Technical Evaluation Report
TER 1811-03
QuickTie™ U-Hanger Series Face Mount
Joist Hangers

QuickTie™ Products, Inc.

Product:
QuickTie™ U-Hanger Series

Issue Date:
June 14, 2019
Revision Date:
September 4, 2019
Subject to Renewal:
July 1, 2020
QuickTie™ U-Hanger Series Face Mount Joist Hangers

QuickTie™ Products, Inc.

DIVISION: 06 00 00 – WOOD, PLASTICS, AND COMPOSITES
Section: 06 05 23 – Wood, Plastic, and Composite Fastenings

1. Products Evaluated:
   1.1. QuickTie™ U-Hanger Series
      1.1.1. UL Series – 20 gauge (ga.)
      1.1.2. ULP & ULP-IF (Inverted Flange) Series – 18 ga.
      1.1.3. UM Series – 16 ga.
      1.1.4. UH & UH-IF (Inverted Flange) Series – 14 ga.

1.2. For the most recent version of this Technical Evaluation Report (TER), visit driengineering.org. For more detailed state professional engineering and code compliance legal requirements and references, visit driengineering.org/statelaw. DrJ is fully compliant with all state professional engineering and code compliance laws.

1.3. This TER can be used to obtain product approval in any country that is an IAF MLA Signatory (all countries found here) and covered by an IAF MLA Evaluation per the Purpose of the MLA (e.g., see letter to ANSI from the Standards Council of Canada). Manufacturers can go to jurisdictions in the U.S., Canada and other IAF MLA Signatory Countries and have their products readily approved by authorities having jurisdiction using DrJ’s SI accreditation.

1.4. Building code regulations require that evaluation reports are provided by an approved agency meeting specific requirements, such as those found in IBC Section 1703. Any agency accredited in accordance with ANSI ISO/IEC 17065 meets this requirement within ANSI’s scope of accreditation. For a list of accredited agencies, visit ANSI’s website. For more information, see drjcertification.org.

1.5. Requiring an evaluation report from a specific private company (i.e., ICC-ES, IAPMO, CCMC, DrJ, etc.) can be viewed as discriminatory and is a violation of international, federal, state, provincial and local anti-trust and free trade regulations.

1.6. DrJ’s code compliance work:
   1.6.1. Conforms to code language adopted into law by individual states and any relevant consensus based standard such as an ANSI or ASTM standard.
   1.6.2. Complies with accepted engineering practice, all professional engineering laws and by providing an engineer’s seal DrJ takes professional responsibility for its specified scope of work.
2. Applicable Codes and Standards:

2.3. 2012, 2015 and 2018 International Residential Code (IRC)
2.4. AISC 360 – Specification for Structural Steel Buildings
2.5. AISI S100 – North American Specification for the Design of Cold-formed Steel Structural Members
2.6. ANSI/AWC – National Design Specification (NDS) for Wood Construction
2.7. ASTM A370 – Standard Test Methods and Definitions for Mechanical Testing of Steel Products
2.9. ASTM F1575 – Standard Test Method for Determining Bending Yield Moment of Nails

3. Performance Evaluation:

3.1. This TER evaluates QuickTie™ U-Hanger Series Face Mount Joist Hangers for:
   3.1.1. Structural performance of connectors under uplift and gravity load conditions.
   3.1.2. Performance for use in buildings of light-frame construction in accordance with the codes listed in Section 2.

3.2. Products, materials, and configurations not highlighted in the tables of this report are outside the scope of this TER.
3.3. Any code compliance issues not specifically addressed in this section are outside the scope of this TER.

