Technical Evaluation Report

TER 1802-03

SPAX® 5/16" PowerLag® Fasteners for Use in Multi-Ply Truss, Sawn Lumber and Engineered Wood Product Assemblies

Altenloh, Brinck & Company
U.S., Inc

Product:

SPAX® 5/16" T-Star Washer Head PowerLag® Fasteners

Issue Date:
February 21, 2019

Revision Date:
June 5, 2020

Subject to Renewal:
April 1, 2021
1 PRODUCT EVALUATED

1.1 SPAX® 5/16" T-Star Washer Head PowerLag® Fasteners

2 APPLICABLE CODES AND STANDARDS

2.1 Codes

2.1.1 IBC—12, 15, 18: International Building Code®

2.1.2 IRC—12, 15, 18: International Residential Code®

2.2 Standards and Referenced Documents

2.2.1 ANSI/AWC NDS: National Design Specification (NDS) for Wood Construction

2.2.2 ASTM A153: Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

2.2.3 ASTM A510: Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel, and Alloy Steel

2.2.4 ASTM B117: Standard Practice for Operating Salt Spray (Fog) Apparatus

2.2.5 ASTM D1761: Standard Test Methods for Mechanical Fasteners in Wood

1 Building codes require data from valid research reports be obtained from approved sources. Agencies who are accredited through ISO/IEC 17065 have met the code requirements for approval by the building official. DrJ is an ISO/IEC 17065 ANAB-Accredited Product Certification Body – Accreditation #1131.

Through ANAB accreditation and the IAF MLA, DrJ certification can be used to obtain product approval in any jurisdiction or country that has IAF MLA Members & Signatories to meet the Purpose of the MLA – “certified once, accepted everywhere.”

Building official approval of a licensed registered design professional (RDP) is performed by verifying the RDP and/or their business entity complies with all professional engineering laws of the relevant jurisdiction. Therefore, the work of licensed RDPs is accepted by building officials, except when plan (i.e. peer) review finds an error with respect to a specific section of the code. Where this TER is not approved, the building official responds in writing stating the reasons for disapproval. For more information on any of these topics or our mission, product evaluation policies, product approval process, and engineering law, visit drjcertification.org or call us at 608-310-6748.

2 Unless otherwise noted, all references in this TER are from the 2018 version of the codes and the standards referenced therein (e.g., ASCE 7, NDS, ASTM). This material, design, or method of construction also complies with the 2000–2015 versions of the referenced codes and the standards referenced therein.

3 All terms defined in the applicable building codes are italicized.
2.2.6 ASTM D2395: Standard Test Methods for Density and Specific Gravity (Relative Density) of Wood and Wood-Based Materials

2.2.7 ASTM D4442: Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials

2.2.8 ASTM G85: Standard Practice for Modified Salt Spray (Fog) Testing

3 PERFORMANCE EVALUATION

3.1 SPAX® PowerLag® fasteners were evaluated to determine their ability to provide multi-ply attachment in trusses, sawn lumber, and engineered wood applications.

3.2 Corrosion resistance in accordance with ASTM B117 and ASTM G85, Annex A5.

3.3 Any code compliance issues not specifically addressed in this section are outside the scope of this TER.

3.4 Any engineering evaluation conducted for this TER was performed on the dates provided in this TER and within DrJ’s professional scope of work.

4 PRODUCT DESCRIPTION AND MATERIALS

4.1 The product evaluated in this TER is shown in Figure 1.

![Figure 1. SPAX® 5/16” T-STAR WASHER HEAD POWERLAG® FASTENERS FOR MULTI-PLY ASSEMBLIES (IN)](image)

4.2 SPAX® PowerLag® fasteners are manufactured with carbon steel grade 1022 or 10B21 wire conforming to ASTM A510 or grade 17MnB3 or 19MnB4 wire conforming to DIN 1654.

4.3 SPAX® PowerLag® fasteners are manufactured using a standard cold-formed process followed by a heat-treating process. Allowable bending yield and critical dimensions are found in Figure 1 and Table 1.

4.3.1 SPAX® PowerLag® fasteners have a gimlet point.

4.3.2 SPAX® 5/16” PowerLag® fastener heads are T-40 T-Star drive.

4.4 SPAX® PowerLag® fasteners are available with proprietary coatings:

4.4.1 Interior Grade: Yellow Electro-Zinc with Wax meeting ASTM F1941

4.4.2 Exterior Grade: Proprietary HCR™ that exceed the protection provided by code approved hot-dipped galvanized coatings meeting ASTM A153 (IBC Section 2304.10.5 and IRC Section R317.3).

4.4.2.1 HCR™ coating is approved for use in ground contact pressure treated wood (ACQ) in general construction (freshwater) applications.

