Technical Evaluation Report

TER 1803-01

SWD Urethane Quik-Shield 104 Spray Polyurethane Foam (SPF) and Use in Unvented Attics & Crawlspace

SWD Urethane

Product:

SWD Urethane Quik-Shield 104 (QS 104)

Issue Date:
January 30, 2019

Revision Date:
September 5, 2019

Subject to Renewal:
April 1, 2020
1. Products Evaluated:
   1.1. SWD Urethane Quik-Shield 104 (QS 104)
   1.2. For the most recent version of this Technical Evaluation Report (TER), visit drjengineering.org. For more detailed state professional engineering and code compliance legal requirements and references, visit drjengineering.org/statelaw. DrJ is fully compliant with all state professional engineering and code compliance laws.
   1.3. This TER can be used to obtain product approval in any country that is an IAF MLA Signatory (all countries found here) and covered by an IAF MLA Evaluation per the Purpose of the MLA (as an example, see letter to ANSI from the Standards Council of Canada). Manufacturers can go to jurisdictions in the U.S., Canada and other IAF MLA Signatory Countries and have their products readily approved by authorities having jurisdiction using DrJ’s ANSI accreditation.
   1.4. Building code regulations require that evaluation reports are provided by an approved agency meeting specific requirements, such as those found in IBC Section 1703. Any agency accredited in accordance with ANSI ISO/IEC 17065 meets this requirement within ANSI’s scope of accreditation. For a list of accredited agencies, visit ANSI’s website. For more information, see drjcertification.org.
   1.5. Requiring an evaluation report from a specific private company (i.e., ICC-ES, IAPMO, CCMC, DrJ, etc.) can be viewed as discriminatory and is a violation of international, federal, state, provincial and local anti-trust and free trade regulations.
   1.6. DrJ’s code compliance work:
      1.6.1. Conforms to code language adopted into law by individual states and any relevant consensus based standard such as an ANSI or ASTM standard.
      1.6.2. Complies with accepted engineering practice, all professional engineering laws and by providing an engineer’s seal DrJ takes professional responsibility for its specified scope of work.

2. Applicable Codes and Standards:
   2.2. 2012, 2015 and 2018 International Residential Code (IRC)

---

1 Unless otherwise noted, all references in this code compliant technical evaluation report (TER) are from the 2018 version of the codes and the standards referenced therein, including, but not limited to, ASCE 7, SDPWS and WFCM. This product also complies with the 2000-2015 versions of the IBC and IRC and the standards referenced therein. As required by law, where this TER is not approved, the building official shall respond in writing, stating the reasons this TER was not approved. For variations in state and local codes, if any see Section 8.
Technical Evaluation Report (TER)

2.5. ASTM D1622 – Standard Test Method for Apparent Density of Rigid Cellular Plastics
2.7. ASTM D2126 – Standard Test Method for Response of Rigid Cellular Plastics to Thermal and Humid Aging
2.11. NFPA 286 – Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth

3. Performance Evaluation:

3.1. This TER assesses SWD Urethane QS 104 for the following:

3.1.1. Physical properties of the product in accordance with the standards listed in Section 2.
3.1.2. Surface burning characteristics complying with the provisions of IBC Section 2603.3 and IRC Section R316.3.
3.1.3. Thermal performance (R-values) complying with the provisions of IRC Section N1102 and IECC Section 402.
3.1.4. Air permeability in accordance with IRC Section N1102.4, and IECC Sections C402.5 and R402.4.
3.1.5. Use in unvented attic spaces and crawlspaces without a thermal barrier in accordance with IBC Section 2603.9 and IRC Sections R316.4 and R316.6.
3.1.6. Use without a thermal barrier in accordance with IBC Section 2603.3 and IRC Section R316.3 when International Fireproof Technology, Inc (IFTI) DC315 intumescent coating is applied.