4. Product Description and Materials:

4.1. QuickTie™ U-Hanger Series
4.1.1. QuickTie™ U-Hanger Series Face Mount Joist Hangers are manufactured from minimum ASTM A653, Structural Steel, Grade 40 (F_u = 55 ksi, F_y = 40 ksi) steel galvanized with a G90 zinc coating. The U-Hanger series are designated as follows:

1. UL Series – 20 ga. (minimum coated thickness = 0.0356"

2. ULP & ULP-IF Series – 18 ga. (minimum coated thickness = 0.0466"

3. UM Series – 16 ga. (minimum coated thickness = 0.0575"

4. UH & UH-IF Series – 14 ga. (minimum coated thickness = 0.0705"

5. Applications:

5.1. General

5.1.1. QuickTie™ U-Hanger Series Face Mount Joist Hangers are used to resist gravity loads and uplift loads due to wind in one-, two- and three-ply joist assemblies in light-frame wood construction.

5.1.2. QuickTie™ U-Hanger Series Face Mount Joist Hangers are used as wood framing connectors in accordance with IBC Section 2304.10.3 and IRC Section R301.1.3.

5.1.3. Where the application exceeds the limitations set forth herein, design shall be permitted in accordance with accepted engineering procedures, experience, and technical judgment.

5.2. Hanger Design Values

5.2.1. Table 1 through Table 4 give the allowable gravity and uplift loads for U-Hanger connectors with one-ply, two-ply, and three-ply lumber.

5.2.2. The design values in Table 1 through Table 4 were derived using the applicable adjustment factors in ASTM D7147 per IBC Section 2303.5.

5.2.3. The responsible design professional (RDP) for project shall determine which type of U-Hanger is appropriate using Table 1 through Table 4.

5.2.4. Table Notes

1. The following notes apply to Table 1 through Table 4.

2. Nails designated as 16d shall be 16d common nails (0.162" x 3.5", F_yb = 90,000 psi) and 10d shall be 10d common nails (0.148" x 3", F_yb = 90,000 psi).

3. Allowable loads are provided for load duration factors (C_D) of 1.0, 1.15, 1.25 and 1.6.

4. Allowable loads labeled “Floor” and “Roof” represent gravity loads.

SI: 1" = 25.4 mm, 1 lbf = 4.5 N
See notes in Section 5.2.4.
6. Installation:

6.1. QuickTie™ U-Hanger Series Face Mount Joist Hangers shall be installed in accordance with the manufacturer’s published installation instructions and this TER. In the event of a conflict between the manufacturer’s installation instructions and this TER, the more restrictive shall govern.

6.2. A copy of the manufacturer’s published installation instructions shall be available at all times on the jobsite during installation.

7. Test and Engineering Substantiating Data:

7.1. Bending yield testing in accordance with ASTM F1575, performed by Structural Building Components Research Institute (SBCRI).

7.2. Tensile strength testing in accordance with ASTM A370, performed by SBCRI.

7.3. Gravity and uplift load testing in accordance with ASTM D7147, performed by SBCRI.

7.4. The product(s) evaluated by this TER fall within the scope of one or more of the model, state or local building codes for building construction. The testing and/or substantiating data used in this TER is limited to buildings, structures, building elements, construction materials and civil engineering related specifically to buildings.

7.5. The provisions of model, state or local building codes for building construction do not intend to prevent the installation of any material or to prohibit any design or method of construction. Alternatives shall use consensus standards, performance-based design methods or other engineering mechanics based means of compliance. This TER assesses compliance with defined standards, accepted engineering analysis, performance-based design methods, etc. in the context of the pertinent building code requirements.

7.6. Some information contained herein is the result of testing and/or data analysis by other sources, which DrJ relies on to be accurate, as it undertakes its engineering analysis.

7.7. DrJ has reviewed and found the data provided by other professional sources are credible. The information in this TER conforms to DrJ’s procedure for acceptance of data from approved sources.
7.8. DrJ’s responsibility for data provided by approved sources conforms to IBC Section 1703 and any relevant professional engineering law.

7.9. Where appropriate, DrJ relies on the derivation of design values, which have been codified into law through codes and standards (e.g., IRC, WFCM, IBC, SDPWS, NDS, ACI, AISI, PS-20, PS-2, etc.). This includes review of code provisions and any related test data that aids in comparative analysis or provides support for equivalency to an intended end-use application. Where the accuracy of design values provided herein is reliant upon the published properties of commodity materials (e.g., lumber, steel, concrete, etc.), DrJ relies upon grade/properties provided by the raw material supplier to be accurate and conforming to the mechanical properties defined in the relevant material standard.