---

4 2012 IBC Section 2304.9.5

---

SUBJECT TO RENEWAL 4/1/2021

© 2020 DRJ ENGINEERING, LLC
4.4.2.2 HCR™ coated fasteners are approved for use in fire-retardant-treated lumber, provided the conditions set forth by the fire-retardant-treated lumber manufacturer are met, including appropriate strength reductions.

4.5 The fasteners evaluated in this TER are set forth in Table 1.

For SI: 1" = 25.4 mm, 1lbf = 4.45 N, 1 psi = 6.895 kPa.
1. Fastener length is measured from the underside of the head to the tip.
2. Thread length includes tip (see Figure 1).
3. Determined in accordance with methods specified in ASTM F1575, based on minor thread diameter using a 5% offset of the load displacement curves developed from bending tests.
4. Fastener dimensions are as measured on uncoated fasteners.

5 Applications

5.1 SPAX® PowerLag® fasteners are used for attaching multi-ply wood members including trusses, sawn lumber, and engineered wood products.

5.2 Where the application exceeds the limitations set forth herein, design shall be permitted in accordance with accepted engineering procedures, experience, and technical judgment.

5.3 Design

5.3.1 Design of SPAX® PowerLag® fasteners is governed by the applicable code and the provisions for dowel type fasteners in NDS.

5.3.2 Unless otherwise noted, adjustment of the design stresses for duration of load shall be in accordance with the applicable code.

5.4 Multi-ply Connection Design Values

5.4.1 SPAX® 5/16" PowerLag® Fastener for Multi-Ply Truss and Sawn Lumber Assemblies

5.4.1.1 SPAX® 5/16" PowerLag® fasteners lengths for truss and sawn lumber assemblies have the design values set forth in Table 2. Assembly conditions are detailed in Figure 2.
### Table 2. Allowable Design Values (PLF) for Multi-Ply Truss and Sawn Lumber Assemblies³,⁴

</tbody>
</table>

For SI: 1" = 25.4 mm, 1plf = 14.59 N/m

1. Fastener length is measured from the underside of the head to the tip.
2. Thread length includes tip (see Figure 1).
3. For wood species with an assigned specific gravity between 0.42 and 0.50, use the tabulated values for specific gravity of 0.42. For wood species with an assigned specific gravity greater than 0.50, use the tabulated values for specific gravity of 0.50.
4. Allowable loads are based on a load duration factor \( C_D = 1.0 \) and shall be multiplied by all applicable adjustment factors per the NDS.
5. The tabulated allowable design loads may be applied to either side of the beam (head or point side of the fastener). Where loads are applied to both sides of the beam simultaneously, the total load applied to the beam shall not exceed the tabulated load.
6. All design values are also applicable to top-loaded assemblies with even loading across the width of the entire assembly. For top-loaded members, fasteners shall be installed in two (2) rows with a maximum distance of 32" o.c. between fasteners in the same row.

</tbody>
</table>

For SI: 1" = 25.4 mm, plf = 14.59 N/m
1. Fastener length is measured from the underside of the head to the tip.
2. Thread length includes tip; see Figure 1.
3. Wood members shall have an equivalent specific gravity of 0.50 or greater.
4. Allowable loads are based on a load duration factor C0 = 1.0 and shall be multiplied by all applicable adjustment factors per the NDS.
5. The tabulated allowable design loads may be applied to either side of the beam (head or point side of the fastener). Where loads are applied to both sides of the beam simultaneously, the total load applied to the beam shall not exceed the tabulated load.
6. All design values are also applicable to top-loaded assemblies with even loading across the width of the entire assembly. For top-loaded members up to 18" deep, fasteners shall be installed in two (2) rows with a maximum distance of 24" o.c. between fasteners in the same row. Use three (3) rows for members deeper than 18".

5.5 Spacing, Edge Distance and End Distance

5.5.1 SPAX® PowerLag® fastener spacing, edge distances, and end distances shall be as specified in Table 4.

TABLE 4. SPACING, EDGE DISTANCE, AND END DISTANCE REQUIREMENTS

<table>
<thead>
<tr>
<th>Fastener Name</th>
<th>Shank Diameter (in)</th>
<th>Min. Edge Distance (in)</th>
<th>Minimum Spacing (in) Between Rows</th>
<th>Minimum Spacing (in) Between Fasteners in Row</th>
<th>Minimum End Distance (in) Parallel to Grain Toward Bearing</th>
<th>Minimum End Distance (in) Parallel to Grain Away from Bearing</th>
<th>Minimum End Distance (in) Parallel to Grain Perpendicular to Grain</th>
</tr>
</thead>
<tbody>
<tr>

<td>1/4</td>
<td>1/8</td>
<td>5/8</td>
<td>3/4</td>
<td>2 1/16</td>
<td>3/4</td>
</tr>
</tbody>
</table>

For SI: 1" = 25.4 mm
1. Edge distances, end distances, and spacing of fasteners shall be sufficient to prevent splitting of the wood or as shown in this table, whichever is the more restrictive.