3.2. Use in fire-resistance rated construction is outside the scope of this TER.

3.3. Any code compliance issues not specifically addressed in this section are outside the scope of this TER.
4. Product Description and Materials:

4.1. SWD Urethane QS 104 is an open-cell Spray Polyurethane Foam (SPF) insulation product.

4.1.1. Density: 0.4 pounds per cubic foot (pcf) (8 kg/m³).

4.2. SWD Urethane QS 104 is produced in the field by combining an isocyanate (Component A) with a proprietary resin (Component B).

5. Applications:

5.1. General

5.1.1. SWD Urethane QS 104 is used in the following applications:

5.1.1.1. Thermal insulation in buildings constructed in accordance with the IBC or IRC.

5.1.1.2. Sealant for penetrations as part of an air barrier system.

5.1.2. Where fire resistance rated construction is required, contact the manufacturer for more information.

5.2. Surface Burning Characteristics

5.2.1. SWD Urethane QS 104 has the surface burning characteristics as shown in Table 1.

5.5. Unvented Attic and Unvented Enclosed Rafter Assemblies

5.5.1. General

5.5.1.1. SWD Urethane QS 104 is approved for use in unvented attic and unvented, enclosed rafter assemblies in accordance with IBC Section 1202.3⁵ provided the following conditions are met:

5.5.1.1.1. For penetrating items not needing full coverage, the perimeter (annular space) of the items must be covered in the approved SPF at the minimum thickness allowed.

5.5.1.1.2. For all attic volumes, steel or copper pipes penetrating the roof deck or gable do not need to be covered in SPF since these will not melt in typical unvented attic fire scenarios.

5.5.1.1.3. Vinyl or other thin plastic flexible ducts/vents may not penetrate the roof deck or gable unless it is covered with minimum SPF of 3.5" (89 mm).

5.5.1.1.4. Other items penetrating the roof deck or gable not specifically named in this TER (other than steel or copper) need to be covered with SPF at a minimum thickness of 3.5" (89 mm).

5.5.1.2. SWD Urethane QS 104 shall be separated from the building interior by a thermal barrier consisting of a minimum ½" gypsum wallboard or equivalent in accordance with IBC Section 2603.4 or IRC Section R316.4,⁶ except in unvented attics and crawlspaces as described in Sections 5.5.2 and 5.5.3.

5.5.2. Application in an Unvented Attic without a Prescriptive Thermal Barrier or Ignition Barrier

5.5.2.1. When SWD Urethane QS 104 is applied in unvented attics conforming to IRC Section R806.5⁷, the following apply:

5.5.2.1.1. SPF shall be applied to the underside of roof sheathing to a minimum thickness of 3.5" (89 mm).

5.5.2.1.2. Roof rafter or truss top chord member edges may be left exposed.

5.5.2.1.3. SPF shall be applied to vertical wall surfaces to a minimum thickness of 3.5" (89 mm).

---

⁵ 2012 IBC Section 1203.3
⁶ Includes ⅝" (18.2 mm) wood structural panel.
⁷ 2009 IRC Section R806.4
5.5.2.1.4. Wall stud edges may be left exposed.

5.5.2.1.5. Maximum thickness of the SPF is 18" (508 mm) on the underside of roof sheathing or on the vertical wall surfaces.

5.5.2.1.6. SPF insulation may be left exposed to the attic without a thermal barrier, prescriptive ignition barrier, or an intumescent coating.

5.5.2.1.7. Attic shall have access complying with IRC Section R807, horizontally placed in the floor, and shall feature one of the following:

5.5.2.1.7.1. A downward-opening hatch,

5.5.2.1.7.2. A pull down stair or,

5.5.2.1.7.3. Access opening in accordance with IRC Section R807 using Rockfon® Pacific™ 201 Square Edge Ceiling Tile to cover the opening. The Rockfon® Pacific™ 201 ceiling tile shall have a maximum density of 8 pcf, a maximum binder content of 3% and shall be listed as a Class A product in accordance with ASTM E1264.

5.5.2.1.8. Vertical access openings are not permitted unless a project specific fire analysis is conducted that justifies its use.

