alternative was not approved.

8.3 This product has been evaluated in the context of the codes listed in Section 2 and is compliant with all known state and local building codes. Where there are known variations in state or local codes applicable to this TER, they are listed here.

8.3.1 No known variations

9 CONDITIONS OF USE

9.1 Loads applied shall not exceed those recommended by the manufacturer or as defined in this TER.

9.2 The FrameFAST™ fasteners covered in this TER shall be installed in accordance with this TER and the manufacturer’s installation instructions.

9.2.1 For conditions not covered in this TER, connections shall be designed in accordance with accepted engineering practice.

9.3 Structural framing members connected with FrameFAST™ fasteners shall be designed in accordance with the requirements of their specific design standards/specifications as referenced in the building code adopted by the authority having jurisdiction (AHJ) in which the project is to be constructed.

9.4 Where required by the building official, also known as the AHJ in which the project is to be constructed, this TER and the installation instructions shall be submitted at the time of permit application.

9.5 Any generally accepted engineering calculations needed to show compliance with this TER shall be submitted to the AHJ for review and approval.

9.6 Design loads shall be determined in accordance with the building code adopted by the jurisdiction in which the project is to be constructed and/or by the Building Designer (e.g., owner or registered design professional).

9.7 At a minimum, this product shall be installed per Section 6 of this TER.

9.8 This product is manufactured under a third-party quality control program in accordance with IBC Section 104.4 and 110.4 and IRC Section R104.4 and R109.2.

9.9 The actual design, suitability, and use of this TER, for any particular building, is the responsibility of the owner or the owner's authorized agent. Therefore, the TER shall be reviewed for code compliance by the building official for acceptance.

9.10 The use of this TER is dependent on the manufacturer's in-plant QC, the ISO/IEC 17020 third-party quality assurance program and procedures, proper installation per the manufacturer’s instructions, the building official’s inspection, and any other code requirements that may apply to demonstrate and verify compliance with the applicable building code.
10 IDENTIFICATION

10.1 The product(s) listed in Section 1.1 are identified by a label on the board or packaging material bearing the manufacturer’s name, product name, TER number, and other information to confirm code compliance.

10.2 Additional technical information can be found at fastenmaster.com.

11 REVIEW SCHEDULE

11.1 This TER is subject to periodic review and revision. For the most recent version of this TER, visit drjcertification.org.

11.2 For information on the current status of this TER, contact DrJ Certification.