6 INSTALLATION

6.1 Installation shall comply with the manufacturer’s installation instructions and this TER. In the event of a conflict between the manufacturer’s installation instructions and this TER, the more restrictive shall govern.

6.2 Installation Procedure

6.2.1 The 5/16" PowerLag® structural wood fastener must be installed with a ½" (12.7 mm), low rpm/high torque electric drill (450 rpm) or impact wrench using the appropriate driver bit. Do not overdrive.

6.2.2 Install PowerLag® fasteners such that as many threads fully engage the main member (final member in multi ply assembly) as possible when head is fully seated against the lumber.

6.2.3 Lead holes are not required.

6.2.4 For applications outside the scope of this TER, an engineered design is required.
7 Test Engineering Substantiating Data

7.1 ANSI/AWC NDS: National Design Specification (NDS) for Wood Construction

7.2 Lateral resistance data in accordance with ASTM D1761, University of Montana.

7.3 Some information contained herein is the result of testing and/or data analysis by other sources which conform to IBC Section 1703 and relevant professional engineering law. DrJ relies on accurate data from these sources to perform engineering analysis. DrJ has reviewed and found the data provided by other professional sources to be credible.

7.4 Where appropriate, DrJ’s analysis is based on design values that have been codified into law through codes and standards (e.g., IBC, IRC, NDS®, and SDPWS). This includes review of code provisions and any related test data that aids in comparative analysis or provides support for equivalency to an intended end-use application. Where the accuracy of design values provided herein is reliant upon the published properties of commodity materials (e.g., lumber, steel, and concrete), DrJ relies upon the grade mark, stamp, and/or design values provided by raw material suppliers to be accurate and conforming to the mechanical properties defined in the relevant material standard.

8 Findings

8.1 When used in accordance with this TER and the manufacturer’s installation instructions, PowerLag® fasteners are suitable to provide multi-ply attachment in trusses, sawn lumber, and engineered wood applications.

8.1.1 PowerLag® fasteners with HCR™ coating are approved for use in ground contact pressure treated wood (ACQ) in general construction (freshwater) applications.

8.2 HCR™ and HCR-X™ Coated Fasteners are approved for use in fire-retardant-treated lumber, provided the conditions set forth by the fire-retardant-treated lumber manufacturer are met, including appropriate strength reductions.

8.3 IBC Section 104.11 (IRC Section R104.11 and IFC Section 104.9 are similar) states:

104.11 Alternative materials, design and methods of construction and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code...Where the alternative material, design or method of construction is not approved, the building official shall respond in writing, stating the reasons the alternative was not approved.

8.4 This product has been evaluated in the context of the codes listed in Section 2 and is compliant with all known state and local building codes. Where there are known variations in state or local codes applicable to this evaluation, they are listed here.

8.4.1 No known variations

9 Conditions of Use

9.1 Where required by the building official, also known as the authority having jurisdiction (AHJ) in which the project is to be constructed, this TER and the installation instructions shall be submitted at the time of permit application.

9.2 Any generally accepted engineering calculations needed to show compliance with this TER shall be submitted to the AHJ for review and approval.

9.3 Design loads shall be determined in accordance with the building code adopted by the jurisdiction in which the project is to be constructed and/or by the Building Designer (e.g., owner or registered design professional).

9.4 At a minimum, this product shall be installed per Section 6 of this TER.
9.5 This product is manufactured under a third-party quality control program in accordance with *IBC Section 104.4 and 110.4* and *IRC Section R104.4 and R109.2*.

9.6 The actual design, suitability, and use of this TER, for any particular building, is the responsibility of the *owner* or the owner’s authorized agent. Therefore, the TER shall be reviewed for code compliance by the *building official* for acceptance.

9.7 The use of this TER is dependent on the manufacturer’s in-plant QC, the ISO/IEC 17020 third-party quality assurance program and procedures, proper installation per the manufacturer’s instructions, the *building official’s* inspection, and any other code requirements that may apply to demonstrate and verify compliance with the applicable building code.

10 IDENTIFICATION

10.1 The product(s) listed in Section 1.1 are identified by a label on the board or packaging material bearing the manufacturer’s name, product name, TER number, and other information to confirm code compliance.

10.2 Additional technical information can be found at [www.spax.us](http://www.spax.us).

11 REVIEW SCHEDULE

11.1 This TER is subject to periodic review and revision. For the most recent version of this TER, visit [drjcertification.org](http://drjcertification.org).

11.2 For information on the current status of this TER, contact [DrJ Certification](http://www.spax.us).