5.5.2.2. ABS/PVC Vent Pipes

5.5.2.2.1. For attics up to 46,080 ft³ (1305 m³), any schedule 40 (minimum) ABS or PVC vent pipe does not need to be covered in SPF.

5.5.2.2.2. For attics larger than 46,080 ft³ (1305 m³), schedule 40 (minimum) ABS or PVC vent pipe penetrations shall be covered with SPF at a minimum thickness of 3.5" (89 mm), or may be left uncovered but limited in number and size such that the total area of holes created in the roof deck and gable do not exceed 36 in² (23,226 mm²).

5.5.2.2.3. ABS or PVC vent pipes thinner than schedule 40 (for any attic volume) must be covered with the minimum 3.5" (89 mm) of SPF, or may be left uncovered but limited in number and size such that the total area of holes created in the roof deck and gable do not exceed 36 in² (23,226 mm²).

5.5.2.3. Flexible Metallic Ducts/Vents/Pipes Penetrating the Roof Deck or Gable

5.5.2.3.1. For attics up to 46,080 ft³ (1305 m³), flexible metallic ducts/vents (aluminum or materials with higher melting/softening points than aluminum) or metallic vent pipes (aluminum or materials with higher melting/softening points than aluminum) penetrating the roof deck or gable do not need to be protected by the minimum 3.5" (89 mm) of SPF.

5.5.2.3.2. For attics greater than 46,080 ft³ (1305 m³), flexible metallic ducts/vents (aluminum or materials with lower melting/softening points than aluminum) or metallic vent pipes (aluminum or materials with lower melting/softening points than aluminum), the roof deck or gables must be protected with the minimum 3.5" (89 mm) of SPF, or may be left uncovered but limited in number and size such that the total area of holes created in the roof deck and gable do not exceed 36 in² (23,226 mm²).

5.5.2.4. Vinyl or Other Plastic HVAC Ducts/Vents Only Penetrating the Attic Floor (Supply and Return)

5.5.2.4.1. For all attic volumes, vinyl or other plastic HVAC ducts/vents that only penetrate the attic floor do not need to be protected with SPF if the HVAC unit is alarmed to switch off with smoke or heat alarm switches within the attic space. Otherwise, the plastic HVAC duct must be protected by the minimum 3.5" (89 mm) of SPF.

5.5.2.5. Flexible Metallic HVAC Ducts/Vents Only Penetrating the Attic Floor (Supply and Return)

5.5.2.5.1. For attics up to 46,080 ft³ (1305 m³), flexible metallic ducts/vents (aluminum or materials with higher melting/softening points than aluminum) that only penetrate the attic floor do not need to be protected with SPF. The HVAC unit does not need to be alarmed to switch off with smoke or heat alarm switches within the attic space for this application.
5.5.2.5.2. For attics greater than 46,080 ft³ (1305 m³), flexible metallic HVAC ducts or vents (aluminum or materials with higher melting/softening points than aluminum) that only penetrate the attic floor do not need to be protected with SPF if the HVAC unit is alarmed to switch off with smoke or heat alarm switches within the attic space. Otherwise, the flexible metallic HVAC duct must be protected by the minimum 3.5" (89 mm) SPF.

5.5.3. Application in an Unvented Crawlspace without a Prescriptive Thermal Barrier or Ignition Barrier

5.5.3.1. When SWD Urethane QS 104 is applied in unvented crawlspaces conforming to IRC Section R408.3, the:

5.5.3.1.1. SPF shall be applied to the underside of upper surface to a minimum thickness of 3.5" (89 mm).
5.5.3.1.2. SPF shall be applied to vertical wall surfaces to a minimum thickness of 3.5" (89 mm).
5.5.3.1.3. Wall stud edges may be left exposed.
5.5.3.1.4. Maximum thickness of the SPF is 18" (356 mm) on the underside of the upper surface or on the vertical wall surfaces.
5.5.3.1.5. SPF insulation may be left exposed to the crawlspace without a thermal barrier, prescriptive ignition barrier, or an intumescent coating.
5.5.3.1.6. Crawlspace access shall be provided in accordance with IRC Section R408.4.
5.5.3.1.7. Enclosures for items penetrating the upper surface or walls, such as plumbing and venting systems, shall be covered with a minimum of 3.5" (89 mm) of SWD Urethane QS 104 insulation.