8. Findings:

8.1. Based on data and engineering analysis, QuickTie™ U-Hanger Series Face Mount Joist Hangers as described in this TER conform to the codes listed in Section 2.

8.2. QuickTie™ U-Hanger Series Face Mount Joist Hangers are approved for use where the design values listed in Table 1 through Table 4 meet the requirements of the building design.

8.3. IBC Section 104.11 (IRC Section R104.11 and IFC Section 104.9 are similar) states:

104.11 Alternative materials, design and methods of construction and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code. ... Where the alternative material, design or method of construction is not approved, the building official shall respond in writing, stating the reasons the alternative was not approved.

8.4. This product has been evaluated with the codes listed in Section 2, and is compliant with all known state and local building codes. Where there are known variations in state or local codes that are applicable to this evaluation, they are listed here:

8.4.1. No known variations

8.5. This TER uses professional engineering law, the building code, ANSI/ASTM consensus standards and generally accepted engineering practice as its criteria for all testing and engineering analysis. DrJ’s professional engineering work falls under the jurisdiction of each state Board of Professional Engineers, when signed and sealed.

9. Conditions of Use:

9.1. Where required by the authority having jurisdiction (AHJ) in which the project is to be constructed, this TER and the installation instructions shall be submitted at the time of permit application.

9.2. Any generally accepted engineering calculations needed to show compliance with this TER shall be submitted to the code official for review and approval.

9.3. Design loads shall be determined in accordance with the building code adopted by the jurisdiction in which the project is to be constructed.

9.4. Calculations showing compliance with this TER must be submitted to the code official. The calculations must be prepared by a RDP.

9.5. Design

9.5.1. Building Designer Responsibility

9.5.1.1. Unless the AHJ allows otherwise, the Construction Documents shall be prepared by a Building Designer for the Building and shall be in accordance with IRC Section R106 and IBC Section 107.

9.5.1.2. The Construction Documents shall be accurate and reliable and shall provide the location, direction and magnitude of all applied loads and shall be in accordance with IRC Section R301 and IBC Section 1603.
9.5.2. Construction Documents

9.5.2.1. Construction Documents shall be submitted to the Building Official for approval and shall contain the plans, specifications and details needed for the Building Official to approve such documents.

9.6. Responsibilities

9.6.1. The information contained herein is a product, material, detail, design and/or application TER evaluated in accordance with the referenced building codes, testing and/or analysis through the use of accepted engineering practice, experience and technical judgment.

9.6.2. DrJ TERs provide an assessment of only those attributes specifically addressed in the Products Evaluated or Code Compliance Process Evaluated sections.

9.6.3. The engineering evaluation was performed on the dates provided in this TER, within DrJ's professional scope of work.

9.6.4. This product is manufactured under a third-party quality control program in accordance with IRC Section R104.4 and R109.2 and IBC Section 104.4 and 110.4.

9.6.5. The actual design, suitability and use of this TER, for any particular building, is the responsibility of the Owner or the Owner's authorized agent, and the TER shall be reviewed for code compliance by the Building Official.

9.6.6. The use of this TER is dependent on the manufacturer’s in-plant QC, the ISO/IEC 17020 third-party quality assurance program and procedures, proper installation per the manufacturer’s instructions, the Building Official’s inspection and any other code requirements that may apply to demonstrate and verify compliance with the applicable building code.

10. Identification:

10.1 The QuickTie™ products described in this TER are identified by a label bearing the manufacturer’s name, product name, label of the third-party inspection agency, and other information to confirm code compliance.

10.2 Additional technical information can be found at quicktieproducts.com.

11. Review Schedule:

11.1 This TER is subject to periodic review and revision. For the most recent version of this TER, visit drjcertification.org.

11.2 For information on the current status of this TER, contact DrJ Certification.