5.5.3.2. Where the application exceeds the limitations set forth herein, design shall be permitted in accordance with accepted engineering procedures, experience and technical judgment.

5.6. Application for Use as an Interior Finish without the Use of a Thermal Barrier or Ignition Barrier When Used with the Addition of IFTI DC315 Intumescent Coating

5.6.1. SWD Urethane QS 104 SPF with a covering of DC315, applied in accordance with Table 4, was tested to NFPA 286 and met the acceptance criteria of IBC Section 803.1.2.1.

5.6.2. When DC315 is applied to QS 104 SPF in accordance with Table 4, the assembly shall be permitted to be installed without a thermal barrier or ignition barrier in accordance with IBC Section 2603.9.

6. Installation:

6.1. General

6.1.1. Installation shall comply with the manufacturer's installation instructions and this TER. In the event of a conflict between the manufacturer's installation instructions and this TER, the more restrictive shall govern.

6.1.2. SPF insulation shall be applied by licensed dealers and installers certified by SWD Urethane.

6.1.3. A copy of the manufacturer's published installation instructions shall be available at all times on the jobsite during installation.

6.1.4. In the event of a conflict between the manufacturer's installation instructions and this TER, the more restrictive shall govern.
6.1.5. SWD Urethane QS 104 shall be applied to the framing using two-component spray equipment and shall be applied using a 1:1 ratio of Component A and Component B.

6.1.6. The substrate shall be dry and free of frost, ice, rust, oil, grease, dirt or any other substances that may prevent adhesion of the SPF to the substrate.

6.1.7. SWD Urethane QS 104 is intended for interior use only and is not to be used where it could come in contact with water. Provide protection from weather during and after installation.

6.1.8. Where used as an air barrier in unventilated attics, the insulation shall be installed to the minimum thickness required and shall be installed in accordance with the provisions of IRC Section R806.

6.1.9. SWD Urethane QS 104 may be installed to the required thickness with one pass of the spray equipment. If installation using multiple passes is desired, no cure time is required between passes.

6.1.10. Do not use SWD Urethane QS 104 inside of electrical or junction boxes.

6.1.11. SWD Urethane QS 104 shall be installed only when the temperature is at or above 14°F (-10°C).

6.1.12. Insulation shall not be installed in areas where the service temperature is greater than 180°F (82°C).

7. Test and Engineering Substantiating Data:

7.1. Testing and data determining the material properties of SWD Urethane QS 104 by QAI Laboratories, Inc.

7.2. Testing showing surface burning characteristics in accordance with ASTM E84 by QAI Laboratories, Inc.

7.3. Testing as an air barrier material in accordance with ASTM E2178 by QAI Laboratories, Inc.

7.4. Fire testing and analysis of SWD QS 104 with IFTI DC315 Intumescent Coating in accordance with NFPA 286, performed by QAI Laboratories, Inc.

7.5. Engineering analysis of cone calorimeter testing of SWD QS 104 foam for use in unvented attics and equivalency to QS 106 by Priest & Associates Consulting, LLC.

7.6. Engineering analysis justifying omittance of requirement to cover entire length of items penetrating roof deck with 3½ inches (89 mm) of SWD QS 106 or QS 108 by Priest & Associates Consulting, LLC.

7.7. Engineering analysis of Rockfon® Pacific™ 201 ceiling panels by Priest & Associates Consulting, LLC.

7.8. Engineering analysis of use of SWD QS 106 SPF in unvented attics without an ignition barrier.

7.9. The product(s) evaluated by this TER fall within the scope of one or more of the model, state or local building codes for building construction. The testing and/or substantiating data used in this TER is limited to buildings, structures, building elements, construction materials and civil engineering related specifically to buildings.

7.10. The provisions of model, state or local building codes for building construction do not intend to prevent the installation of any material or to prohibit any design or method of construction. Alternatives shall use consensus standards, performance-based design methods or other engineering mechanics based means of compliance. This TER assesses compliance with defined standards, accepted engineering analysis, performance-based design methods, etc. in the context of the pertinent building code requirements.

7.11. Some information contained herein is the result of testing and/or data analysis by other sources, which DrJ relies on to be accurate, as it undertakes its engineering analysis.

7.12. DrJ has reviewed and found the data provided by other professional sources are credible. The information in this TER conforms with DrJ’s procedure for acceptance of data from approved sources.

7.13. DrJ’s responsibility for data provided by approved sources conforms with IBC Section 1703 and any relevant professional engineering law.
7.14. Where appropriate, DrJ’s analysis is based on design values that have been codified into law through codes and standards (e.g., IRC, WFCM, IBC, SDPWS, NDS, ACI, AISI, PS-20, PS-2, etc.). This includes review of code provisions and any related test data that aids in comparative analysis or provides support for equivalency to an intended end-use application. Where the accuracy of design values provided herein is reliant upon the published properties of commodity materials (e.g., lumber, steel, concrete, etc.), DrJ relies upon grade/properties provided by the raw material supplier to be accurate and conforming to the mechanical properties defined in the relevant material standard.

8. Findings:

8.1. When installed in accordance with the manufacturer’s installation instructions and this TER, SWD Urethane QS 104 complies with, or is a suitable alternative to, the applicable sections of the codes listed in Section 2 for the following applications:

8.1.1. Surface burning characteristics complying with the provisions of *IBC Section 2603.3* and *IRC Section R316.3*.

8.1.2. Thermal performance (R-values) complying with the provisions of *IRC Section N1102* and *IECC Section 402*.

8.1.3. Air permeability in accordance with *IRC Section N1102.4*, and *IECC Sections C402.5* and *R402.4*.  
8.1.4. Use in unvented attic spaces and crawlspaces without a thermal barrier in accordance with *IBC Section 2603.9* and *IRC Sections R316.4* and *R316.6*.  
8.1.5. Use without a thermal barrier in accordance with *IBC Section 2603.3* and *IRC Section R316.3* when IFTI DC315 intumescent coating is applied.

8.2. *IBC Section 104.11* and *IRC Section R104.11* (*IFC Section 104.9* is similar) state:

**Alternative materials, design and methods of construction and equipment.** The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code. ... Where the alternative material, design or method of construction is not approved, the building official shall respond in writing, stating the reasons the alternative was not approved.

8.3. This product has been evaluated in the context of codes listed in Section 2, and is compliant with all known state and local building codes. Where there are known variations in state or local codes that are applicable to this evaluation, they are listed here:

8.3.1. No known variations

8.4. This TER uses professional engineering law, the building code, ANSI/ASTM consensus standards and generally accepted engineering practice as its criteria for all testing and engineering analysis. DrJ’s professional engineering work falls under the jurisdiction of each state board of professional engineers, when signed and sealed.

9. Conditions of Use:

9.1. Where required by the authority having jurisdiction (AHJ) in which the project is to be constructed, this TER and the installation instructions shall be submitted at the time of permit application.

9.2. Any generally accepted engineering calculations needed to show compliance with this TER shall be submitted to the code official for review and approval.

9.3. Design loads shall be determined in accordance with the building code adopted by the jurisdiction in which the project is to be constructed and/or by the Building Designer (e.g., Owner, Registered Design Professional, etc.).

---

The above text includes references to various codes and standards, such as *IBC*, *IRC*, *WFCM*, *SDPWS*, *NDS*, *ACI*, *AISI*, *PS-20*, *PS-2*, *IFC*, *2012 IECC Section C402.4*, *2012 IBC Section 2603.10*, and *2015 IRC Section R316.4*. These codes and standards provide the basis for the technical evaluation and compliance claims made in the TER.
9.4. SWD Urethane QS 104 insulation described in this TER comply with, or are suitable alternatives to, what is specified in the codes listed in Section 2, subject to the following conditions: The manufacturer’s installation instructions and this TER shall be available on the jobsite for inspection.

9.4.2. The SPF insulation shall be installed in accordance with the manufacturer’s published installation instructions, this TER and the applicable code. If there is a conflict between the installation instructions and this TER, the more restrictive governs.

9.4.3. The SPF insulation shall be separated from the interior of the building by an approved 15-minute thermal barrier, except as noted in this TER.

9.4.4. When installed in unvented attics without a code-prescribed ignition barrier or thermal barrier, the installation shall meet the conditions outlined in Section 5.5.

9.4.5. The use of vertical access openings into the unvented attic space is prohibited unless a project specific engineering analysis is conducted to permit their use.

9.4.6. The SPF insulation shall meet the minimum thicknesses and densities noted in this TER.

9.4.7. The SPF insulation shall be protected from the weather during and after application.

9.4.8. The SPF insulation shall be applied by SWD Urethane approved dealers and installers.

9.4.9. Use of the SPF insulation in areas where the probability of termite infestation is “very heavy” shall be in accordance with IBC Section 2603.8 and IRC Section R318.4 as applicable.

9.4.10. Jobsite certification and labeling of the SPF insulation shall comply with IRC Section N1101.10.1 and N1101.10.1.1 and IECC Section 303.1.1 and 3030.1.1.1.

9.4.11. A vapor retarder shall be installed in accordance with the applicable code.

9.4.12. The components used to produce SWD Urethane QS 104 are manufactured in Mesa, AZ, under a quality control program with inspections in accordance with IBC Section 2603.2 and IRC Section R316.2.

9.5. Design

9.5.1. Building Designer Responsibility

9.5.1.1. Unless the AHJ allows otherwise, the Construction Documents shall be prepared by a Building Designer for the Building and shall be in accordance with IRC Section R106 and IBC Section 107.

9.5.1.2. The Construction Documents shall be accurate and reliable and shall provide the location, direction and magnitude of all applied loads and shall be in accordance with IRC Section R301 and IBC Section 1603.

9.5.2. Construction Documents

9.5.2.1. Construction documents shall be submitted to the building official for approval and shall contain the plans, specifications and details needed for the building official to approve such documents.

9.6. Responsibilities

9.6.1. The information contained herein is a product, material, detail, design and/or application TER evaluated in accordance with the referenced building codes, testing and/or analysis through the use of accepted engineering practice, experience and technical judgment.

9.6.2. DrJ TERs provide an assessment of only those attributes specifically addressed in the Products Evaluated or Code Compliance Process Evaluated sections.

9.6.3. The engineering evaluation was performed on the dates provided in this TER, within DrJ's professional scope of work.

9.6.4. This product is manufactured under a third-party quality control program in accordance with IRC Section R104.4 and R109.2 and IBC Section 104.4 and 110.4.

9.6.5. The actual design, suitability and use of this TER, for any particular building, is the responsibility of the Owner or the Owner's authorized agent, and the TER shall be reviewed for code compliance by the Building Official.
9.6.6. The use of this TER is dependent on the manufacturer’s in-plant QC, the ISO/IEC 17020 third-party quality assurance program and procedures, proper installation per the manufacturer’s instructions, the Building Official’s inspection and any other code requirements that may apply to demonstrate and verify compliance with the applicable building code.

10. Identification:

10.1. SWD Urethane QS 104 described in this TER is identified by a label on the containers bearing the manufacturer’s name, product name, TER number, label of the third-party inspection agency, and other information to confirm code compliance.

10.2. Additional technical information can be found at swdurethane.com.

11. Review Schedule:

11.1. This TER is subject to periodic review and revision. For the most recent version of this TER, visit drjengineering.org.

11.2. For information on the current status of this TER, contact DrJ Engineering.
